Relational Database Archiving and Reuse Tools

Database Preservation Toolkit (DBPTK) allows conversion between Database formats, including connection to live systems, for the purposes of digitally preserving databases. The toolkit allows conversion of live or backed-up databases into preservation formats such as SIARD 2.0, a XML-based format created for the purpose of database preservation. The toolkit also allows uploading of the archived database into a live DBMS (such as Oracle, MySQL, etc).

dbptk-gui-backend is a RESTful service designed to provide a graphical user interface for controlling the DBPTK.

Database Visualisation Toolkit is a relational database viewer that allows access to databases preserved in the SIARD 2.0 database format.
