German Auctioning of Emission Allowances

The German auctions of the third trading period are held weekly on the European Energy Exchange (EEX) spot market. The German Emissions Trading Authority (DEHSt) at the German Environment Agency is the competent authority for the German auctions. Further updated information on the third trading period auctions can be downloaded from the [EEX website](https://www.e-exchange.com). Reports on the second and third trading period auction results are available on the [DEHSt auction website](https://www.dehst.de). The 2018 auction calendar is published on the [EEX website](https://www.e-exchange.com).

The following tables summarise the key data of the German auctions on the EEX in 2018:

| 2018 |
|-----------------|-----------------|
| **Auction product** | Third trading period **EUA spot contracts** | Third trading period **EUAA spot contracts** |
| **Period** | 12/01/2018 to 14/12/2018 | 10/10/2018 |
| **Auction volume entire year** | 194,027,000 EUA | 800,500 EUAA |
| **Auction volume per auction** | 4,360,000 EUA (2,180,000 EUA in August) | 800,500 EUAA on 10/10/2018 |
| **Auction frequency** | Weekly (Fridays, 09:00 to 11:00 a.m. CET) | On 10/10/2018 (13:00 to 15:00 a.m. CET) |
| **Bid volume** | 500 EUA/EUAA |
| **Auction mode** | Single-round, uniform-price procedure with a closed order book |

1 Current Developments

EEX has published the 2018 auction calendar for aviation allowances

Upon consultation with the European Commission, the participating Member States and the German Emissions Trading Authority (DEHSI), the European Energy Exchange (EEX) has published on 07/05/2018 the 2018 auction calendar for the auctioning of aviation allowances (EUAA).

The auction on the German platform will take place on Wednesday, 10/10/2018 from 01:00 p.m. to 03:00 p.m. (CET). EEX will auction on behalf of the Federal Republic of Germany a total volume of 800,500 EUAA on the spot market. Please see the EEX [auction calendar 2018](https://www.e-exchange.com) for detailed information on all auction dates of emission allowances (EUA) and aviation allowances (EUAA).
2 Overview

2.1 April 2018

In April, four auctions of emission allowances (EUA) of the third trading period were successfully carried out for Germany at the EEX.

Overall about 17 million EUA with a total value of over €230 million were auctioned. This results in a volume-weighted average price per allowance of €13.20 (+19 percent compared to the previous month). Thus, this was the highest monthly average price since June 2011. In addition, the highest monthly revenue since the start of sales/auctioning in 2008 was achieved in April. The deviations of the clearing prices from the current prices on the lead market fluctuated between -0.99 and +0.88 percent (see also Section 4.3).

Overall, valid bids totalling about 29 million allowances were entered into trading system across the four EUA-auction dates. Thus the average cover ratio in the reporting period was 1.68 (see also Section 3.2). The average participation number of 25 bidders was above the level of the previous month (24). This also applies to the average number of 20 (18) successful bidders (see also Section 3.1).

The following table gives an overview of the most important auction figures from the EUA-auctions performed during the reporting period.

2.2 Overview of the entire year 2018

In the first four months of the current year a total of about 65 million EUA with a total value of over €696 million were auctioned at the EEX for Germany. This results in a volume-weighted average price per allowance of €10.65.

The amount of emission allowances to be auctioned by Germany in 2018 totals about 194 million EUA. Taking into account the total annual amount, about 34 percent of the EUA-auction budget for 2018 has been auctioned to date.

The following table summarises the auction results on a monthly basis.

* Average
3  Bidder Participation

3.1  Participation

The number of participants in the German EUA-auctions in April averaged across all dates was about 25 bidders. The average number of successful bidders was 20. Participation in the auctions fluctuated between 23 and 26 bidders during the reporting period. The number of successful participants ranged from 18 to 21. There was no such auction where all participating bidders were successful.

The following figure illustrates EUA-auction participation over time.

---

**Figure 1: Number of participating and successful bidders per auction date (EUA)**

By the end of April 2018, a total of 75 trading members of EEX had been authorized to submit bids in the primary market auctions. In April, a total of 29 different bidders were successful in the German primary market auctions. Out of the 29 of those bidders, 17 were operators (i.e. companies of ETS covered installations), which accounts for about 59 percent of all successful bidders.\(^1\) Overall, operators purchased approximately 55 percent of the auctioned volumes in April 2018. In the months of the preceding year, the operators’ share of the purchased auction volumes fluctuated significantly more than the proportion of successful bidders. Nonetheless, average values of both ratios in the past 12 months stayed very close together (around 60 percent respectively).

The following figure illustrates the development of the proportion of operators among the successful bidders as well as of the purchased auction volumes in the past 12 months before the current reporting month.

---

\(^1\) Pursuant to Art. 18 of the EU Auctioning Regulation bidding categories eligible to take part in the auctions at EEX are amongst others (stationary and aircraft) operators, credit institutions, investment firms and business groupings.
Figure 2: Share of operators among successful bidders and purchased auction volumes over the past 12 months (EUA)

### 3.2 Volume Demand

During the reporting period, the aggregated bid volumes per auction date fluctuated from 6.1 to 8.2 million allowances. Overall, valid bids totalling about 29 million allowances were entered into trading system in April. The resulting cover ratios during the reporting period ranged between 1.41 and 1.88 (1.68 on average).

The figure below summarises the results for each EUA-auction date.
Figure 3: Number of participating and successful bidders per auction date (EUA)

Thus, the average bid volume per EUA-auction participant in April was about 300,000 allowances. The average volume awarded to each successful bidder was about 220,000 allowances.

Awarding allowances at all auctions is based on the EU-wide applicable uniform price procedure with one prescribed round of bidding (also see Info box below).

Info Box: Uniform Price Auction at the EEX

The auctions at the EEX follow the uniform price procedure which is common practice throughout the European Union. It involves one round of bidding and a closed order book. This simple and robust procedure protects against market manipulation and was used already for German auctions during the second trading period. The uniform price procedure means that all successful bidders pay the same price. The auction clearing price is determined by ranking all eligible bids, beginning with the highest bid, according to the bidding price.

In the event of equal bids, the bids are sorted by a random process. The bid volumes are aggregated starting with the highest bid until the volume of emission allowances on offer (e.g. 4.36 million EUA) is reached. The bid price at which the aggregate volume of bids reaches or exceeds the offered volume of auctioned allowances determines the auction clearing price.

Bidders will thus be awarded their bid volume if their bidding price at least matches the auction clearing price. If a bid matches the clearing price exactly, the bidder may be awarded the remaining allowances which may be below the volume requested, depending on the bidding situation. If the bid from several participants matches the auction clearing price exactly, the above-mentioned random process applies.
4  Auctions and the Secondary Market

4.1  Trading Volume EUA

In April 2018, a total of about 17 million EUA were auctioned at the EEX for Germany. During the reporting period, the cumulative trading volume in the relevant total market was about 954 million EUA. This comprises the monthly data of the London Energy Brokers’ Association (LEBA) on OTC (see also Figure 6). The inclusion of this data allows for a more complete picture of the entire market volume in EUA trades.

The secondary market trading volume of 865 million EUA was divided into approximately 641 million EUA on the cleared futures market, some 63 million EUA on the cleared spot market and about 160 million EUA bilaterally settled through the LEBA-Brokers (OTC). Overall, the secondary market trading volume in April reached its highest level since March 2014.

In April 2018, a total of about 89 million allowances were auctioned by Member States on the primary market as spot contracts. With respect to the relevant total market for EUA, around 9.3 percent of the traded volume was related to auctions.

The figure below illustrates the trading volumes separately for different market segments based on calendar weeks (CW). In this weekly view, the LEBA data are not included as they are only published on a monthly basis.

---

Figure 4: Trading volumes on the primary and secondary market in April 2018 (EUA)

---

2 All emission allowances (EUA) of the third trading period traded on the spot and futures markets on the ICE/ECX, EEX, CME/NYMEX and Nasdaq OMX exchanges are considered. Transactions completed directly on the stock exchange (screen traded) or those bilateral transactions that at least used the stock exchange clearing mechanism are included. The EUA spot contracts auctioned in April 2018 are also considered. As far as data on OTC volumes from bilateral trading activity (i.e. off-exchange) is available, it is included in the analysis. Option contracts are not involved.

3 LEBA is an association of large brokerage firms active in the trading of energy commodities (including EUA). Their monthly volume reports also include bilaterally settled contracts that were not registered on clearing platforms. The data are not broken down into futures-/spot-contracts. Moreover, since the volumes are only available as monthly aggregated values, the data were taken into account only in Figure 6, but not in Figure 4.
Figure 5 shows the auction volumes on the primary market per calendar week (CW). In addition to the German auctions, auction volumes of other EU Member States are also included in the figure.

![Auction volumes on the primary market in April 2018 (EUA)](chart)

**Figure 5: Auction volumes on the primary market in April 2018 (EUA)**

The following chart shows the development of the monthly EUA trading volumes on the primary and secondary market over the past 12 months before the current reporting month. In the first four months of the current year, the total market volume of 3.05 billion EUA was about 43 percent above the previous year’s figure (Jan-Apr 2017: 2.1 billion EUA). With a volume of around 160 million EUA (market share 16.8 percent), the bilateral transactions (OTC) settled through the LEBA members reached a new record level (see also Table 3).

4.2 Trading Volume EUAA

In April 2018, 1.3 million aviation allowances (EUAA) were traded on the secondary market.\(^4\) During the reporting period, no EUAA were auctioned by the EU Member States on the primary market. Further information on the EUAA auction calendars is available on the website of the European Commission.

4.3 Clearing Prices and Price Development on the Secondary Market

Reference prices from the most liquid trading venues served as appropriate benchmarks for evaluating the auction clearing prices achieved on the EUA-spot auctions. The reference contract for the auctions is the daily future traded on the London ICE or the EEX EUA spot contract. The product specifications are comparable with the spot-product of the auctions. The trade price immediately before the end of the bidding period was used as a reference price. If no trades take place immediately before the end of the bidding period, the last best bid was used as a reference price (see also Info box below).

Table 4 shows the relative deviations of the auction clearing price from the secondary market. The deviation on each EUA-auction date just before the end of the bidding period (11 a.m. CET) varied over the reporting period between €-0.13 (-0.99 percent) and €+0.11 (+0.88 percent).

For a mean value analysis, the arithmetic mean of the absolute values of individual deviations over the reporting period is calculated. The average deviation from the last best bid was €0.10 or 0.76 percent averaged over all dates.

* best bid ICE Daily Future

\(^4\) All aviation allowances (EUAA) of the third trading period traded on the spot and futures markets on the ICE/ECX and EEX exchanges are considered. Transactions completed directly on the stock exchange (screen traded) or those bilateral transactions that at least used the stock exchange clearing mechanism are included.
The following figure shows an overview of the price development for emission allowances in the London lead market. In addition to the daily futures the development of futures for December delivery of the current and the following year is also shown (so-called „front-december future“). Rather than following the common practice of considering only settlement prices, our analysis takes into account all trades completed at the exchanges during the reporting period. The following graphic is based on volume-weighted average trading prices (VWAP), which fluctuated in an interval between around € 12.70 to € 14 in April 2018. On 16/04/2018, the highest value since June 2011 was reached.

Figure 7: ICE secondary market prices and EEX auction clearing prices (EUA)

| Source: ICE, EEX, Thomson Reuters Eikon, DEHSt |
| DE = Germany |

5 ICE EUA Dec18 contract expires on 17/12/2018.
6 Settlement prices are determined by the exchanges at the end of the trading day. Hence, they only reflect trade activity immediately before closure of the exchange and are, thus, not always an adequate reflection of the prevailing intra-day prices in the secondary market.
7 The volume-weighted average prices (VWAP) for the ICE EUA front-december future and the ICE daily future contract is based on data from Thomson Reuters Eikon.
5 Implementation of Valid Regulations

5.1 Surveillance Report by HÜSt

In order to guarantee above-board market activities are free of manipulation on the EEX continuous surveillance is conducted by an independent Market Surveillance Office (Handelsüberwachungsstelle, HÜSt) as required under German law. HÜSt reports to the DEHSt on the results of its surveillance activities through regular internal reports. HÜSt reported on auctions in April 2018 as follows (excerpt):

“Within their surveillance for the auctioning of emission allowances on behalf of the German Environment Agency at the EEX in April 2018 the Market Surveillance Office of the EEX could not detect any irregularities and especially no behaviour of bidders that was targeted at manipulating the auction price.”

5.2 Fair and Open Access

The implementation of the provisions of the EU Auctioning Regulation guarantees a fair and open access for all auction participants at EEX. Current access options can be found at EEX Website (Access).

More information about the auction process is also available on the EEX auction hotline. EEX can be reached by phone from Mondays to Fridays from 8:00 a.m. to 6:00 p.m. CET at +49 341 2156-331 or by e-mail at auctions@eex.com.

5.3 Auction Result Publication

All auction results and accompanying data were made publicly available during the reporting period within a 15-minute time window directly linked to the respective auction at EEX Website.

5.4 Other Events

There are no matters relating to the implementation of the existing rules to be reported during the reporting period. The current regulations can be downloaded from EEX Website (Regulations).
