Country fact sheet: Italy

1. Total greenhouse gas emissions

**Figure 2:** Share of emissions covered by the ETS and the ESD (2017).

---

2. Excluding international aviation, CO₂ from domestic aviation and NF₃.
2. ETS emissions

Figure 3: ETS emissions 2005-2018 (Mt CO$_2$-eq).\(^3\)

3. Emissions in Effort Sharing sectors

Figure 4: Left hand side: Emissions and targets under the Effort Sharing Decision/ Effort Sharing Regulation 2018, 2020 and 2030 as percentage change from 2005. Right hand side: Emissions, annual emission allocations (AEAs) and accumulated surplus/ deficit of AEAs under the Effort Sharing Decision 2013-2020 (Mt CO$_2$-eq).

\(^3\) The scope of ETS was extended from 2013. To reflect the current scope of ETS, estimates made by EEA are included in the figures from 2005 to 2012. The estimates cover only emissions from stationary installations.
4. Land use, land use change and forestry

Reported quantities under the Kyoto Protocol for Italy show net removals of, on average, -33.4 Mt CO\textsubscript{2}-eq for the period 2013 to 2017. In this regard, Italy contributes with 8.1\% to the annual average sink of -411.9 Mt CO\textsubscript{2}-eq of the EU-28. Accounting for the same period depicts net credits of, on average, -9.4 Mt CO\textsubscript{2}-eq, which corresponds to 8.4\% of the EU-28 accounted sink of -111.9 Mt CO\textsubscript{2}-eq. Reported net removals show minor increases between 2013 and 2015 followed by a decrease for 2016 and a sharp decline in 2017. This drop in reported removals translates into net debits for year 2017, which makes Italy one of ten EU Member States with accounted debits in at least one year in this preliminary accounting exercise. Italy elected to report and account for Cropland Management as one of seven EU Member States and Grazing Land Management as one of six EU Member States.

Dominating reported quantities are removals by Forest Management followed by moderate removals by Afforestation/Reforestation and small emissions by Deforestation. The reported removals quantities by Forest Management dropped by more than 50\% in year 2017. Emissions and removals by Grazing Land Management and Cropland Management are negligible and vary around zero. Removals by Afforestation/Reforestation showed stable levels between 2013 and 2016 followed by a moderate drop in 2017.

Credits by Afforestation/Reforestation are the biggest category in the preliminary accounting exercise for the period 2013 to 2016, followed by credits by Forest Management. This changed in year 2017 when debits by Forest Management became the dominant category. Italy is one of twelve Member States with debits by Forest Management in at least one year of the observed period. Debits by Deforestation are still comparatively significant and remain stable throughout the period. Cropland Management and Grazing land management debits and credits oscillate around zero.

---

4The differences between reported and accounted emissions from LULUCF under the Kyoto Protocol are described in the ’explanatory note on LULUCF – accounted and reported quantities under the Kyoto Protocol’.
