Country fact sheet: Poland

1. Total greenhouse gas emissions

Figure 1: Left hand side: Total greenhouse gas emissions (excl. international aviation) 1990-2018 (index 1990 = 100%). Right hand side: Greenhouse gas emissions by sector\(^1\) – historical emissions 1990-2017, projections 2018-2030 (Mt CO\(_2\)-eq).

Figure 2: Share of emissions covered by the ETS and the ESD (2017).\(^2\)

---

\(^1\) The sectors in the figure correspond to the following IPCC sectors: Energy supply: 1A1, 1B and 1C. Energy use in manufacturing industries: 1A2. Industrial processes and product use: 2. Transport: 1A3. Other energy use: 1A4, 1A5 and 6. Agriculture: 3. Waste: 5. International aviation: memo item.

\(^2\) Excluding international aviation, CO\(_2\) from domestic aviation and NF\(_3\).
2. ETS emissions

![ETS emissions in Poland](image)

Figure 3: ETS emissions 2005-2018 (Mt CO$_2$-eq).³

3. Emissions in Effort Sharing sectors

![Figure 4: Left hand side: Emissions and targets under the Effort Sharing Decision/ Effort Sharing Regulation 2018, 2020 and 2030 as percentage change from 2005. Right hand side: Emissions, annual emission allocations (AEAs) and accumulated surplus/ deficit of AEAs under the Effort Sharing Decision 2013-2020 (Mt CO$_2$-eq).](image)

³ The scope of ETS was extended from 2013. To reflect the current scope of ETS, estimates made by EEA are included in the figures from 2005 to 2012. The estimates cover only emissions from stationary installations.
4. Land use, land use change and forestry

Reported quantities under the Kyoto Protocol for Poland show net removals of, on average, -38.7 Mt CO₂-eq for the period 2013 to 2017. In this regard, Poland contributes with 9.4% to the annual average sink of -411.9 Mt CO₂-eq of the EU-28. Accounting for the same period depicts net credits of, on average, -11.6 Mt CO₂-eq, which corresponds to 10.3% of the EU-28 accounted sink of -111.9 Mt CO₂-eq. Reported net removals and accounted net credits decrease between 2013 and 2015 and show a reverse trend thereafter.

Dominating reported quantities are removals by Forest Management, which decrease between 2013 and 2015 and increase for 2016 and 2017. Removals by Afforestation/Reforestation make up a minor part of the emission budget of the LULUCF sector. In 2016, emissions by Deforestation show a singular increase from previously nearly zero to 5.5 Mt CO₂-eq.

Credits by Forest Management are the biggest accounting quantity that decrease between 2013 and 2015 and increase again thereafter. Credits by Afforestation/Reforestation are moderate and with nearly no change over the five-year period. The sudden increase in debits by Deforestation in 2015 mitigates the increase in credits by Forest Management for that year.

---

4 The differences between reported and accounted emissions from LULUCF under the Kyoto Protocol are described in the ‘explanatory note on LULUCF – accounted and reported quantities under the Kyoto Protocol’.
