EUROPEAN COMPETITION DAY
LISBON, JUNE 9th 2000

Following a proposal of Commissioner Monti, a European Competition Day will be organised in Lisbon, on June 9th. This event is dedicated to the citizens of the European Union who are not really aware of the positive impact of European competition policy on their day-to-day life.

The Conference will take place in:
Forum Telecom
Av. Fontes Pereira de Melo 38c
1050 Lisbon

For more information, please contact:
European Commission-DG Comp
Directorate A - Unit A1
Mr. Eric Cuziat (tel: 32 2 295 77 62)

Mr. A. Bangy (21/ 791 92 62)

JOURNEE EUROPÉENNE DE LA CONCURRENCE
LISBONNE, LE 9 JUIN 2000

A la suite d’une proposition du Commissaire Monti, une Journée européenne de la concurrence sera organisée le 9 juin à Lisbonne. Cet événement est destiné aux citoyens de l’Union européenne qui n’ont pas toujours conscience des incidences positives de la politique européenne de concurrence sur leur vie quotidienne.

La conférence se tiendra:
Forum Telecom
Av. Fontes Pereira de Melo 38c
1050 Lisbonne

The case TotalFina / Elf Aquitaine: preserving a contestable and competitive market in an industry that is of a particularly sensitive nature to the consumer

By Alexander SCHAUB, Director General, Claude RAKOVSKY, Henri PIFFAUT and Peter DE LUYCK, DG COMP-B-1

On 24 August 1999 the Commission was notified of the proposed acquisition by TotalFina of Elf Aquitaine. These two companies are the French national players in the oil industry. This transaction gave birth to the world’s fourth-largest oil group valued at around € 101 billion. After a full investigation, the Commission adopted on 9 February 2000 a clearance decision conditional on the realisation of various divestitures in France.

TotalFina’s public takeover bid was initially hostile and triggered a counter offer by Elf Aquitaine. This created the unprecedented situation of two competing notifications. Elf eventually recommended TotalFina’s offer and the transaction was successfully completed in the Autumn. Both groups carry out their principal activities in the sectors of exploration and production of petroleum and natural gas, refining, distribution of petroleum products, petrochemicals, speciality chemicals and in the case of Elf, healthcare.

On 6 October 1999, the Commission announced its intention to initiate a detailed investigation of the proposed operation.

The Commission’s investigation revealed a number of serious competition problems, firstly on the wholesale markets for motor fuels and heating oil, secondly on the retail market for the sale of motor fuels on motorways, thirdly on the liquefied petroleum gas market (LPG) and lastly on the market for Aviation fuel sales at the Lyon and Toulouse airports.

The wholesale market. One of the main peculiarities of the French motor fuel market has been the emergence, over the last decade, of the hyper- and supermarket chains as major retailers, accounting today together for 52% of total sales. This has led to price-levels (before taxes) among the lowest within the EU. However, retail chains are only resellers and they must procure fuels from the integrated refiners who are also their competitors on the retail market. Prior to the concentration this situation was not problematic as refiners were themselves in competition on the wholesale market and for the provision of logistic services. In fact competition existed at the wholesale level firstly between the refiners based in France and secondly because of European-wide over-capacities in the refining industry that made possible the import of refined products. It could however only take place because of the ability of the resellers to access the logistics necessary to import, stock and transport refined products...

The Commission found that the concentration between TotalFina and Elf would have put in jeopardy every element of the competitive balance of these markets. The notified transaction would have put an end to the rivalry between the two main national refiners (TotalFina and Elf) and would have placed in their hands 55% of the refining capacities (and an equivalent market share on the wholesale market), control over a majority of the French import terminals, control over the three principal pipelines supplying French territory and over a substantial part of the local terminals. This combination would have conferred on TotalFina/Elf a substantial market power on the wholesale market that could not be contested either by demand (supermarkets or large final customers) or by competing refiners or even by imports. It would have, in turn, allowed TotalFina/Elf to contain any...
competitive pressure on the retail market from the retail chains and, ultimately, to increase retail prices for motor fuels and domestic heating oil.

In order to obtain the agreement of the Commission to their proposed concentration, TotalFina has therefore committed to divest the majority of the assets of the new combined entity in logistics. These divestments, if fully complied with, will open facilities for importing, storing and transporting refined products on French territory. In fact, only such a significant opening of the infrastructure could enable third parties to contest efficiently TotalFina/Elf's market power through recourse to imports and to independent transport and storage facilities.

In practice, TotalFina gives up all presence it has or abandons its control positions in the majority of French import terminals, and in particular in those that supply the major pipeline systems supplying French territory. Moreover, TotalFina/Elf will keep only minority shares in the two principal French pipeline systems and completely withdraw from the third pipeline system as well as from all adjacent terminals. Finally a number of inland terminals (terminals located in the most important urban areas) will be divested.

The opening of the logistics, up to now dominated by the major refiners, was considered sufficient to allow the maintenance of the competitive conditions on the retail market and will have a dissuasive effect on those refiners who would be tempted to raise prices for motor fuel and domestic heating oil.

Motorways. The Commission also found that the merger would eliminate competition in the market for retailing motor fuel on the French motorways. As the Commission had already noted in previous cases (the Total/Fina and Exxon/Mobil case), motor fuel sales on the motorways constitute a separate market with prices being significantly higher than prices charged off-motorways. The supermarkets are almost absent from this market, which was essentially shared between five operators, all being integrated refiners. The investigation conducted by the Commission has shown that competition, already reduced before the TotalFina/Elf concentration, would be nearly eliminated as the combined entity would hold almost two thirds of the market.

TotalFina proposed to divest 70 service stations, a figure roughly corresponding to Elf’s motorway network, bringing the total down to 144. The elimination of the overlap was considered by the Commission as necessary to preserve the free choice of the motorists, and as the only means of preserving effective competition on a market characterised by partially captive customers.

LPG. Liquefied petroleum gas (LPG) is used by households for cooking and heating as well as by industry. The market was already very concentrated prior to the concentration. In fact, the four principal operators hold between 20 and 28% of market shares each, and two smaller competitors are linked with TotalFina and Elf through participation or joint venture.

The investigation of the Commission revealed that, post concentration, the new entity would acquire a dominant position on the market and would control an important part of the import logistics, storage and bottling infrastructure (for conditioned LPG), all of which would guarantee the new entity full autonomy throughout French territory, freeing it from dependency on infrastructure-access exchanges with its competitors. As the French LPG logistics situation is tense, it would be difficult for competitors to increase supply if the dominant group should increase its prices. In such a scenario, competitors of TotalFina / Elf would then follow the market leader rather than risk a confrontation.

TotalFina proposed the divestment of Elf Antargaz, the second actor on the LPG market in France. This eliminates the overlap between TotalFina and Elf. Also in this market, the implementation of the commitments will allow the maintenance of an accessible and competitive market in an
economic sector that is of a particularly sensitive nature for consumers.

**Airports.** Finally, the Commission raised concerns that the new entity would have the possibility to foreclose the supply of aviation fuels at the Lyon and Toulouse airports as the operation would concentrate the essential infrastructure in the hands of the merging parties. The Commission found that each of these two airports, which rank respectively as the third and fourth French airports, constituted substantial parts of the Common market. Indeed, they ensure an extended geographical cover of important urban and industrial areas as well as isolated regions. Moreover, Lyon–Satolas and Toulouse–Blagnac are both on the list of airports for priority liberalisation under the directive on groundhandling services.¹ Under this directive, the Commission publishes four lists of airports covered by the liberalisation requirements laid down in it.

TotalFina committed itself to divest the 50% share acquired from Elf in the supply of these two airports.

**Conclusion**

The review of this transaction was of a particular importance for at least two reasons. First, the markets (motor fuel, energy sources, etc.) where the notified operation led to competition problems are vital in the daily life of most individuals. Second, this case illustrates the approach followed by the Commission where national majors are liable to combine to form a national champion. Such operations may result in the partitioning of the common market. In such circumstances, the Commission has to ensure the elimination of the activity overlaps (as the case for fuel retail on motorways, LPG and aviation fuel sales) and of all the bottlenecks that could enable the new entity to foreclose the market to its profit (control of the import logistics, transport and distribution of refined petroleum products).

Nordic Satellite Cases

By Andrew HOBBS,DG COMP-C-2

During the later part of 1998 and most of 1999 the Commission examined a series of notifications involving agreements relating to satellite transponder capacity in the Nordic region. As well as raising issues in their own right, these cases were of particular interest because of their connections to two merger cases, Telia/Telenor and NSD.

The first of these merger cases involved the combination of Telenor, the leading supplier of satellite transponder capacity in the Nordic region and a shareholder in a Nordic pay-TV operator, and Telia. Telia controls a major cable operator and leases a significant amount of transponder capacity from NSAB, the only other operator in the Nordic region. The examination of the merger benefited from the knowledge of the market gained by examining the notifications, in particular on market power in relation to satellite transponder capacity and the structure of pay-TV operations in the Nordic region.

The second merger case, NSD, related to various parties involved in the provision of pay-TV. It was prohibited by the Commission in 1995. The joint venture would have foreclosed the market for satellite transponder capacity in the Nordic region, as well as having an anti-competitive impact on pay-TV, cable-TV operators and the related markets for technological and administrative services. As NSD and the notifications involved a similar set of parties (a satellite transponder capacity provider, a pay-TV operator and a cable TV operator) and markets, it was considered whether the agreements constituted an attempt to replicate what that Decision had prohibited. Accordingly the agreements were considered collectively and a Notice was published in the Official Journal to see if any third parties had made similar connections.

All the notifications involved NSAB, or its parents. NSAB owns and operates satellites, primarily providing transponder capacity for broadcasting services to the Nordic and Baltic regions. It is owned by two state-owned Swedish companies, SSC and Teracom, and Tele Danmark, Denmark’s largest cable-TV operator.

The first concern was to ensure that there was no collusion between existing Nordic satellite operators, NSAB and Telenor, or restriction on potential new entrants. Co-operation with Telenor to promote the sales of a dual-antenna capable of receiving from both NSAB and Telenor satellites, as well as agreements with SES (the operator of the Astra satellites) to lease an NSAB satellite and the GECSI (a satellite builder) to jointly finance a new satellite, were examined. It was found that there was no restriction of competition.

The next concern was with competition between parents of NSAB, in particular whether Tele Danmark could have provided its own satellite capacity and whether the limits placed on the parents use of NSAB’s transponder capacity were a form of market sharing. The later was of particular

---

2 The 1999 cases were: Case No. IV/35.650 – NSAB, Kinnevik and Tele Danmark transponder lease agreement; Case No. IV/C-2/36.517 – NSAB, MTG, MTV Europe, Sci Fi Channel Europe LLC, and Nickelodeon International Ltd; Case No. IV/36.895 Tele Danmark and Canal Digital; Case No. IV/C-2/37.303 – NSAB and SES Sirius 3 lease; Case No. IV/C-2/37.406 – NSAB, Terracom, SSC and Tele Danmark operations agreement; and, Case No. IV/C-2/37.517 – NSAB and SVT. Two related cases with in 1998 were: Case No. IV/35.891 - NSAB+GECSI: Transponder Purchase Agreement; and, Case No. IV/36.150 - NSAB and Telenor Joint Marketing Agreement.

3 Case No M.1439 – Telia/Telenor, 13/10/99

4 Case IV/M490 Nordic Satellite Distribution, Official Journal L053, 02/03/96, page 20.

5 Official Journal C168 16/06/99, page 9
concern as it involved unfamiliar markets and led to the publication of the Notice in the Official Journal.

Another issue involved NSAB’s agreements with broadcasters (SVT) and pay-TV operators (MTG/Viasat). It was necessary to ensure they were neither tied to NSAB, or in a position where they controlled sufficient transponder capacity to deny access to other customers. This is particularly of concern when, as is the case in the Nordic region, there are only two satellite operators and two pay-TV operators in the relevant markets. In such a market there must be strong justification for any exclusivity.

Finally, in relation to an issue raised in NSD, it was considered whether any party could use control of transponder capacity to impose a proprietary conditional access and encryption system on broadcasters, pay-TV operators and cable television operators. Again this issue warranted the publication of a Notice in the Official Journal.

The conclusion of the examination was that, despite the similarities, the agreements did not replicate NSD. Having examined the notifications on an individual basis as well they all received comfort letters.
Who can be the beneficiary of a State aid?

By Ben SLOCOCK, DG COMP-G-1

The title of this article is deliberately ambiguous: it can mean at the same time: “who is entitled to benefit from a state aid?” and also “for a given state aid, who can be said to be a beneficiary for the purpose of assessing its compatibility with the Treaty and for deciding the consequences if the aid is incompatible?”

This article identifies a number of linked issues which arise in answering these questions in the exercise of the Commission’s state aid control under articles 87-89 EC, and signals some recent developments. The article does not attempt to list all cases in which these issues arise or to provide a definitive analysis. However, it will argue that a coherent picture is emerging on the Commission’s view of such issues.

The assumption of a single beneficiary

State aid analysis traditionally operates on the assumption that a given individual grant of aid has a single beneficiary, which is, crudely put, the name to whom the cheque is made out. There is of course an element of fiction in the implied belief that only this enterprise enjoys the benefit of the aid. In most cases not only this enterprise but also its shareholders, suppliers, creditors, clients and employees may be better off as a result of the aid than they would have been without it. However, the assumption of a single beneficiary is entirely defensible as a means of carrying out state aid control in a manageable way. It is also fair to say that distortion of competition, at least in the markets of suppliers and clients, is likely to be limited, on the assumption that these markets are open (in particular because their competitors always have the option to trade with the aid beneficiary)6.

6 In some recent decisions, the Commission found that an analysis on the assumption that there was a single beneficiary, namely the direct recipient of the advantage conferred by the Member State, could not adequately assess the measure’s distortive effect. This is the case where Member States have devised schemes granting incentives to one set of economic operators to provide finance, services, premises etc to another set. Examples are section 52(8) of the German Income Taxes Act (OJ L 212/50 of 30.7.1998) and the Partnerships Investment Programme of English Partnerships (Case C 39/99, decision of 22 December 1999, not yet published). Such measures, often described as public/private partnerships, present their own difficulties in terms of state aid control. They are not however the subject of this article.

However, although it is usually reasonable to regard a measure as having a single beneficiary, the question can arise what is actually the precise meaning of the term. Is it the legal person? Is it the economic activity? What if one or both of these has disappeared or changed ownership?

New guidelines on rescue and restructuring aid

Such issues often arise in the analysis of state aid granted to restructure a company in difficulty. In the recent revision of the relevant guidelines covering such aid7, the Commission clarified its position on two points. Firstly, it observed that the justification for accepting such aid is to allow a potentially viable enterprise to rid itself of the “weight of the past”. It concluded from this that a new enterprise could not be eligible for such aid, including in that term an enterprise which emerges from the liquidation of a previous firm or merely takes over a previous firm’s assets. Thus the Commission was effectively saying that the legal entity receiving the aid had to be the same as the one whose difficulties justified public intervention.

This position can be justified in several ways. From an economic point of view, the new enterprise has decided to buy the assets of the old one at a particular price

7 OJ C 288 of 9.10.1999
which will take into account the restructuring costs which will follow. Adding aid simply distorts the market for those assets. It may help the creditors but makes little or no difference to the continuation of the activity in question, which is of course the aim of (and reason for authorising) a restructuring aid. So such aid is likely in any case to fail the necessity test. Against this it can be argued that assets may have a negative value and will not be purchased at all without aid: but then that is a good indication in a market economy that they will never be viable – so another important test applied to such aid is likely not to be met.

From a legal point of view also, the new and old legal entities are entirely separate. Under national insolvency law the new one is rarely if ever responsible for the actions or omissions of the last one, even under special procedures (such as the French system of “reprise après redressement judiciaire”) where the continuation of the activity, rather than the reimbursement of creditors, is the prime objective. If the Commission were to allow restructuring aid in such cases, successive liquidations and aided “Phoenix” companies, keeping alive non-viable operations through the creation of new legal vehicles, would be much more likely.

The Commission was thus identifying the legal entity, rather than the economic activity, as the important concept for the purpose of state aid analysis. It maintained this position in the second point to note in the new guidelines, namely in the application of the newly-introduced “one time last time” rule to successor companies purchasing the assets of previous aid beneficiaries. It indicated that such successor companies would not “inherit” the ban on a second restructuring aid from the previous beneficiary, provided that certain safeguards to prevent abuse were met. These are that the purchaser is clearly separate from the old firm; that the purchaser has acquired the old firm’s assets at market prices; and that the winding-up or court-supervised administration and purchase of the old company are not merely circumvention devices (the Commission could decide that this is the case if, for example, the difficulties encountered by the purchaser were clearly foreseeable when it took over the assets of the old company). These safeguards are referred to further below.

Recovery of incompatible aid from successor companies

When a Member State has granted state aid illegally (ie without Commission authorisation) and the Commission finds this aid to be incompatible with the common market, it normally decides that the Member State must recover the aid. In normal circumstances (ie where the original beneficiary still exists and is continuing its activity) there is no doubt over where recovery should be sought from. However the Commission has been confronted with other circumstances and has had to decide from where recovery should be sought.

An important case in this area is Finmeccanica/Alfa Romeo. The Commission decided in 1989 that capital injections to Alfa Romeo made in 1985 and 1986 through public holding company Finmeccanica were illegal and incompatible state aid. It ordered recovery. In the meantime the main productive assets of Alfa Romeo had been sold to Fiat. The legal entity (Alfa Romeo SpA) which had received the aid initially remained in Finmeccanica’s ownership but had its remaining assets (apart from tax credits) transferred to Finmeccanica and was then sold. It was liquidated in December 1987.

The Commission had to decide from whom the recovery should
be sought. The Commission decided that recovery should be sought from Finmeccanica and not from Fiat, even though the latter was now carrying out the economic activity in respect of which the aid had been granted. This decision was upheld by the ECJ10.

Here too we can see a concentration on the legal entity rather than the economic activity. But the concentration is not total and dogmatic. Strictly speaking the legal entity which had received the aid no longer existed at the time of the Commission decision, having had all its remaining assets transferred to its parent. That being the case the Commission sought recovery from the parent. The point tested by the Court was whether recovery should have been sought from Fiat. Noone contested that recovery was by then impossible because the legal vehicle had ceased to exist.

The Commission has dealt with similar issues more recently. In the Gröditzer decision11 the Commission indicated that recovery should be made from Gröditzer or “any other undertaking to which assets have been transferred in such a way as to deprive paragraph 1 [the recovery decision] of any effect”. The Commission took this unusual step because it had been hinted that the assets of Gröditzer might be transferred to another legal vehicle, in the same ownership, to evade the recovery decision. Thus the Commission saw a possibility that a future operator of the original beneficiary’s assets might be liable to pay recovery. This possibility was also raised in the case of the French shipyards ACH and in the Italian case Seleco.

So would the Commission always “pursue the assets” in order to effect recovery when the original legal entity no longer exists or is not in a position to repay the aid? The answer must be no. The obligation on the Member State is to use all available remedies to recover the aid from the entity which received it. Assuming it is a company, this may extend to forcing the company’s liquidation. Even if the liquidation does not produce enough proceeds to repay the aid in full, this could not in itself justify pursuing any future owner of the assets. Such a liquidation has a significant value in terms of the conditions of competition, since competing undertakings, which may have been harmed by the incompatible state aid, will have the opportunity to fill the market void left and/or to acquire the assets being sold12. (There is also a salutary lesson for creditors and shareholders of the dangers of trading with and owning businesses receiving incompatible state aid.)

The question, then, is where the line is drawn between cases where assets can be pursued and those where they cannot. In all candour the line is not yet precisely defined. A parallel can however be drawn with the safeguard conditions mentioned above in connection with the “one time last time” rule13. One important test is whether the assets are still in the same ultimate ownership, as was the case both in Finmeccanica, in relation to the “remaining assets” of Alfa Romeo, and – potentially – in Gröditzer (cf the “clearly separate” condition above, which is clearly not met by the old and new owners of assets which are in the same ultimate ownership as before)14. Another is whether the transfer of assets was at market conditions. A third is whether the specific aim of the

10 Case C-305/89, judgment of 21 March 1991, I-1-603
11 OJ L 292/27 of 13.11.1999
12 This is true even in the worst case scenario that the liquidation has already happened before the Member State tries to seek recovery in compliance with the Commission decision.
13 The kind of situation which would lead the Commission to pursue the assets can also be compared with national insolvency provisions on fraud on creditors etc.
14 A further interesting example from the world of anti-trust is the case of SAGA Petrokjem which had its assets transferred to, and was then liquidated by, a new parent Statoil between the time of its participation in the polypropylene cartel and the imposition of fines. The Commission imposed the fine on Statoil. See OJ L 230/1 of 18.8.1986, recitals 97ff.
transfer was to frustrate recovery of the aid, though the Commission would probably not feel it necessary to prove this was the case if other tests showed that the recovery decision had, in fact, been deprived of effect. But these may not be exhaustive.

The “pass-through” doctrine

Underlying all this thinking is the view that assets transferred at market conditions between independent economic operators are “cleansed” by the transaction both of the difficulties of their previous owners - assets carry no debts with them - and of any continuing advantage conferred by previous aid (but not if transferred at other conditions).

There is a certain logic in this: it is hard to argue, at least in the majority of cases, that the price of those assets, and therefore the situation of the new owner, would have been lower in the absence of the previous owner’s difficulties or higher in the absence of the state aid. By contrast there is nothing in the arguments and examples above which would suggest that change of ownership of a given legal entity, such as a company, on whatever terms, would affect the assessment that that entity continued to enjoy the benefit of a previous state aid. This different treatment of “asset sales” and “share sales” is further referred to below.

The view that a benefit continues to be enjoyed after a change of ownership, whether of assets or of shares, is known as the “pass-through” doctrine. A version of this doctrine was recently tested in a different context from Community state aid control, namely an appeal to the World Trade Organisation by the Community against imposition by the USA of countervailing duties on certain hot-rolled lead and bismuth carbon steel products from the UK15. In 1992 the USA imposed duties against a company called UES which was previously 50% owned by the public (and subsidised) British Steel Corporation (BSC). BSC established UES in 1986 in association with another company GKN. British Steel plc was the successor of BSC in the sense that the former assumed the property, rights and liabilities of the latter in September 1988.

The UK government privatised British Steel plc in December 1988 through a sale of shares. It was not disputed that the privatisation of British Steel plc was at market conditions. The US found that a portion of the alleged subsidies in question (in the form of capital contributions dating from 1977-1985, which the US allocates over an 18 year period) "passed through" from BSC to UES and remained with UES after privatisation of British Steel plc. The US therefore imposed countervailing duties on imports of leaded bars produced by UES (later renamed BSES) based on that portion of "benefit" from prior subsidies that was deemed to have passed through to UES.

The US argued that the determinative factor is the productive assets, not the owners, citing relevant WTO texts referring to the "subsidy" as being "bestowed, directly or indirectly, upon the manufacture, production or export of" the product. In focusing on the productive assets, the US asserted that the successor firm really is "no different" from the subsidy recipient. Clearly, this is a very different logic from the one which emerges from Community state aid texts and decisions described above, even if the case in question is complicated by the chain of transactions before and after the privatisation, and even if the concepts and aims of WTO disciplines are not directly parallel to those of Community state aid law.

The WTO panel’s finding is an interesting one. Essentially it rejects the pass-through doctrine. It has, however, been appealed by the US (the WTO appellate body is due to report by late April 2000). It finds in the first instance that “fair market value was paid for all productive assets, goodwill etc. employed by UES and BSplc/BSES in the production of leaded bars imported into the United States in 1994, 1995 and 1996” (the period of the measures in question). In these circumstances, the panel failed to see “how pre-1985/86

---

"financial contributions" bestowed on BSC could subsequently be considered to confer a "benefit" on UES and BSplc/BSES during the relevant periods of review”. Thus it can certainly be seen that in the circumstances where the Commission would generally, for state aid purposes, see no transfer of advantage (sale of assets at market conditions between independent economic operators), the WTO panel would also do so.

The panel goes on to make a further statement, in connection with the argument that the privatisation of British Steel on market terms also eliminated any aid effects. The panel said “in our view, it is irrelevant that the aforementioned fair market value was paid by the (new) owners of UES and BSplc/BSES respectively, rather than those companies themselves. Any approach requiring that fair market value be paid by the company itself, rather than its owners, would elevate form over substance. In the context of privatizations negotiated at arm's length, for fair market value, and consistent with commercial principles, the distinction between a company and its owners is redundant for the purpose of establishing "benefit"”.

On this point it can be argued that the panel diverges with Commission practice in state aid cases. As a rule, the Commission does distinguish between a company and its owners. Since quoted companies change their ownership many times a day, it is hard to see how it could be otherwise. There is however established practice in the area of privatisation which suggests that the outcome in this particular case is not divergent. In the Commission’s 23rd (1993) annual competition report the Commission noted that “When the privatisation is effected by the sale of shares on the stock exchange, it is generally assumed to be on market conditions and not to involve aid. Before flotation, debt may be written off or reduced without this giving rise to a presumption of aid as long as the proceeds of the flotation exceed the reduction in debt”. Thus where a business is owned by the state and afterwards sold, debt write-off before the sale – which, without the sale, would certainly be considered to be aid to that enterprise – is no longer held to confer an advantage on the business after it.

Conclusion

The author of this article is not a lawyer (this may already be clear to those who are). As such he tends to dislike the elevation of legal form over economic reality (or “form over substance” as the WTO expressed it). But it is too easy to fall into thinking that economic reality consists of activity, assets, employees while legal entities are mere chimeric constructions. Legal entities, and in particular companies, are in fact collections of economic interests organised in a particular way. There is an economic logic, as well a legal one, in the view that the beneficiary of a state aid should generally be held only to be the legal entity which has received, or is proposed to receive it.

This general view can be seen to be maintained coherently by the Commission in the various examples cited above. The Commission does not, and should not, elevate this view to the level of dogma. Nor is there a strict logical need that this view should apply equally in all instances. It would, for example, be possible to defend a stricter position on the “one time last time” rule – no second aid for the same economic activity using the same assets – while maintaining the same view as now in relation to recovery and eligibility.

There are of course possible objections to the general view. In relation to eligibility for restructuring aid, it can be observed that when an enterprise buys the shares of a company in difficulty then the price will take into account the restructuring costs which will follow just as much as if it had purchased the assets. The crucial difference, however, is that a buyer of shares acquires an enterprise complete with liabilities. It is of course possible to construct an example where, perhaps following a concordat of creditors, an enterprise in difficulty has rid itself of most liabilities and the economic difference between a share and
an asset sale is minimal. But these cases are exceptional if they ever exist in practice at all. The Commission took the view in the new guidelines that the need to avoid abuse through drawing a clear line overrode any potential “hard cases” which could be theoretically imagined.

The general view should certainly not be maintained when it denies state aid decisions of effect (hence the need to retain the possibility of “pursuing assets” in cases of aid recovery, even if the circumstances in which this can be done have not been precisely defined by the Commission). Against this, it can be argued that if the rule is not absolute, or if the exceptions are not clear, there is a lack of legal certainty. However in state aid, legal certainty comes from notification and approval. In the recovery situation it should be remembered that we are by definition dealing with cases of illegality. Some doubt may be unavoidable – absolutely clear rules would need to be extremely complex (and would be an invitation to devise ways to get round them).
Commission approves an agreement to improve energy efficiency of washing machines

By Manuel MARTINEZ LOPEZ, DG COMP-F-1

On 24 January 2000, the Commission adopted an exemption decision16 regarding an agreement notified by the European Council of Domestic Appliance Manufacturers (CECED).

The agreement gathers the principal European producers and importers of washing machines and aims at reducing energy consumption of domestic washing machines thereby reducing polluting emissions from power generation. To achieve this, participants, which hold in excess of 95% of the EC market, will stop producing for and importing into the EU the least energy-efficient machines17. The parties also undertake to achieve a common target of efficiency, promote technology and awareness on environmentally friendly use of machines and monitor implementation with annual reports.

This is the first time that a formal decision of application of Article 81 concerns a horizontal agreement between almost all EC manufacturers and importers aiming at eliminating products which do not meet environmental criteria. It is therefore useful to summarise the criteria set forth in it.

Among the four commitments, only the discontinuation of production and import of certain categories of washing machines is found to fall under Article 81 (1). The three others, in view of their modalities of implementation, are unlikely to appreciably restrict competition and affect trade between Member States.

The commitment to promote information and technology dissemination is formulated in a general way and does not limit the parties’ autonomy of behaviour in the market. The exchange of information takes place in a non oligopolistic market and concerns one year old aggregated data. The contribution to a common efficiency target is formulated in a general way. Since there are no «quotas» on the basis of which individual contributions are allocated, the commitment to contribute to the target is not deemed restrictive.

However, the discontinuation of production and imports of some categories of washing machines covers 10-11% of the machines sold in the EC. These machines amounted to a considerable proportion of the sales of some manufacturers prior to the agreement. Moreover, energy-efficiency is an important purchase criterion, on which manufacturers focus advertising and, therefore, on which competition takes place in the market. Finally, technical improvements may also increase prices in the short run.

Such an agreement between almost all producers and importers in the market falls under the prohibition of Article 81 (1). The decision concludes in respect of Article 81 (3) as follows:

- The agreement objectively contributes to technical and economic progress, by focusing production on more efficient machines. Such benefits would be unlikely or would occur less quickly without the agreement.
- Consumers derive benefits at the same time individually and for society as a whole: likely higher purchase costs of more efficient washing machines are quickly compensated by savings in electricity bills; the agreement contributes to EC environmental objectives and the benefits very largely

---

17 Such machines are labelled under categories D to G, pursuant to Commission Directive 95/12 (EC)
exceed potential cost increases triggered as a result of the agreement. Even if individual purchasers were not to derive the financial benefits that they actually attain, the magnitude of environmental benefits is such that the net contribution to society’s economic welfare would still be positive.

The restrictions of competition are indispensable to attaining those benefits. Consumers do not sufficiently take external costs into account in their purchase decisions. The application of a minimum efficiency ratio mitigates this market failure. Alternatives such as public awareness campaigns or application of ecolabels would be complementary, rather than substitutable to the agreement.

The agreement does not eliminate competition. Various technical means to improve energy efficiency of washing machines are economically available to all manufacturers; competition remains also on important purchase criteria such as prices, technical effectiveness, brand image etc; finally, 90% of sales of washing machines are not directly concerned.

Three additional aspects need to be stressed in connection with the exemption decision. First, the decision illustrates the Treaty principle of integration of environmental concerns in competition policy, taking into account quantitatively the costs and the benefits for the environment\textsuperscript{18}. It also recognises the contribution of initiatives on the part of industry to achieve EC environmental objectives, in particular as regards energy efficiency and reduction of air pollution. Finally, the existence of a de facto minimum energy efficiency ratio renders superfluous legislation in this respect.

The exemption is granted for a short duration, from the date of notification until 31 December 2001, which is the expiry date of the agreement. Thereafter, it will become apparent whether the actual results and effects of the agreement are, on balance, satisfactory.

La Commission inflige des amendes à un cartel de producteurs de tubes d’acier sans soudure pour partage de marchés

Par Ingrid BREIT, DG COMP-E-1 et Francisco PÉREZ FLORES, DG COMP-H-1

(1) Introduction

Le 8 décembre 1999 la Commission a adopté une décision sur base de l’article 81 CE imposant des amendes totalisant 99 millions d’euros à huit producteurs de tubes d’acier sans soudure. Ils se sont concertés jusqu’en 1995 sur le respect de leurs marchés domestiques respectifs en ce qui concerne certains tubes sans soudure destinés à la prospection et au transport de pétrole.

Cette décision s’inscrit dans le cadre de la lutte de la Commission contre les ententes illégales dans le secteur sidérurgique19.

(2) Rappel des faits

(a) Les produits

Les produits ayant fait l’objet du cartel sont les tubes de sondage en acier (communément appelés OCTG) “standard” et les tubes de transport (communément appelés linepipe) “project” qui constituent une partie des tubes utilisés pour le sondage et le transport du pétrole et du gaz.

(b) Les producteurs de tubes d’acier sans soudure concernés

(c) Le fonctionnement du cartel

En vue de coordonner leur comportement sur les marchés des OCTG standard et des linepipe project, les producteurs européens et japonais ont mis sur pied un cartel qu’ils ont appelé le « Club Europe – Japon ».

Ce cartel a restreint la concurrence dans le marché commun en prévoyant le respect des marchés domestiques des différents producteurs (c’est-à-dire les marchés allemand, français, italien, britannique, japonais) dans la mesure où l’offre de tubes sans soudure dans les États de la Communauté où était établi un producteur national a été limitée par l’abstention des autres producteurs parties à l’accord de livrer des tubes sur ces marchés. D’autres volets de l’accord de cartel concernant certains marchés tiers n’ont pas fait l’objet de décision puisque la Commission n’a pas pu apporter la preuve d’un effet restrictif à l’intérieur de l’UE.

En ce qui concerne la durée de l’infraction, la Commission a retenu la période 1990-1995 (sauf pour British Steel Limited qui a abandonné la production des tubes en question en 1994).

(d) Amendes

Lors de la fixation des montants des amendes la Commission a tenu compte du fait qu’un accord visant le respect des marchés domestiques des entreprises participantes constitue par nature une infraction très grave au droit communautaire puisqu’il porte atteinte au bon fonctionnement du marché intérieur. De plus, les quatre États membres en cause représentent la majorité de la consommation des OCTG et des linepipe sans soudure dans la CE et, dès lors, un marché géographique étendu.

Cependant, la Commission a aussi tenu compte du fait que les OCTG standard et les linepipe project vendus par les entreprises destinataires de la décision dans la Communauté ne représentent qu’environ 19% de la consommation communautaire des OCTG et linepipe sans soudure. En outre, une partie de la demande d’OCTG et de linepipe sans soudure pouvait être couverte par des tubes soudés de moyen diamètre. Enfin, les ventes de ces produits par les entreprises destinataires de la décision dans les quatre États membres concernés ne s’élevaient qu’à environ 73 millions d’euros par an pendant la période 1990-1995. L’impact concret de l’infraction sur le marché est dès lors resté limité.

La Commission a retenu comme circonstance atténuante la crise de longue durée qu’a connu le secteur et le fait que depuis 1991 la situation du secteur s’est détériorée ce qui, combiné à l’afflux croissant des importations, a entraîné des réductions de capacités et des fermetures d’usines.

Il a enfin été fait application de la communication concernant la non-imposition d’amendes ou la réduction de leur montant dans les affaires portant sur les ententes20.

Vallourec a été la seule entreprise à fournir des éléments substantiels sur l’existence et le contenu de l’entente et a ainsi permis à la Commission de constater l’infraction à l’article 81, paragraphe 1, CE avec moins de difficulté. Cette coopération a justifié une réduction de 40% du montant de l’amende. Dalmine, qui n’a pas contesté la matérialité des faits sur lesquels la Commission avait fondé ses accusations, a obtenu une réduction de 20% du montant de l’amende.

La décision fait une nette distinction entre ces deux entreprises qui ont réellement coopéré et celles au comportement ambigu comme Mannesmannröhren Werke et British Steel: bien qu’elles n’aient pas contesté les faits, elles n’ont jamais clairement exprimé leur position ou mis en doute l’existence de l’accord tel que décrit dans la communication de griefs. Un tel comportement ne constitue pas une coopération effective qui aurait pu justifier une application de la communication précitée.

20 JO C 207 du 18 juillet 1996, p.4
The Commission fines FEG, the Dutch association of electrotechnical equipment wholesalers and its biggest member TU

By Ernst FERDINANDUSSE, DG COMP-F-1

On 26 October 1999, the Commission adopted a Decision by which fines have been imposed on the Dutch association of electrotechnical equipment wholesalers (FEG) and its biggest member Technische Unie (TU) for violating Article 81(1) of the EC Treaty. The Commission found that FEG and TU restricted competition by operating a system of collective exclusive dealing in combination with a system of price co-ordination on the Dutch wholesale market for electrotechnical equipment. The Commission therefore imposed fines of euro 4.4 million on FEG and euro 2.15 million on TU.

The case started as a result of a complaint in 1991 by the UK based wholesaler in electrotechnical equipment City Electrical Factors and its Dutch subsidiary (“CEF”). It concerns two infringements of Article 81(1) of the EC Treaty on the Dutch wholesale market for electrotechnical equipment, essentially over the period 1986-1994. Electrotechnical equipment includes a wide range of electrical products such as cables, plugs, lightsources, switches and sockets used for creating an electrical system in buildings, houses and industries. The first infringement regarded the operation of a collective exclusive dealing arrangement involving the FEG, the association of importers of such products in the Netherlands (“NAVEG“) and a large number of individual suppliers of such products.

Under this agreement FEG prohibited members of the NAVEG and individual suppliers from selling to wholesalers which were not members of FEG. The prohibition deprived these wholesalers of many of their sources of supply and complicated and delayed the entry to the Dutch market of foreign wholesalers such as the complainant. At the same time, the arrangement prevented suppliers from selling their products on the Dutch market via wholesalers who were not FEG members. As the turnover of the NAVEG members, especially depended for a large part on sales to FEG members it was difficult for them to ignore the wishes of the FEG.

The arrangement was based on a gentleman’s agreement between the FEG and the NAVEG which was joined by individual suppliers. It appeared that until the late fifties the collective exclusive dealing arrangement had been based on a formal written agreement. The Commission found evidence that after its prohibition by the Dutch competition authorities the parties had decided to convert the formal written agreement into the above-mentioned more covert gentleman’s agreement.

The second infringement identified by the Commission regarded the interference by FEG in the pricing policy of its members. It appeared from many documents that FEG and its members aimed at lessening price competition among themselves and at creating artificial price stability to ensure healthy margins. In order to achieve these goals FEG and its members had recourse to the following instruments:
- a binding FEG decision prohibiting its members from advertising using specially-reduced prices;
- a binding FEG decision obliging the FEG members to pass on to their customers price increases implemented by the supplier after they have ordered the products;
- discussions among FEG members on prices and discounts in the context of FEG meetings; and
- price recommendations issued by FEG to its members.

---

21 OJ L 39 of 14 February 2000, p. 1
The effects of the price arrangements were enhanced by the collective exclusive dealing arrangement. As the exclusive collective dealing arrangement intended to deprive potential price cutters such as non-FEG wholesalers from their sources of supply, the possibility that the artificial price stability created by FEG and its members would be put at risk by outsiders was strongly reduced. Considering that FEG members account for 96% of the Dutch wholesale market for electrotechnical equipment, the violations have appreciably restricted competition. As between 30-50% of all electrotechnical products sold on the Dutch market are imported, trade between Member States has also been appreciably restricted.

The decision orders the parties to put an end to the above infringements in so far as this has not yet occurred and imposes fines on both FEG and TU. The Commission has calculated the fines on the basis of its published fining guidelines\(^{22}\). In determining the amounts of the fines the Commission has taken into account that the infringements were serious and of long duration.

The Commission has identified FEG as the initiator and controller of both the collective exclusive dealing arrangement and the pricing arrangements. The Commission has also fined FEG’s biggest and most important member TU for two reasons, namely for supporting the infringements through:
- its active and long-term participation in the board of FEG and its committees; and
- its individual behaviour in support of both restrictions in its contacts with individual companies.

The Commission decided not to act against the 6 other members of the FEG which also received the Statement of objections. The information provided by those 6 parties in their written observations to the Statement of Objections and their comments during the hearing showed that in their case the Commission possessed insufficient evidence.

The procedure which started in 1991 has taken a considerable amount of time. Although the Commission considers that it is not solely responsible for the length of the proceedings, it has accepted its responsibility by taking into consideration the case law of both the Court of First Instance and the European Court of Justice in setting the amount of the fine\(^{23}\). The fines for both FEG and TU were therefore reduced by 100,000 euro each.

At the start of this year FEG (T-05/00) and TU (T-06/00) lodged appeals with the Court of First Instance against the Commission Decision.
Recent developments and important decisions

By Tiina PITKÄNEN, DG COMP-B-2 and Neil MARSHALL, DG COMP-B-1

Introduction and statistical overview

The number of incoming notifications continued at record levels between 1 September and 31 December 1999. A total of 107 operations were notified and 92 decisions were adopted on cases under the Merger Regulation’s main provisions (Articles 6 and 8). This was nine decisions more than over the previous four month period. The Commission also adopted one partial referral decision under Article 9 of the Merger Regulation.

In total, the Commission cleared 63 transactions in the first phase of the investigation. Of these 4 were approved in the first phase only after the parties submitted undertakings. A detailed enquiry in accordance with Article 6(1)c of the Merger Regulation was opened in a record number of 10 cases. One further operation was abandoned. The Commission took a decision after a detailed investigation in 5 cases. This included one prohibition decision. The others were approved subject to divestiture and other commitments, none was cleared without some form of commitment.

The Commission imposed fines for providing incorrect information in merger proceedings in 2 cases. Nine decisions were taken involving joint ventures where the risk of parental co-ordination was analysed under Article 2(4). One of these was cleared subject to commitments, the remainder cleared without commitments. The Commission issued a decision under Article 7(4) in 4 cases.

Decisions adopted following a detailed investigation (Article 8)

Decision adopted under Article 8(3) (declaring the operation incompatible with the common market)

Following a detailed investigation, the Commission decided to prohibit the proposed merger between Airtours plc and First Choice24 in the UK package holiday sector, as competition in the short-haul package tour market in the UK would have been significantly reduced. The transaction would have led to the creation of a situation of collective dominance between the merged Airtours/First Choice and the two other large, vertically integrated suppliers, Thomson and Thomas Cook. This was the first occasion on which the Commission prohibited a merger on the grounds of collective dominance among more than two firms.

The Commission found that all four companies were fully vertically-integrated, both upstream into charter airline operation, and downstream into distribution via the chains of travel agents which they owned. This tended to align their cost structures and increase the transparency of the market by making the large firms’ costs more easily visible to each other, reducing the likelihood of strong price competition between them. It also increased the scope for commercial links between them. Another key feature of the market was the relative inflexibility of supply, which created an incentive for the larger, integrated tour operators to keep the market ‘tight’ and not to expand capacity in order to compete aggressively with each other for market share. The Commission also found that there were potentially significant barriers to expansion by the many smaller tour operators to a size comparable to that of the four large firms.

The Commission found that the risk of an oversupplied market would act as a deterrent for the
oligopolists to compete for market share. The Commission also found that there would be scope for retaliation among the oligopolists if one of them were to do so. Against this background, the removal of First Choice as a competitor in tour operation and travel agency, and its likely loss as a major supplier of airline seats to third parties would, in the Commission’s view, lead to the creation of a collective dominant position among the three remaining large firms, with significant anticompetitive consequences. It would strengthen their interdependency, further marginalise the ‘fringe’ of smaller players, and increase market transparency. That would raise the incentives for the oligopolists to restrict their capacity, and facilitate the adoption of effective strategies for doing so.

Airtours proposed undertakings to remedy the Commission’s competition concerns. The proposal was to divest certain tour operating assets - including brand names and existing bookings - to a suitable third party. However, this was found to be inadequate largely because it did not address the problem of access for the prospective buyer to a suitable channel of distribution for its holidays. It would not, therefore, have remedied one of the main competition detriments of the merger. Subsequently the operation was prohibited.

Decisions adopted under Article 8(2)

In the five cases summarised below, the transactions were cleared subject to undertakings following in-depth investigations.

In Exxon/Mobil25, the operation as notified would have created or strengthened dominant positions in a large number of markets. Serious competition concerns arose, amongst others, on the markets for wholesale transmission of natural gas in the Netherlands and Germany, motor fuel retailing in several Member States, group I base oils (an ingredient for the production of lubricants) in the EEA and aviation lubricants world-wide. In order to remedy these concerns, the parties offered what is the most comprehensive remedy package accepted under the Merger Regulation to date. Several of these remedies raised particularly difficult issues. For example, Mobil agreed to withdraw from its joint venture with BP covering motor fuel and lubricants retailing in Europe. But the Commission had to balance the need for a quick resolution of its competition concerns against the need for the parties to get a proper consideration for Mobil’s interests in a sale to a monopsonist buyer. In relation to aviation lubricants, the Commission obtained the divestiture of Exxon’s business after the parties had initially proposed to divest Mobil’s aviation lubricants business. The Commission considered the sale of Mobil’s business to be inadequate because even though it would have eliminated the overlap between the parties, the Commission found that Mobil’s business was more integrated with the Mobil group than that of Exxon. Therefore, Exxon’s aviation lubricants business was considered to be more viable as a stand-alone entity, allowing the eventual purchaser to compete independently from the parties.

At the same time as the Commission was investigating Exxon/Mobil, it was also investigating another important merger in the oil and chemicals sector: the take-over by BP Amoco of Atlantic Richfield26. To illustrate the rapid pace of consolidation in this sector, the BP Amoco Group had itself only been formed after the merger between The British Petroleum Company and Amoco Corporation in December 1998. As initially notified, the operation would have created dominant positions on the market for the transport of unprocessed natural gas to the UK mainland through off-shore pipelines from fields in the Southern North Sea (‘SNS’).

---

25 Case No. IV/M.1383 – Exxon/Mobil; Article 8(2) decision with undertakings of 29 September 1999

26 Case No. IV/M.1532 – BP Amoco/Atlantic Richfield; Article 8(2) decision with undertakings 29 September 1999
sector of the UK Continental Shelf and also on the market for processing natural gas in processing facilities on the UK mainland servicing the SNS area. In order to eliminate the competitive concerns, BP Amoco undertook to divest certain pipeline and processing interests which had the effect that the merged entity’s position remains similar to that of BP Amoco’s beforehand.

In its investigation into the merger between the Swedish Telia and the Norwegian Telenor\(^27\), the Commission concluded that the concentration as originally notified would have caused serious competition concerns in a number of telecommunications and related services markets in both Sweden and Norway. The operation would have also led to adverse competition effects in the Irish mobile telephony market, where the merged entities would have had control over both of the only two operators active on the Irish market. Lastly, there were serious competition concerns in a number of Nordic, Swedish and Norwegian television services markets. The operation was subject to far-reaching commitments to open up access to the local access networks for telephony as well as to divest Telia and Telenor’s respective cable-TV businesses and other overlapping business. In particular, Telia and Telenor committed to divest all existing overlaps in the field of telecom services. The parties also undertook to sell either company’s stake in one of the two existing Irish mobile telephony operators. The parties also undertook to divest their respective interests in cable-TV networks in Sweden and Norway and to implement a set of measures to introduce local loop unbundling (LLU) in both countries.

In the form notified to the Commission, the transaction between Sanitec and Sphinx\(^28\) would have led to adverse competition effects in ceramic sanitary-ware and other bathroom products in the Nordic countries. The high market shares (up to 90%), an absence of countervailing buying power and only marginally present competitors led the Commission to conclude that the operation would have had a particularly negative effect on the Nordic customers. Sanitec offered subsequently a full divestiture of Sphinx’s Gustavsberg business in the Nordic countries. A notable feature of these undertakings is that while the Commission did not find competition problems in taps and mixers as such, the possibility for the potential buyer to buy this business as well was considered important for the viability of the divested business. The option to acquire this taps and mixers business will ensure that the buyer will be able to offer a full range of products and compete fully with Sanitec on the Nordic market.

Finally, in Honeywell/AlliedSignal\(^29\), the Commission’s investigation focused on the markets for avionics for commercial applications (products generally found in the aircraft cockpits, such as communication and navigation equipment). The operation combined the first and the third largest world-wide suppliers of commercial avionics with major presence in all aviation segments. The combined market shares produced by the merger in some markets were as much as 100 % in weather radars for civil helicopters. The combined entity would have reached market shares up to 74 % in Airborne Collision Avoidance Systems (ACAS) processors and ModeS Transponders and there would have been only one remaining competitor in this market which exhibited high barriers to entry. Furthermore, the parties’ strong position in the market for Terrain Awareness Warning Systems (TAWS) would have had an effect on the future market for Integrated Hazard Awareness Systems (IHAS), since the TAWS is a key part of this system. The new entity would have been able to

\(^{27}\) Case No IV/M.1439 – Telia/Telenor; Article 8(2) decision with undertakings 13 October 1999

\(^{28}\) Case No IV/M.1578 – Sanitec/Sphinx; Article 8(2) decision with undertakings 1 December 1999

\(^{29}\) Case No IV/M.1601 – AlliedSignal/Honeywell; Article 8(2) decision with undertakings 1 December 1999
technically link its engineering force and technology for the next generation of IHAS and thereby foreclose competition. In order to remedy their resulting dominant positions, the parties offered to divest Honeywell’s entire ACAS business and AlliedSignal’s weather radar business. With respect to TAWS, commitments were given to supply third parties with details of the open interface standards of other avionics products of the new entity, so that new suppliers can have their products installed on aircraft equipped with other avionics from the new entity. Regarding IHAS, there will be an obligation to supply third parties with TAWS technology as well as interface data so that future product development by competing suppliers can continue to take place.

**Decisions adopted under Article 6(1)c**

The period saw a record number of ten proceedings opened under Article 6(1)c of the Merger Regulation.

The Commission decided to open a full investigation in two operations in the industrial gases industry. In *Air Liquide/BOC*\(^{30}\), the main competition concerns arose from the strong position Air Liquide would obtain in particular in markets for the supply of oxygen and nitrogen in large quantities to industrial users (so-called tonnage markets), in the markets for helium and for speciality gases used in the electronics industry. The proposed acquisition of the Swedish company AGA AB by the German company Linde Aktiengesellschaft (*Linde/AGA*\(^ {31}\)) raised serious doubts as to its compatibility with the common market in particular in Germany, the Netherlands and Austria.

Competition concerns arise also in case *TotalFina/Elf Aquitaine*\(^ {32}\). The concentration, as notified to the Commission, could lead to dominant positions on the French territory, in particular on the markets of wholesale of fuel (petrol, gas oil, LPG), fuel retail sale of fuel on the motorways, production and the sale of LPG and the jet fuel supply of the Toulouse and Lyons airports. TotalFina presented undertakings, but these were judged insufficient both in scope and in substance so as to eliminate the serious doubts raised by the operation. For these reasons, the Commission decided to open a full investigation into the notified operation.

The proposed acquisition by the Canadian *Onex Corporation of Air Canada and Canadian Airlines Corporation*\(^ {33}\) would have brought the two main Canadian airlines serving routes between Canada and London under common control. It would also have resulted in the One world airline alliance becoming the only one serving UK-Canada direct routes. The Commission was concerned that the operation would have led to anticompetitive effects as the two Canadian airlines, together with British Airways (BA) are at present the only ones allowed, under bilateral government agreements, to fly scheduled direct services between Canada and London Heathrow, and all three have substantial shares of this traffic. Moreover, the Commission’s enquiries suggested that potential competitors may experience difficulty in obtaining appropriate take-off and landing ‘slots’ at Heathrow. The operation was abandoned a month after the Commission opened its detailed investigation. A detailed investigation was begun into the acquisition by *Volvo of Scania*\(^ {34}\), both leading European suppliers of trucks, buses and engines in the EEA and world-wide. The Commission’s initial investigation suggested that the merger would lead to adverse competition effects in the sectors of heavy trucks and buses. For

\(^{30}\) Case No. IV/M.1630 – Air Liquide/BOC; Article 6(1)c decision of 16, September 1999

\(^{31}\) Case No. IV/M.1641 – Linde/AGA; Article 6(1)c decision of 1, October 1999

\(^{32}\) Case No. IV/M.1628 – Totalfina/Elf Aquitaine; Article 6(1)c decision of 5 October 1999

\(^{33}\) Case No. IV/M.1696 – Onex/Air Canada/Canadian Airlines; Article 6(1)c decision of 15 October, 1999

\(^{34}\) Case No. IV/M.1672 – Volvo/Scania; Article 6(1)c decision of 25 October 1999
both sectors, the combined market share of Volvo/Scania after the merger would be extremely high, especially in the whole of the Nordic area of Europe (Denmark, Finland, Norway, Sweden), as well as in the UK and Ireland, in particular in buses.

The Commission also opened in-depth investigations into three operations affecting the worldwide aluminium markets. The proposed merger between aluminium producers Alcan, Alusuisse and Pechiney\(^\text{35}\) represented two of these operations since Alcan had made two separate and independent share exchange offers, one for the shares of Alusuisse and the other for the shares of Pechiney. Although the ultimate aim of the companies was a three-way merger, the two offers were not conditional upon each other so that it was possible for one merger to happen without the other. The initial investigation of the Commission identified a number of markets where the merger would raise serious competition concerns. Competition concerns would arise in smelter-grade alumina (SGA), commodity hydrate, aluminium flouride and synthetic zeolite, high purity aluminium and in particular P0404 aluminium.

In MMS/DASA/Astrium\(^\text{37}\), the Commission had concerns that the creation of Astrium, a joint venture of the German DaimlerChrysler Aerospace AG (DASA) and the Netherlands-based Matra Marconi Space N.V. (MMS) could lead to the creation of a dominant position on certain institutional markets for space systems in Europe. On the prime contracting level, Astrium would have a leading position in observation and scientific satellites and space infrastructure and is an important supplier of certain components to its main competitors, i.e. Alcatel Space and Alenia Aerospazio. Astrium might therefore be in a position to foreclose these prime contracting markets. Similarly, there were risks that the operation could have adverse effects at the component level, as Astrium could use its strong position as a purchaser to favour in-house suppliers and therefore foreclose such markets to third party suppliers.

Finally, the Commission decided to open a full investigation into the proposed acquisition by Dow Chemical of Union Carbide (UC)\(^\text{38}\). The operation would result in the creation of one of the world’s largest polyolefin companies. Serious doubts as to the compatibility of the operation with the common market arose on the polyethylene resins, polyethylene technology and ethyleneamines sectors. More particularly, on the polyethylene resins sector, the parties would have high market shares for all linear low density polyethylene (LLDPE) resins and in particular in C6 LLDPE and C8 LLDPE. The operation also gave rise to serious concerns also in relation to the market for polyethylene technology. In the ethyleneamines sector, the merger would result in significant

\(^{35}\) Cases No. IV/M.1663 – Alcan/Alusuisse; Article 6(1)c decision of 10 November 1999; No. IV/M.1715 – Alcan/Pechiney; Article 6(1)c decision of 10 November 1999

\(^{38}\) Case No. IV/M.1671 – Dow Chemical/Union Carbide; Article 6(1)c decision of 22 December 1999
overlaps, giving the parties high market shares both in the EEA-wide and globally.

Decisions adopted under Article 6(1)b involving remedies

The Commission cleared, subject to undertakings, four operations in the initial phase of the investigation.

In Pakhoed/Van Ommeren\(^{39}\), the Commission cleared a merger between the Dutch companies Pakhoed and Van Ommeren following the undertakings of the merging firms to divest part of their liquids storage terminals in Rotterdam and Antwerp. A merger proposal between the two companies had already been filed to the European Commission one and a half years ago, but at that time the divestment proposals were not sufficient to remove the competition problems that had been identified and the merger was called off. As a result of the current divestment proposals, the competitive overlaps in the storage markets in the ARA area (Antwerp - Rotterdam - Amsterdam) will be eliminated and the merger therefore does not raise competition concerns.

The Commission further approved the creation of a joint venture, EdF Trading Ltd, by Electricité de France (EdF) and Louis Dreyfus\(^{40}\) in the field of energy trading. As a result of its investigation, the Commission found that the proposed operation could strengthen the dominant position of EdF on the market for the supply of electricity to eligible customers in France, during the period between the establishment of EdF Trading and the legal and effective opening of this market. In order to remove the Commission’s serious doubts as to the compatibility of the operation with the common market, the parties agreed that EdF Trading would not directly or indirectly assist EdF in establishing prices or structuring contracts for eligible customers in France, nor would it assume the risks associated with such complex offers until the French market had been opened.

The Commission approved the transaction between New Holland and Case\(^{41}\) in the agricultural machinery and construction equipment sectors following far-reaching commitments. The concentration as originally notified would have caused serious competition concerns in the agricultural machinery sector by threatening to create or strengthen dominant positions in the markets for standard tractors, combine harvesters, large square balers and backhoe loaders. Moreover, the parties committed to open up their dealer networks in the EEA for all of the products divested. These undertakings will materially reduce the market shares of the merged entity in each of the markets where competition concerns were identified by the Commission.

The Commission approved the transaction between Akzo Nobel and the Hoechst Roussel Vet Group\(^{42}\) subject to substantial commitments to divest of products for veterinary pharmaceuticals and biologicals. The Commission’s investigation showed that the concentration would have caused serious

\(^{42}\) Case No. IV/M.1681 – Akzo Noble/Hoechst Roussel VET; Article 6(1)b decision of 22 November 1999
competition concerns by threatening to create or strengthen dominant positions in the markets for mastitis treatments as regards dry cow products based on cephalosporins in France. In the market sector of endocrine treatments the operation raised concerns of collective dominance in the market for synthetic prostaglandins in Portugal and of single dominance in the market for gonadotrophins in Spain. Moreover, competition concerns with regard to possible range effects also arose as both parties hold strong positions in particular in France and Germany for different endocrine treatments. The concentration would have also caused serious competition concerns by threatening to create or strengthen dominant positions in animal vaccines in several Member States. In order to address these serious doubts, the parties committed to divest products, and to licence and transfer to a viable independent third party the products in those markets where the Commission had serious competition concerns. The undertakings given will materially reduce the market shares of the merged entity in each of the markets where competition concerns were identified and the Commission therefore found that the modified concentration no longer raised serious doubts.

Decisions adopted under Article 2(4) (co-operative joint ventures)

The Commission issued decisions under Article 2(4) of the Merger Regulation in nine cases. Eight operations were cleared without undertakings while the co-operative joint venture between Fujitsu and Siemens was cleared subject to the companies’ compliance with certain commitments. This operation combined the European businesses of Siemens and Fujitsu for the development, manufacture and sale of computer hardware and related products, including desktop PCs, laptops, workstations, servers and storage systems. The Commission found that there was a risk of parental co-operation on the financial workstations market. To address the Commission’s serious competitive concerns in that market, Siemens undertook to divest Siemens Nixdorf Retail and Banking Systems GmbH, a subsidiary active on that market.

Decisions adopted under Article 9 (referrals to Member States)

The French authorities asked, under Article 9 of the Merger Regulation, for the referral of certain product markets considered as local in the case TotalFina/Elf Aquitane. These were the markets for storage of petroleum products, for sales of motor fuels on the French motorways and wholesales of LPG. In response to this request, the Commission granted a partial referral, that is, certain local markets considered as non substantial parts of the common market, such as several local petroleum storage depots serving the areas of Port-La-Nouvelle (south-eastern France), the northern part of Paris and the southern part of Paris and of Lyon, in view of the application of national legislation. However, as the Commission had initiated proceedings in relation to the other markets covered by the request of the French authorities, it did not refer the remaining markets, pending of a final assessment at Community level. Eventually, the undertakings offered by TotalFina remedied the problems indicated by the French authorities in those markets. Consequently the French authorities withdrew their request for the markets not included in the Commission’s referral decision, to the extent that the concerns raised by the French authorities were removed through the undertakings offered by the parties to the Commission.

Decisions adopted under Article 14

The Commission imposed fines under the provisions of the Merger Regulation in two cases. In Deutsche Post/trans-o-flex, Deutsche Post AG notified its

43 JV.22 Fujitsu/Siemens

44 Case No.IV/M.1610 – Deutsche Post/trans-o-flex; Article 14 decision of 14 December 1999
planned acquisition of the German high-speed delivery service, trans-o-flex GmbH in February 1999. According to Deutsche Post, it had acquired a minority shareholding in trans-o-flex in 1997 but the notification contained facts that pointed to an acquisition of sole control during that time. If that had been the case, the Commission would have had no jurisdiction to assess the transaction as notified in 1999 but, instead, the evaluation of the acquisition of the shares in 1997 would have had to be carried out by a number of national authorities. On the basis of these indications, the Commission requested additional information from Deutsche Post and others concerning the 1997 transaction. In the course of this investigation, it became apparent that Deutsche Post had deliberately supplied incorrect and misleading information to deceive the Commission. The Commission’s investigation suggested that Deutsche Post had exercised control over trans-o-flex since 1997 through its largest shareholder, Industrial Information. The Commission found that Deutsche Post had committed a serious infringement of two provisions of the Merger Regulation and therefore imposed two separate fines, the maximum amount of EUR 50 000 permitted under the Merger Regulation for each.

The Commission also imposed a fine on KLM for supplying incorrect and misleading information in case KLM/Martinair\(^\text{45}\). KLM notified to the Commission its planned acquisition of Martinair in September 1998 but this notification was withdrawn. The operation was re-notified to the Commission in December 1998\(^\text{46}\). The Commission started proceedings in that case because KLM supplied incorrect information in its first notification, the one issued in September 1998. In that notification, KLM submitted incorrect information on the charter destinations of its subsidiary Transavia and withheld relevant information on scheduled flights of Transavia. In particular, KLM gave an incorrect description of the destinations of Transavia and failed to list ten important Transavia destinations. KLM presented the operations of Transavia and of Martinair as ‘largely complementary’ while, in reality, both airlines operated to all Mediterranean destinations. Furthermore, KLM failed to inform the Commission about the fact that Transavia had substantial scheduled operations to Mediterranean destinations and sold a significant number of seats on these flights to Dutch tour operators, thereby giving a misleading description of the activities of Transavia. The Commission considered the behaviour of KLM as grossly negligent, at the very least, and imposed a fine of EUR 40 000.

**Decisions adopted under Article 7 (derogation from suspension)**

Pursuant to Article 7(4) of the Merger Regulation, the Commission may, on request, grant a derogation from the obligation to suspend the implementation of a concentration until it has been declared compatible with the common market. In taking its decision, the Commission takes into account, *inter alia*, the effects of the suspension on one or more of the undertakings concerned by the concentration or on a third party, and the threat to competition posed by the concentration.

The Commission granted a derogation from suspension under Article 7(4) in four cases. In two cases involving the dissolution of a joint venture between BP Amoco and Mobil in fuels and lubricants, both BP and ExxonMobil requested a derogation from suspension\(^\text{47}\). These requests were directly related to the clearance of the Exxon/Mobil merger. The clearance of this merger was conditional upon fulfilment of a whole series of commitments, including the dissolution of the

\(^{45}\) Case No.IV/M.1608 – KLM/Martinair; Article 14 decision of 14 December 1999

\(^{46}\) The operation was abandoned in May 1999 after the Commission raised objections against the operation.

\(^{47}\) Case No.IV/M.1820 – BP/JV dissolution; Article 7(4) decision of 22 December 1999; Case No.IV/M.1822 – Mobil/JV dissolution; Article 7(4) decision of 22 December 1999.
BP/Mobil joint venture. The joint venture was active in certain markets for which the Commission considered that the merger, without the commitment, would have led to the creation or strengthening of a dominant position. The Commission considered that the speedy transfer of control to BP Amoco was the best and most effective means of giving effect to the commitments secured by the Commission as it enabled BP Amoco to re-establish itself quicker as a competitor to the merged entity ExxonMobil.

The case **BBL/BT/ISP Belgium** involved the creation of an Internet service provider (ISP) joint venture in Belgium. The derogation from suspension was requested because Skynet, Belgacom’s Internet subsidiary, was about to launch an subscription free Internet product in Belgium. In the face of this, any delay in the implementation of the joint venture would have resulted in Belgacom achieving a very strong market share, causing significant damage to the parties. The Commission considered that the derogation from the suspension would not pose any threat to competition since the joint venture was a new entrant, which was supposed to challenge the incumbent Belgacom.

In **Onex/Air Canada/Canadian Airlines** the parties requested a derogation from suspension in order to enable Onex to put certain matters to Air Canada shareholders at a special meeting which was essential for the bid to be successfully completed and which was to take place before the expiry of the Commission’s review of the transaction under the Merger Regulation. The Commission considered that there were grounds to grant the derogation as the suspensive effect of Article 7(1) could have caused serious damage to the parties concerned.

---

48 Case No.IV/M.1667 – BBL/BT/ISP Belgium; Article 7(4) decision of 23 September 1999

49 Case No.IV/M.1696 – Onex/Air Canada/Canadian Airlines; Article 7(4) decision of 15 October 1999
Commission fines Deutsche Post, KLM, Anheuser-Busch and Scottish & Newcastle for supplying incorrect or misleading information in competition procedures

By Holger DIECKMANN, COMP-B-1, Gudrun SCHMIDT, COMP-B-3, Matthijs VISSER, COMP-F-3 and Nils VON HINTEN-REED, COMP-F-3

On 14 December 1999, the Commission adopted three decisions by which it imposed two fines of 50,000 Euro on Deutsche Post, a fine of 40,000 Euro on the Dutch airline KLM and fines of 3,000 Euro on each of the brewers Anheuser-Busch and Scottish & Newcastle. All companies had supplied incorrect or misleading information in competition procedures to the Commission. In the enforcement of the EC competition rules it is an essential condition that companies provide accurate and complete information to the Commission. These decisions underline the Commission's determination to ensure that firms comply fully with their legal obligations.

On the basis of these indications, the Commission requested additional information from Deutsche Post and others concerning the transaction of 1997. In the course of this investigation it became apparent, that Deutsche Post had deliberately supplied incorrect and misleading information to deceive the Commission about its jurisdiction. Deutsche Post withheld information relevant in this context. The investigation of the Commission showed that Deutsche Post may have
exercised control over trans-o-flex since 1997 through a third party which had acquired the majority of the shares: agreements show that Deutsche Post carried the economic risk for this majority shareholding.

This intentional supply of incorrect and misleading information in its notification and incorrect information in replying to information requests of the Commission by Deutsche Post, constitutes a serious infringement of two provisions of the Merger Regulation, which made the Commission adopt a decision by which two fines of 50,000 Euro each are imposed on Deutsche Post. Meanwhile, the German Bundeskartellamt has also launched an investigation in the matter.

**KLM**

In September 1998, KLM notified, in accordance with the Merger Regulation its planned acquisition of full control of Martinair. KLM is the leading Dutch airline and Martinair is the second largest Dutch airline. The notification was withdrawn by KLM after the Commission had discovered that it contained incorrect and misleading information. The operation was again notified in December 1998 and finally abandoned in May 1999 after the Commission raised objections against the operation. The Commission then started proceedings concerning the supply of incorrect information contained in the initial notification of September 1998.

In its initial notification, KLM submitted incorrect information on the charter destinations of its subsidiary Transavia and withheld relevant information on scheduled flights of Transavia. In the notification, KLM gave a table of the Mediterranean charter destinations of Transavia and of Martinair. In this table KLM failed to list ten important Transavia destinations. Furthermore, the table was presented in conjunction with the statement that the operations of Transavia and Martinair were "largely complementary", whereas in reality Transavia operated to all Mediterranean destinations which were also served by Martinair.

KLM also gave a misleading description of the activities of Transavia as it referred to Transavia only as a charter airline and failed to make any reference to the fact that Transavia had substantial scheduled operations to Mediterranean destinations and sold a significant number of seats on these flights to Dutch tour operators. In both instances the incorrect or misleading information was relevant for the assessment of the case. The Commission considers the behaviour of KLM as grossly negligent, at the very least and therefore decided to impose a fine of 40,000 Euro.

**Anheuser-Busch and Scottish & Newcastle**

Anheuser-Busch (USA) is the world’s largest brewing organisation and brews the American Budweiser brand. Scottish & Newcastle is the largest UK brewer. The companies are party to agreements concerning the brewing, distributing and marketing of Budweiser beer in the UK. Scottish & Newcastle became a party to the agreement following its take-over of Courage in 1995.

In the course of the Commission investigation following the notification of the agreements to the Commission, a formal request for information was sent to ask the parties whether there had been any changes to the agreements after Scottish & Newcastle signed up to them. In their joint response to the Commission’s request for information, the parties omitted the so-called Budweiser marketing guidelines, which were agreed and accepted by Scottish & Newcastle. The negligence of the parties in this case seriously hindered the proper instruction of the file. The Commission therefore adopted a decision imposing fines of 3,000 Euro on both Anheuser-Busch and Scottish & Newcastle.

**Concluding remarks**

In the cases of Deutsche Post and KLM the amount of the fine is at or close to maximum permitted, reflecting the Commission's view of their seriousness. The maximum fine which can be imposed for an infringement of the procedural

---

52 OJ L 49 of 20.02.2000, p.37
rules is relatively low, 50,000 Euro in Merger cases and only 5,000 Euro in cases concerning Articles 81 and 82 of the EC Treaty. In view of the importance of accurate information in competition procedures the Commission is therefore considering whether it might be appropriate to propose to the Council to increase the amounts for an infringement of these rules.

Subject: Case No COMP/JV.26 - FreeCom./.Dangaard Holding

The Commission approved the creation of a joint venture between the German companies BHS Holding GmbH & CoKG/debitel AG and the Danish companies Fleggaard Holding AS/Fleggaard Partner AS. The parent companies transferred to the joint venture their respective wholesale businesses (FreeCom GmbH and Dangaard Holding AS) concerning mobile telecommunications devices, in particular mobile phones, and related value added services (e.g. hot-line and repair services, implementation of promotion programmes for retailers, packaging for retailers). The operation allowed the joint venture to offer its customers a pan-European company structure and to better face increasing competition from network operators and service providers in bringing mobile phones to the market.

The Commission, while considering it not strictly necessary to define in detail the relevant product market, tended towards considering the wholesaling and the provision of related value added services to be two distinct markets. As to whether the geographical market was EU-wide or national could be left open. FreeCom had a well-established position on the German market while Dangaard was dominantly active in the Scandinavian markets and in Switzerland. Therefore, the activities of the two companies were to a large degree geographically complementary. In Germany, where the Parties’ activities overlapped, the resulting market share of the joint venture in the wholesale market did not exceed 15 percent.

The Commission concluded that the operation did not lead to the creation of a dominant position.
Commission authorises creation of joint venture BOL Spain by Bertelsmann AG and Planeta Corporación S.R.L.

By Hubert GAMBS, DG COMP-C-2

The European Commission has cleared the concentration between Bertelsmann AG and Planeta Corporación S.R.L. Through this operation the parties will obtain joint control over Books On-Line Ibérica, S.A. (BOL Spain). The operation will not lead to the creation or strengthening of a dominant position.

Bertelsmann heads a group of companies that operate internationally in printing, publishing and distribution of books, music and private television as well as related services. Planeta belongs to the Planeta group that operates in publishing and distribution of cultural and leisure content by means of all types of print and other media, mainly in Spanish language. BOL Spain is active in the sale of books in the Spanish language as well as the other official languages of Spain (Catalan, Galician, Basque) via the Internet.

The parties will concentrate their on-line sale activities of books in these languages in BOL Spain. For this purpose, Planeta will acquire an 50% stake in BOL Spain, which is currently a wholly owned subsidiary of Bertelsmann.

Although the parties are active in the markets for distant sales of books as well as for Internet sales of books in Spain, they are not dominant in these markets. There is also no indication of co-ordination in any other market, like e.g. the market for the publishing of books in Spain.

The Commission has, therefore, decided not to oppose this operation.

Commission authorises takeover of CDnow by Time Warner and Sony

By Ali NIKPAY, DG COMP-C-2

The European Commission has cleared the takeover of Cدنow by Time Warner and Sony. CDnow will become a subsidiary of a new corporation Holdco which will be jointly controlled by Time Warner and Sony. CDnow’s share of the market in which it operates is low, as are those of Time Warner and Sony. At the horizontal level therefore the operation will not lead to the creation or strengthening of a dominant position. It will also not alter the competitive situation from a vertical perspective as Time Warner and Sony will need to continue to sell music and home video products through other third party distributors and retailers in the EEA and world-wide. The operation will also not lead to the co-ordination of the competitive behaviour of Sony and Time Warner either. Time Warner is a Delaware corporation, which is engaged in the media and entertainment industries. Sony is a New York corporation which is an indirect subsidiary of Sony Corporation, based in Tokyo, Japan. Sony Corporation is an entertainment and consumer electronics company, providing entertainment and electronic products and services to consumers around the world.

The Commission has, for the above reasons, decided not to oppose this operation.
La Commission européenne autorise la création de l’entreprise commune Hearst Mondadori Editoriale SRL

By Jacques LOVERGNE, DG COMP-C-2

HMI est une filiale du groupe Hearst, une société active dans les métiers de la communication. Mondadori appartient au groupe Fininvest, dont il constitue la filiale regroupant ses activités dans l’édition.

L’opération concerne le marché des magazines féminins en Italie, qui se subdivise en marché du lectorat et en marché de la vente d’espace publicitaire.

Si Mondadori détient un certain nombre de magazines féminins, il n’est pas en position dominante en Italie sur le marché concerné. Le groupe Hearst n’a aucune activité en Italie.
The Multisectoral framework on regional aid for large investment projects: a mid-term review

By Adolfo BARBERÁ DEL ROSAL, DG COMP-H-2

Introduction

On 16 December 1997, the Commission adopted the Multisectoral framework on regional aid for large investment projects53 (hereinafter “the Multisectoral Framework”). This Framework became applicable from 1 September 1998 for an initial trial period of three years. Before the end of the trial period, the Commission will carry out a thorough review of the utility and scope of the Framework, which will inter alia consider the question of whether it should be renewed, revised or abolished.

The framework is intended to limit the amounts of regional aid for large investment projects.

One of the main objectives of the new approach under the Multisectoral Multisectoral framework on regional aid for large investment projects is to re-focus regional aid on job creation.

It also fits into the Commission’s broader objective of ultimately putting an end to the various existing sectoral rules on state aid with a view to adopting a single approach to major awards under regional aid schemes regardless of the sector involved, except in the case of coal and steel, which will remain subject to the ECSC Treaty until July 2002.

The new framework generalises, in all sectors not covered by sectoral rules on state aid, the obligation to notify individually any aid planned for large-scale projects under regional aid schemes where one of the following two criteria is met:

(i) the total project cost comes to more than ECU 50 million 101 and the aid intensity is more than 50% of the relevant allowable ceiling and the aid per job created or safeguarded exceeds ECU 40 000;

(ii) the aid amount exceeds ECU 50 million.

For large-scale projects thus defined, the framework lays down rules aimed at reducing any competition-distorting effects by lowering the aid ceiling compared with the maximum ceiling of intensity authorised in the region concerned, and this on the basis of three criteria:

- the capital-labour ratio;
- the degree of competition in the relevant market; and
- the impact on regional development.

These three criteria are each translated into a coefficient the value of which varies with the project’s characteristics.

To obtain the theoretical ceiling of permissible aid for a large-scale project, the maximum intensity authorised in the region concerned must be multiplied by the three coefficients obtained, provided the product of these coefficients is less than one.

In this latter respect, it is important to note that the Multisectoral Framework indicates that the maximum aid intensity (regional aid ceiling) to be used for the calculations is the one a large company could obtain in the assisted area concerned within the context of the authorized regional aid system valid at the moment of notification. A pre-condition for this provision to be applied is that a valid regional aid map exists at the time of the notification. However, this is not the case for a number of Member States after 31 December 1999. However, all the notifications received so far have been made at a point in time where a valid regional aid map existed.

The Multisectoral Framework thus aims at awarding a 'bonus'...
to aid financing investments which generate direct and indirect jobs. It has also set out to reduce the amount of aid in cases where the investment creates an increase in capacity in a declining sector or where an over-capacity situation exists, or in cases where the benefiting firm owns, before the assisted investment is carried out, a market share of at least 40%.

On the procedural level, the Commission has either to approve aid within two months of their notification or, where there are doubts, to open an inquiry procedure and to take a final decision after four months maximum.

The decisions taken on the basis of the Multisectoral Framework

Until now (15 February 2000), the Commission has received 14 notifications, of which 4 have resulted in a final decision. One notification was withdrawn after several exchanges of information with the Member State concerned.

The four decisions were taken without opening the investigation procedure, and can be summarised as follows54:

54 A non-confidential version of these decisions in the official language of the Member State concerned can be found at: http://europa.eu.int/comm/secretariat_general/sgb/state_aids/index.htm.

</table>

The application of the Multisectoral Framework: particular remarks on the competition and the regional impact factors

As expected, the experience until now has shown that the two critical steps in the assessment of the maximum allowable aid intensity for a project are the establishment of the competition factor as well as the determination of the regional impact factor.

The competition factor

As regards the competition factor, its calculation involves a thorough examination of both the capacity utilisation in the sector concerned and the relevant market. The conclusions reached in the four decisions are as follows:

**N 94/99 (Rockwool)**

The relevant product market consists of mineral wool insulation materials (mainly fibre-glass and mineral wool) because most competing plastics insulation (e.g. polyurethane and polystyrene) and other insulation materials (e.g. cellulose, perlite and vermiculite) have not the combined very high thermal, acoustic and fire protection values. Moreover, some important market participants have specialised in one category of insulation products so that the relative positions of competitors differ strongly in different product market segments.

In the notification, Spain considered that the relevant geographical market corresponds to the area which can be served in a profitable way from the Caparroso. This area corresponds to France, Spain and Portugal. However, in its decision, the Commission took a different view. In conformity with point 7.6 of the Multisectoral Framework, the relevant geographic market comprises usually the EEA or, alternatively, any significant part of it if the conditions of competition in that area can be sufficiently distinguished from other areas of the EEA. Given the geographical dispersion of the European manufacturers, the various supply areas can be seen as a series of overlapping circles with their centres at the mineral wool plants. There is relatively low concentration of mineral wool plants in Southern Europe. To a certain extent, the argument could be made that this represents a different market. However, given the dispersion of the individual mineral wool plants and various degrees of overlap for the natural supply areas, so that effects can be transmitted from one circle to another, it seems appropriate to consider, in the absence of other arguments put forward by Spain, that the geographical relevant market is the Community as a whole.

In the absence of sufficient data on capacity utilisation, the Multisectoral Framework provides in its point 3.4 that the Commission will consider whether the investment takes place in a declining market. For this purpose, the Commission has to compare the evolution of apparent consumption of the product in question (that is, production plus imports minus exports) with the growth rate of
EEA manufacturing industry as a whole.

The average annual growth rate for the EC manufacturing industry over the period 1992-1997 was 3.235%. On the basis of the information provided by the European Insulation Manufacturers Association “EURIMA”, the annual average growth rate for mineral wool in Europe was 3.475%, for the period 1992-1997. To support their view that the mineral wool market is expected to grow, the Spanish authorities indicated that other manufacturers of mineral wool are also planning to expand their capacities. Isover (Saint Gobain) is increasing its capacity in Orange (MT 15 000), Châlon (MT 5 000) and Etten Leurre (MT 15 000). Pleiderer is planning to increase its output by MT 40 000. Poliglas is currently building a new factory in St Avold (MT 22 000). According to the Spanish authorities these increases are intended to cope with the expected market growth.

On the basis of the above, the Commission considered that the mineral wool market could not be deemed to constitute a declining market. Since the Commission was satisfied that the market share of Rockwool did not exceed 40% whatever the product or geographical market definition used, it concluded that the competition factor was equal to 1.

\[ N \text{ 582/99 (Marina di Stabia)} \]

The Commission decided to consider the whole Tirrenian coastline of Italy plus Côte d’Azur as the relevant market. Bar the 18% transit and safety moorings, the core of the traffic (around 82% of the total) of the newly built marina will be represented by local yachtsers, mainly from the provinces of Naples and Salerno. Marina di Stabia will cover only 6.46% of the demand for moorings in Campania and just 0.7% of the estimated supply nation-wide in the year 2005.

The new marina will favour the promoters and operators who will either sell or lease the moorings. In terms of availability of moorings for recreational crafts, Italy finds itself at a competitive disadvantage vis-à-vis other Member States. The project aims at filling the existing gap along the coasts of Campania, notably in the Gulf of Naples. At the moment, Italy has just 343 tourist ports and marinas unevenly distributed along a coast 8,000 km long. It thus appears that there is large scope for an expansion of the market for these infrastructures, as the few moorings which do exist offer little or nothing by way of facilities.

The market for recreational crafts is strictly linked to the marina-building market but will not be significantly affected at the EU level by the new project.

As far as the three-star hotel is concerned, it is certain that it will not affect the intra-EU exchanges to an extent that is incompatible with the competition conditions in the internal market since:

- the relevant market for the hotel facilities is essentially limited to the marina residents, and
- the promotion or organisation of package holidays usually sold by international agencies and tours operators is incompatible with both the hotel’s standard and the marina’s business plan.

On the basis of the above considerations, and since Marina di Stabia does not hold a market share of 40% or more of the relevant market, the Commission decided to consider a competition factor of 1.

\[ N \text{ 583/99 (Benfil)} \]

The cotton yarn (NACE 17.11) produced by Benfil and delivered to Tessival Sud Srl and Tessival SpA is the basic material for the production of cotton fabrics. According to the Italian authorities, for technical reasons the production equipment for cotton weaven fabrics can not be reconverted for the production of alternative fabrics, i.e. synthetics or cotton-mixed. The production of synthetics requires looms operating at double speed compared to the weaving of cotton.
The cotton fabrics can be used in different applications:
- for the clothing market, which can be subdivided in the categories velvet, flats, denim, fabrics for shirting and tissues, used for shirts, trousers, and coats.
- for technical articles to imitate leather, footwear, wallpaper as well as for the furniture sector (upholstery, curtains).

Thus, from the demand-side substitution for cotton weaven fabrics, many of the aforementioned final applications, namely fabrics for technical articles, can be thought to admit substitution by alternative fabrics, i.e. synthetic fibres, by reason of their characteristics, their prices and their intended use.

Consequently, the Commission considered as relevant market the cotton-type weaving market as a whole, which includes manufacture of broad woven cotton-type fabrics, either with cotton or artificial or synthetic yarns.

On the basis of the information supplied by the Italian authorities, the Commission further decided that the relevant geographical market was the Community as a whole.

The Commission scrutinised the market for the time period of 1995 to 1998 instead of a five years period, as it was impossible to obtain data for a longer time period. The data comprise the main EU Member States. However, due to the fact that the data on which the Commission based its assessment cover 2/3 of the installed capacity, it considers the figures to be sufficient to give a representative picture of the market situation.

Accordingly, the Commission assessed the average capacity utilisation for the whole manufacturing industry for the period 1995 to 1998 at 82.2%.

As to the capacity utilisation rate, the Italian authorities provided capacity data for the weaving sector showing an average capacity utilisation of 90.5% based on a 220 days-a-year benchmark used as a theoretical ceiling to which the effective working time of the looms is reported. However, bearing in mind the above-mentioned considerations, the average capacity utilisation for the sector of cotton-type weaving in the period 1995-1998, on the basis of a 240 days-a-year benchmark, which is the usual benchmark in this industry, amounts to 77.8%. This represents a difference of minus 4.4 %. Thus, the Commission notes that a structural overcapacity exists in the relevant market segment.

Based on the above, and taking into consideration that the aid beneficiary did not have a market share of 40% or more in the relevant market, the Commission decided that the competition factor to be applied was 0.75.

N 584/99 (Tessival)

Cotton fabric is a material made from cotton yarn. The fabrics can be used in different applications. The cotton fabric for the clothing market, wherein the aid beneficiary will be operating, can be subdivided in the categories velvet, flats, denim, fabrics for shirting and tissues. The aid beneficiary will produce the category “flats” which represents about 70% of the market concerned.

Within the clothing sector, fabrics produced by the aid beneficiary will be used for shirts, trousers, and coats. Other applications of beneficiary’s production are technical articles for imitation leather, footwear, wallpaper as well as for furniture (upholstery, curtains). The product competes with substitutes which the consumer might consider by reason of its characteristics, their prices and their intended use.

Thus, from the demand-side substitution for woven cotton, many of the afore-mentioned final applications, namely fabrics for technical articles, can be thought to admit substitution by alternative fabrics, i.e. synthetic fibres. In accordance with point 7.6 of the Multisectoral Framework, the Commission considered as relevant market the cotton-type weaving market as a whole which includes manufacture of broad woven
cotton-type fabrics, either with
cotton or artificial or synthetic
yarns.

In the absence of precise
information, it seems appropriate
to consider that the geographical
relevant market is the
Community as a whole.

The Commission scrutinised the
market for the time period of
1995 to 1998 instead of a five
years period, as it was
impossible to obtain data for a
longer time period. The data
comprise the main EU.
However, due to the fact that the
data on which the Commission
based its assessment cover 2/3 of
the installed capacity, it
considers the figures to be
sufficient to give a representative
description of the market situation.

Accordingly, the Commission
assessed the average capacity
utilisation for the whole
manufacturing industry for the
period 1995 to 1998 at 82.2%.

The Italian authorities provided
capacity data for the weaving
sector showing an average
capacity utilisation of 85.7%
based on a 233 days-a-year
benchmark used as a theoretical
celling to which the effective
working time of the looms is
reported. However, according to
available data provided by
Eurocoton and the International
Textile Manufacturers Fede-
rations, the average capacity
utilisation in the period 1995-
1998, on the basis of a 240 days-
a-year benchmark which is the
usual benchmark in this industry,
amounted to 77.8% representing
a difference of minus 4.4%.
Thus, the Commission
considered that a structural
overcapacity exists in the
relevant market segment.

Based on the above, and taking
into consideration that the aid
beneficiary did not have a
market share of 40% or more in
the relevant market, the
Commission decided that the
competition factor to be applied
was 0.75.

The regional impact factor

The regional impact factor is
based on the number of jobs
created by first-tier suppliers and
customers in response to the
aided investment. The
conclusions reached in the four
decisions are as follows:

N 94/99 (Rockwool)
The transport of end-product is
the most important source of
indirect job creation (45). The
Spanish authorities justify this
on the following basis:

For an estimated production of
800 000 m³, 10 000 trips are
scheduled. The average distance
per trip is estimated at 450/500
km. One driver is estimated to
make 220 trips per year.

The Commission considered that
the justifications provided by the
Spanish authorities are
acceptable. Accordingly, a factor
of 1.1 was applied.

N 582/99 (Marina di Stabia)
The new marina would have a
capacity of 1 292 moorings and
create around 515 new jobs, both
directly (141) and indirectly
(374). The project also includes
a three-star hotel with 220
double rooms, a dry dock for
161 crafts and an area destined
for services, commercial and
leisure activities. The
Commission also considered that
the justifications provided by the
Italian authorities were
acceptable. Accordingly, a factor
of 1.5 was applied.

N 583/99 (Benfil)
The most important source of
indirect job creation (80) is in
the re-processing sector. About 4,000 tons/year of cotton yarn produced by Benfil need re-processing before their final manufacture by Tessival Sud Srl and Tessival SpA. The companies Tessilsud, Fil Mer and Filatura di Trani, all of them located in objective 1 regions (Campania and Puglia) will carry out the re-processing.

The second source of indirect job creation is in the supply services (51).

The Commission was satisfied by the evidence provided by the Italian government for the causality between the Benfil project and these jobs. Furthermore, they fulfil the criteria of point 7.5 of the Multisectoral Framework, namely that they are permanent full-time jobs or part-time equivalents. They are all created in objective 1 areas (Campania and Puglia).

Based on these facts, the regional impact factor is to be calculated from the ratio indirect jobs created in assisted area/direct jobs created by the investment. The above mentioned figures account for the creation of 131 jobs which represents a medium degree of indirect job creation, and thus a factor of 1.25.

N 584/99 (Tessival)

According to the Italian authorities, the most important source of indirect job creation (276) is the customer market. This involves dressmaking companies. However, the Commission noted that the beneficiary’s production will be sold to its mother company, Tessival. Although the fabrics supplied to the clothing industry in the region substitute partly Tessival’s imports from third countries, it seems inconsistent to expect that the beneficiary’s production will generate any new job in this industry. Consequently, the Commission did not consider an increase in indirect jobs in the clothing industry in the region.

The most important source of indirect job creation provides the external final treatment. The number of 127 is calculated on the basis of 2.05 jobs per million m² out of the envisaged total production of 62 million m². The Commission held that the figure of 127 indirects jobs created through the external final treatment of the total production of the aid beneficiary was realistic.

The third source of indirect job creation is estimated in the supplier market. The Commission notes that the aid beneficiary will buy two types of raw material, 8,700 tons of open-end cotton yarn, supplied by Benfil, and 4,500 tons of ring cotton yarn, supplied by five companies located in the region or in adjacent regions. According to the Italian authorities, the production of 100 kg of ring cotton yarn requests 4 man/hour. On the basis of 1,700 man/hour/year, the production of 4,500 corresponds to 106.

Finally, the Commission considered the indirect jobs amounting to 55 to be created in the supply of services to be over-estimated and not proportionate to the size of the project. Therefore, the Commission held that only 40 full time jobs should be considered.

Taking into account the above, the total number of indirect jobs created in the assisted and adjacent assisted regions amounted to 273. According to this figure compared to the direct job creation of 400, the ratio is between 50% and 100% and therefore a factor of 1.25 is applicable.

Conclusion

As shown above, the Multisectoral Framework has worked well so far and is expected to work properly during the 3-year trial period.

With the exception of the fact that at present there is no valid regional aid map for some Member States, there have been no major obstacles with the implementation of the Multisectoral Framework.

As expected, the experience until now has shown that the two critical steps in the assessment of the maximum allowable aid intensity for a project are the establishment of the competition factor as well as the determi-
nation of the regional impact factor.

Whereas the competition factor is to be determined in advance by the Commission, the regional impact factor depends very much on the effective creation of the anticipated indirect jobs. The latter, by definition, can only be monitored after the implementation of the project. That is why the ex-post monitoring laid down in point 6 of the Multisectoral Framework is of the greatest importance in order to ensure that the Framework works properly and that the maximum allowable intensity for a project is not unduly increased.

In order to ensure compliance with the Commission decision, the Member States, in cooperation with the aid beneficiaries, must provide the Commission with an annual report on the project, including information on the subsidies already paid, any interim report on the execution of the aid contract, and a final report indicating the objectives in terms of the timetable, the investments, and compliance with any specific conditions laid down by the authority granting the aid.

In the four above cases, the Commission was satisfied that the Member States concerned explicitly undertook to comply with and to accept the obligations resulting from the application of point 6 the Multisectoral Framework. The decisions were therefore adopted on the basis of this understanding. Should the monitoring show that the execution of the project is not in compliance with the Commission decision, then the Commission shall require the Member State to activate the aid reimbursement instruments.

The Commission has adopted a notice on the application of Articles 87 and 88 of the EC Treaty to State aid in the form of guarantees.

The Commission adopted on 24th November 1999 the "Commission notice on the application of Articles 87 and 88 of the EC Treaty to State aid in the form of guarantees". Its purpose is to give Member States more detailed explanations about the principles on which the Commission intends to base its interpretation of Articles 87 and 88 and their application to State guarantees. The Commission intends in this way to make its policy in this area as transparent as possible, thereby ensuring that its decisions are predictable and that equal treatment is guaranteed. The document does in fact not set up new rules but only openly states the existing principles of assessment.

In 1989 the Commission addressed two letters on State guarantees to the Member States. In the first letter the Commission pointed out that it regards all guarantees given by a State as falling within the scope of Article 87 (1). According to this letter, the Commission must therefore be notified of any plans to give or alter such guarantees in sufficient time to enable it to submit its comments. In the second letter the Commission made it clear that it intended to examine the establishment of State guarantee schemes, and that individual guarantees given under an approved scheme would not need to be notified. In 1993 the Commission adopted a communication which addres-

57 Commission Communication to the Member States on the application of Articles 92 and 93 of the EEC Treaty and of Article 5 of Commission Directive 80/723/EEC to public undertakings in the...
Guarantees are usually associated with a loan or other financial obligation to be contracted by a borrower with a lender and may be granted as individual guarantees or within guarantee schemes. If aid is involved, this aid is in most cases granted to the borrower. Typically, with the benefit of the State guarantee, the borrower can obtain lower rates and/or offer less security. In some cases, the borrower would not, without a State guarantee, find a financial institution prepared to lend on any terms. The Notice explains how the aid element of a guarantee should be calculated and offers several ways for this calculation.

The Notice does not prejudice the rules in Member States governing the system of property ownership. However, the principles explained in the Notice apply to all forms of public guarantees, regardless whether they are fixed in a contract or in a law. The Commission also regards as aid in the form of a guarantee, the more favourable funding terms obtained by enterprises whose

legal form rules out bankruptcy or other insolvency procedures or provides an explicit State guarantee or coverage of losses by the State. The same applies to the acquisition by a State of a holding in an enterprise if unlimited liability is accepted instead of the usual limited liability.

Under certain circumstances (e.g. if a guarantee is given ex post in respect of a loan or other financial obligation already entered into without the terms of this loan or financial obligation being adjusted, or if one guaranteed loan is used to pay back another, non-guaranteed loan to the same credit institution), there may also be an aid to the lender. This has to be examined on a case to case basis.

The Notice also states some conditions under which the Commission a priori assumes that no aid element is included in a guarantee (and thus no notification is necessary). These conditions comprise that the borrower is not in financial difficulty and could in principle obtain a loan on market conditions from the financial markets, that the guarantee is linked to a specific financial transaction, is for a fixed maximum amount and does not cover more than 80 % of the outstanding loan and that the market price for the guarantee is paid. For guarantee schemes similar considerations apply, including that the premiums paid by the beneficiary enterprises should be calculated in a way making the scheme, in all probability, self financing. However, this enumeration does not mean that guarantees automatically include aid if not all of these conditions are met.

The Notice does not address the question of compatibility of aid granted in the form of guarantees. In that respect the same rules apply as to State aid in other forms.

Furthermore, the Notice explains the consequences of failure to notify State aid in the form of guarantees. Guarantees differ from other State aid measures (e.g. grants) in so far as in the case of a guarantee the State does not only enter into a legal relation with the beneficiary but also with third parties, e.g. the lender of a loan which is guaranteed by the State. Therefore, it has to be examined whether the fact that a State aid has been illegally granted has also consequences for these third parties. However, this question is a matter which has to be assessed under national law; national courts may have to examine whether national law prevents the guarantee contracts from being honoured. Nevertheless, lenders may have an interest in verifying, as a standard precaution, that the Community rules on State aid have been respected, whenever guarantees are granted.

In the past, Member States have not always recognised the aid content of State guarantees and the fact that the aid is granted
when a guarantee is given and not when it is actually honoured. Therefore, Commissioner Monti has asked the Member States in a separate letter to communicate within four months all State guarantees falling within the scope of Article 87 (1) which should be, but have not been, notified to the Commission as well as all State aid in the form of State guarantees which might constitute existing aid within the meaning of Article 88 (1).

Nouvelles Décisions sur les cartes des aides d’Etat à finalité régionale

Tous les Etats membres ont désormais communiqué officiellement leurs projets de cartes des aides régionales. Après une première évaluation de ces propositions, la Commission a cependant été amenée à exprimer des doutes sur la compatibilité avec le Traité des projets de certains Etats membres. Ainsi, en juillet 1999, elle a ouvert la procédure prévue à l’article 88§2 du traité CE à l’encontre des propositions relatives aux cartes de la Belgique, de la France et des Pays-Bas, ainsi qu’en ce qui concerne la partie de la carte relative aux régions éligibles à la dérogation prévue à l’article 87§3.c) du traité CE, en Allemagne. Depuis lors, de nouvelles décisions ont été prises à l’égard des projets de cartes soumis par le Danemark, la Grèce, l’Irlande, le Portugal et la Finlande.

En raison de leur notification tardive, les cartes des autres Etats membres (toujours, à cause des doutes à l’égard de leur compatibilité avec les dispositions des lignes directrices, les parties "87.3.c") des cartes allemande et portugaise) n’ont pas pu être approuvées avant la fin 1999. En attendant leur approbation, les Etats concernés ne sont plus en mesure d’octroyer ce type d’aides depuis le 1er janvier 2000.

Danemark

La Commission a approuvé la carte danoise le 26 octobre 1999. La part de la population habitant dans les régions éligibles, toutes retenues au titre de la dérogation prévue à l’article 87§3.c) du traité CE, diminue de 20% à 17,1%.

L’aide ne pourra en général pas dépasser 10% net de la valeur de l’investissement, à l’exception des régions de Bornholm et Storestrøm (20% net). Ces deux dernières régions, constituées de multiples îles, rencontrent en effet des problèmes spécifiques de développement liés à l’insuffisance des infrastructures de transport.

Grèce

La Commission a approuvé la carte grecque le 22 décembre 1999. Compte tenu du fait que le PIB par habitant reste inférieur à 75% de la moyenne communautaire dans toutes les régions grecques, cet Etat membre est entièrement éligible à la dérogation prévue à l’article 87§3.a) du traité CE.

Cependant, les intensités maximales des aides diminuent de façon significative, et ne pourront pas dépasser 50% net de la valeur des investissements dans les régions Anatoliki Makedonia, Thraki, Ipeiros, Dikiti Ellada, Peloponissos et Vorèio Aigaio. Dans toutes les autres régions grecques, cette intensité maximale a été fixée à 40% net. En outre, ces taux maximaux sont modulés en fonction du type de projets d’investissement, ainsi que du secteur d’activité concerné.

Irlande

La Commission a approuvé la carte irlandaise le 26 octobre 1999. Alors que la nécessité d’aides régionales continue de se faire sentir dans toutes les régions irlandaises, le développement économique impressionnant qu’a connu l’Irlande durant les dernières années a été pris en compte au travers d’une réduction importante des intensités d’aide.

Ainsi, l’intensité maximale des aides à l’investissement a été fixée à 40% net dans les régions Border, Midlands et West. Avec un PIB par habitant inférieur à 75% de la moyenne communautaire, ces régions continuent d’appartenir aux régions les moins développées de l’Union, et restent donc éligibles au titre de la dérogation prévue à l’article 87§3 a) du traité CE.

En revanche, des intensités moins élevées sont prévues pour les autres régions irlandaises, toutes
éligibles à la dérogation prévue à l'article 87§3 c). Ainsi, dans le South-East, le Mid-West et le South-West, les intensités d’aide seront progressivement ramenées de 40% (en 2000) à 20% net (à partir de 2004), et dans le Mid-East de 40% à 18% net. Enfin, l’intensité d’aide qui s’applique à Dublin à partir de 2000 est de 17,5% net.

**Portugal**

Le 8 décembre 1999, la Commission a approuvé la partie de la carte qui concerne les régions portugaises éligibles à la dérogation prévue à l’article 87§3 a) du Traité CE (Norte, Centro, Alentejo, Algarve, Açores et Madeira). Les intensités maximales d’aide autorisées varient de 40% à 62% net, tout en étant modulées à l’intérieur de chaque région, compte tenu de sa situation socio-économique.

En ce qui concerne la région de Lisboa e Vale do Tejo, qui sera entièrement éligible à la dérogation prévue à l’article 87§3 c) en tant que «région 87§3 a) sortante», la notification portugaise prévoit que l’entièreté de cette région, qui représente 33,4% de la population nationale, bénéficiera d’une période de transition de 4 ans pour l’adaptation des intensités d’aide actuelles. Or, au vu des limitations établies par les lignes directrices à l’égard de la portée géographique de cette disposition transitoire, seul un pourcentage de 10,2% de la population portugaise pourrait bénéficier d’une telle période. En conséquence, la Commission a décidé d’ouvrir la procédure prévue à l’article 88§2 du Traité CE à l’égard de cette partie de la carte.

**Finlande**

La Commission a approuvé la carte finlandaise le 26 octobre 1999. Si la part de la population habitant dans les régions éligibles augmente très légèrement (de 41,7% à 42,2%), les intensités d’aide sont par contre en diminution sensible.

La région de Itä-Suomi, éligible au titre de la dérogation prévue à l'article 87§3 a) du traité CE, bénéficiera des intensités maximales les plus élevées (24% net), tandis que pour ses autres régions la Finlande limitera les aides aux grandes entreprises à 8%, 10% ou 12% net selon les cas.

**United-Kingdom**

With regards to article 86 § 2 of EC Treaty, the Commission authorizes the financing of a 24-hour advertising-free channel out of the licence fee by the BBC, "BBC News 24".

In 1997 a private competitor filed a complaint against the launching by the BBC of a 24-hours news service in the United Kingdom to be financed solely by the licence fee. BBC News 24 is a channel delivered free of advertising and free of charge to carriers (cable or satellite operators).

The service was originally developed as part of the basic tier on the digital satellite platform that, at the time of the complaint, was being developed in the UK by British Sky Broadcasting Ltd. As the launching of the digital satellite service was delayed from the originally-planned Autumn 1997, the BBC decided to make BBC News 24 available also on the free-to-air network during night hours, and on the analogue cable infrastructure, while waiting for the digital satellite service.

According to the complainant, the financing of BBC News 24 by licence fees:
- would have constituted State aid in the sense of Article 87, as comprised of State resources,
- was unlawful, as it was not notified in accordance with the EC Treaty State aid rules,
- was not compatible with the common market, as it could not qualify for any of the exemptions provided for in Articles 87, paragraphs (2) and (3), and Article 86(2).

The Commission took a decision on 29 September 1999. In accordance with the jurisprudence of the Court, it decided that funds stemming from licence fees are in fact to be considered State aid in the sense of Article 87. Also, it found out that such aid was to be granted without prior notification and approval.

---

58 Case T-106/95 FFSA and others v Commission, [1997] ECR II-229
However, the Commission rejected the third allegation of the complainant, finding out that the State aid in question was compatible with the common market, as it is granted as compensation for the delivery of "services of general economic interest", as defined and entrusted by the UK authorities.

The Commission concluded that the four conditions set out by Article 86(2) are fulfilled. In particular, the Commission considered that the United Kingdom did not abuse its competence by defining a 24-hour news channel with the specific features described above as part of the public service remit for broadcasting. Also, it found that the BBC was entrusted with such public service task by means of an official act of the Government.

In addition, the financial means granted to the channel do not exceed its actual costs and are therefore proportionate to the public service.

Finally, the Commission concluded that trade within the EU is not affected by the creation and financing of BBC News 24 to an extent contrary to the common interest. In order to reach this conclusion, the Commission analysed the effect on the market of the UK decision to launch a 24-hour news service funded solely by the licence fee. It found out that competition is indeed affected by such decision, in that some competitors lost market share and revenues in consequence of the launching of BBC News 24.

However, the Commission considered that, according to Article 86(2), a certain distortion of competition has to be tolerated when a Member State decides to provide a service of general economic interest. Article 86(2) only requires such distortion not to be excessive, to an extent that it would preclude the development of trade in the sector concerned. The Commission considered this to be the case of BBC News 24, in that, although it gained some of its competitors’ market share, it did not make it impossible for competitors to continue operating on the market.

Therefore, since all the conditions of Article 86 (2) of the EC Treaty were met, the Commission decided that the funds from the licence fees dedicated to BBC News 24, although constituting State aid in the sense of Article 87, are compatible with the Treaty rules.

France - La Commission autorise l’octroi d’aides aux petites et moyennes entreprises par les collectivités territoriales françaises.

Le 22 décembre 1999, la Commission a décidé de ne pas soulever d’objection à l’égard d’un régime qui permettra aux collectivités territoriales d’accorder des aides aux PME pour des investissements matériels ou immatériels, ainsi que pour soutenir les efforts de protection de l’environnement. Ce régime est appelé à remplacer plusieurs régimes d’aides existants et précise le cadre juridique des interventions des collectivités territoriales françaises en faveur de leurs petites et moyennes entreprises. Les bénéficiaires en sont des PME définies conformément à l’Encadrement communautaire des aides d’Etat aux petites et moyennes entreprises 59.

La Commission a analysé les dispositions du régime et a conclu qu’il était conforme à l’Encadrement communautaire des aides d’Etat aux petites et moyennes entreprises et à l’Encadrement communautaire des aides d’Etat pour la protection de l’environnement 60. Les dispositions des Lignes directrices concernant les aides d’Etat à finalité régionale 61 sont également respectées.

Ainsi, en s’inscrivant clairement dans le cadre des dispositions applicables en matière d’aides d’Etat, le régime d’aide se conforme parfaitement au droit communautaire et assure une pleine transparence des interventions économiques des collectivités.

On 8 December 1999, the Commission approved a proposal to grant R&D aid to Dornier Luftfahrt GmbH. It considered that the aid, which takes the form of a State guarantee and was notified by the Federal Government in accordance with State aid rules, is compatible with the EC Treaty.

On 15 June 1999 the Federal Republic notified the Commission, under Article 88(3) EC, of its intention, together with the State of Bavaria, to guarantee a loan of up to USD 350 million (€ 350 million) to Dornier Luftfahrt GmbH to finance a development project. The Federal Government guarantees a maximum of USD 270 million (€ 270 million), while Bavaria guarantees a maximum of USD 80 million (€ 80 million). In each case the guarantee covers 80% of the loan volume.

The aid is granted for a R&D project which forms part of a wider project for the development of a new family of regional aircraft, including the 728JET and two variants, the 528JET and 928JET. The overall development costs far exceed the costs of the research and development project at issue here. The project covers the development of the technology needed for the 728JET and subsequently for the 528JET and 928JET. It can be classified as precompetitive development.

After examining this ad hoc aid in the light of the rules laid down in the EC Treaty, the Commission concluded that it is compatible with those rules and in particular with the Community framework for State aid for research and development.62

Italie - La Commission interdit l'octroi d'aides régionales en faveur de la Société Fiat pour son projet d'investissement dans son établissement de Mirafiori Meccanica.

Le 22 décembre 1999, la Commission a interdit l'octroi d'aides régionales d’une intensité de 4,6% en faveur d’un projet d’investissement mené par Fiat. La Commission a constaté que les aides en cause n’étaient pas nécessaires à la réalisation du projet de Mirafiori Meccanica.

L’encadrement automobile stipule que pour être compatibles avec le marché commun, les aides régionales doivent être nécessaires à la réalisation du projet d’investissement dans la région assistée concernée. Or, d’une part, l’étude de localisation qui a amené Fiat à choisir Mirafiori pour son investissement s’est déroulée vers 1993-1994, époque à laquelle Mirafiori n’appartenait pas encore à une zone assistée. Ce n’est qu’en mars 1995 que Mirafiori a été classée en région assistée au titre de l’article 87 paragraphe 3 alinéa c du Traité CE. Dès lors, Fiat n’a pas pu intégrer dans le plan de financement de son projet à Mirafiori l’obtention d’une aide régionale. D’autre part, la mobilité du projet n’a pas été suffisamment démontrée par les autorités italiennes. Mirafiori s’avère en effet l’unique site où Fiat a envisagé d’implanter son projet et aucun autre site crédible n’a été indiqué à la Commission. Les aides notifiées par l’Italie en faveur de Fiat Mirafiori Meccanica ne sont donc pas compatibles avec les principes de l’encadrement automobile stipulés par le Traité CE.

63 JO C 120 du 01.05.1999.
64 JO C 288 du 09.10.1999.
nécessaires pour atteindre les buts prévus par l'article 87 paragraphe 3 alinéa c du Traité CE, en l'espèce faciliter le développement de certaines régions économiques. Dès lors, ces aides s'avèrent incompatibles avec le marché commun et ne peuvent pas être octroyées.

COURT OF JUSTICE / COURT OF FIRST INSTANCE

DEVANT LE TRIBUNAL

Devant le Tribunal

Aff. T-112/99 Métropole Télévision - M6 e.a. Télévision française 1 SA (TF1) / Commission

Annulation des art. 2 et 3 de la décision de la Commission, du 3 mars 1999, relative à une procédure d'application de l'article 85 du traité
CE (IV/36.237 - TPS), en ce qu'elle ne prévoit pas une attestation négative ou, subsidiairement, une exemption d'une durée supérieure à trois ans concernant certaines des clauses contenues dans les accords portant création de la société de télévision par satellite (TPS)

**Aff. T-115/99**
**Société Système Européen Promotion (SEP) / Commission**
Annulation de la décision de la Commission, du 8 mars 1999, rejetant la plainte déposée par la requérante contre Renault France, Renault Nederland et Renault Autocenter et concernant des prétendues entraves aux importations parallèles des mandataires ainsi qu'une demande de retrait du bénéfice de l'exemption par catégorie aux contrats de distribution de Renault résultant du règlement (CE) n. 1475/95

**Aff. T-116/99**
**Ilmailulaitos / Commission**
Annulation de la décision 1999/198/CE de la Commission du 10 février 1999, relative à une procédure d'application de l'article 86 du traité (IV/35.767 - Ilmailulaitos/Luftfartsverket) concernant le système de rabais sur les redevances d'atterrissage dans les aéroports de Finlande

**Aff. T-126/99**
**Graphischer Maschinenbau GmbH / Commission**

**Aff. T-127/99**
**Diputación Foral de Álava / Commission**
Annulation de la décision C(1999) 498 final de la Commission, du 24 février 1999, relative à l'aide accordée par les autorités espagnoles à la société Daewoo Electronics Manufacturing España SA (DEMESA) dans la mesure où celle-ci déclare aides incompatibles avec le marché commun les avantages fiscaux octroyés par la «Diputación Foral de Álava»

**Aff. T-129/99**
**Comunidad Autónoma del País Vasco et GasteizkoIndustria Lurra SA / Commission**

**Aff. T-144/99**
**Institut des mandataires agréés près l'Office Européen des Brevets (IMA) / Commission**
Annulation partielle de la décision de la Commission, du 7 avril 1999, relative à une procédure d'application de l'article 81 CE (IV/36.147 : Code de conduite de l'IMA (EPI), en ce qu'elle concerne des dispositions du code de conduite de l'Institut des mandataires agréés auprès de l'Office européen des brevets (IMA) qui interdisent la publicité comparative ainsi que celles qui se réfèrent à l'offre de services aux utilisateurs qui ont déjà été clients d'autres mandataires

**Aff. T-148/99**
**Daewo Electronics Manufacturing España SA / Commission**

**Aff. T-152/99**
**Hijos de Andrés Molina SA (en liquidación) / Commission**
Annulation de la décision de la Commission C(1999) 41 final, du 3 février 1999, concernant l'aide accordée par le gouvernement espagnol en faveur de Hijos de Andrés Molina SA (HAMSA)

**Aff. T-161/99**
**Navigazione Libera del Golfo SpA / Commission**
Recours en carence visant à faire constater que la Commission s'est illégalement abstenue de prendre une décision suite à la plainte déposée par la requérante sur le fondement des articles 92 et 93 du traité CE (devenus articles 87 et 88 CE) relatives aux aides prétendument accordées par les autorités italiennes à l'entreprise publique CAREMAR

**Aff. T-168/99**
**Diputación Foral de Álava / Commission**
Annulation de la décision de la Commission (SG(99)D/2945), du 31 mars 1999, d'engager la procédure prévue au paragraphe 2 de l'article 93 du traité CE (devenu article 88 CE) en ce qui concerne l'aide accordée par les autorités espagnoles à la société Ramondin SA, dans la mesure où celle-ci considère aides incompatibles avec le marché commun les avantages fiscaux octroyés par la «Diputación Foral de Álava»

**Aff. T-170/99**
**RJB Mining plc / Commission**
Annulation d'une décision de la Commission, du 4 mai 1999, autorisant les interventions financières de l'Espagne en faveur de l'industrie houillère en 1999
Aff. T-175/99
UPS Europe SA / Commission
Annulation de la décision de la Commission, du 10 juin 1999, rejetant la plainte introduite par la requérante sur le fondement de l'article 82 CE et relative à l'acquisition partielle de DHL par la Deutsche Post AG

Aff. T-187/99
AGRANA Zucker GmbH / Commission

Aff. T-190/99
Sniace SA / Commission
Annulation de la décision de la Commission, du 28 octobre 1998, concernant l'aide d'État accordée par l'Espagne à la partie requérante, dans la mesure où elle qualifie d'aides d'État incompatibles avec le marché commun les accords de rachat partiels passés avec les autorités de la sécurité sociale ainsi que les accords passés avec le FOGASA (fonds de la protection sociale en cas d'insolvabilité du débiteur) sur le volume de vente de tickets de ladite compagnie aérienne

PLEASE HELP US TO KEEP YOU INFORMED

The EC Competition Policy Newsletter is available free of charge and is also available on our internet site at:

If it is impossible for you to access internet, and if you feel a continued subscription to the paper copy is essential, please fill in and mail this form. You may also use this form to notify us of a change of address. When advising of a change of address for an existing subscription, please add your subscription registration number in the space provided. (Your registration n° appears on the left of each mailing label, preceded by an 'O', eg: "O/………").

This sheet should be returned to the following address:

Commission européenne
DG IV – Cellule Information
C150, 00/158
Rue de la Loi 200
B – 1049 BRUXELLES
