

## **SUMMARY**

### **of the Opinion “Action Plan for the future of Organic Production in the European Union” – COM(2014)179 final and “On organic production and labeling of organic products, amending Regulation (EU) No XXX/XXX of the European Parliament and of the Council [Official controls Regulation] and repealing Council Regulation (EC) No 834/2007 – 180 final**

The Chamber of Deputies notices that, by the proposed plan and regulation, important improvements are brought to regulate the organic production in the European Union and they are in keeping with the situation of the sector in Romania. The useful information for the young consumers and children belongs to the same valuable initiatives of the European Commission and it is an important instrument meant to raise the awareness and to increase the trust in the system of the ecologic production.

Concerning the obligation of the Member States to assign a minimum of 30%, of the total contribution allotted to each rural development program, from the European Agricultural Fund for Rural Development, to implement measures in the fields of environment and climate, including measures for the organic agriculture, it is noted the risk of using this amount for other objectives, which are foreign to the environment and to the ecologic agriculture.

The European Commission should take measures in order to diminish this risk.
