Reuse of this document is authorised provided the source is acknowledged. The Commission's reuse policy is implemented by Commission Decision 2011/833/EU of 12 December 2011 on the reuse of Commission documents

The CEF elnvoicing Conformance testing Process Overview Description is intended for solution and service providers and public entities that need detailed instructions for using the Conformance testing Service. This document is to be used as an extension of the elnvoicing Conformance testing Service Offering Description (SOD).

1. How to use the Conformance testing Service step by step

This section describes the way users can use the CEF elnvoicing Conformance testing Service.

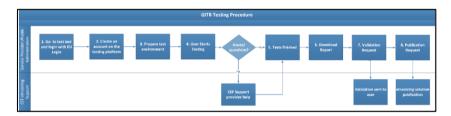

1.1. Public entities, solution and service providers and software owners

Public entities, solution and service providers and Solution Owners have the following responsibilities in the context of the CEF elnvoicing Conformance testing Service:

- Test the invoice compliance against the core invoice specifications;
- Perform the test as evidence for their INEA funded project;
- Provide (on a voluntary basis) details of their solution to the Service Desk, so that they are listed on the elnvoicing Conformant Solutions page.

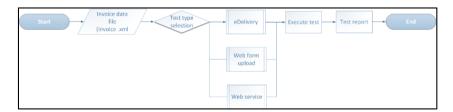

1.2. Process Overview

The figure below presents the main steps of the CEF elnvoicing Conformance testing Service process. Each process step is detailed in the next sections.

The figure below presents the technical options which any user can choose to apply for conformance testing. The sender scenario option starts with a file of an invoice in .xml format (hereafter called invoice.xml) issued by the user's system. Depending on the choice the user makes, he will need to perform the below steps (described on the picture).

These steps are described in the following sections.

Remark:

If tests are conducted for INEA grants purposes, it is necessary to use the eDelivery methods (AS4) for the test results, as only the eDelivery testing sessions are recorded in the TestBed and can be validated or downloaded at a later stage if needed.

1.2.1. Web form upload (only for sender scenario)

If the user chooses to apply for the Conformance testing Service via web form upload, he can request validation via uploading the invoice.xml file(s) through https://www.itb.ec.europa.eu/invoice/upload. This service is provided to all users (anonymous). Once the eInvoice is uploaded, it is validated and a detailed report is presented to the user, which can be downloaded and cross-checked against the submitted content.

1.2.2. Web service (only for sender scenario)

If the user chooses to apply for the Conformance testing Service via web service, he can request the validation of an invoice via a web service call to a GITB-compliant content validation service. The web service (WSDL) is available at:

https://www.itb.ec.europa.eu/invoice/api/validation?wsdl

To facilitate the use of the web service, the user needs to contact the <u>Service Desk</u> to obtain the relevant configuration files needed for the SOAP UI test case.

1.2.3. eDelivery

The eDelivery (AS4) option implies that at least one user is registered in the TestBed (see section §1.3.1 - Step 1: Registration).

eDelivery AS4 validation (For both sender and receiver scenarios)

- The user can choose to **send** an elnvoice for conformance testing via *eDelivery AS4*. If the message arrives successfully and the validation process is completed, the validation report can be checked or downloaded on the TestBed portal.
- The user can also choose to **receive** an elnvoice for conformance testing via *eDelivery AS4*. The testing platform (or TestBed) then sends an elnvoice to the user's AS4 gateway. In case the user needs certification for the successful receiver scenario for INEA grants, he is responsible for uploading the relevant pieces of evidence in the TestBed platform.

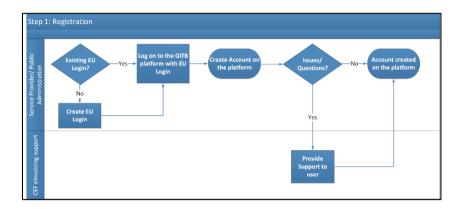

A test scenario can be executed after the user logged into the TestBed at https://www.itb.ec.europa.eu/cef/itb/#/login, using assigned credentials.

1.3. Processes steps for eDelivery (AS4) method

1.3.1. Step 1: Registration

Purpose: to register the user accounts and organisations/systems on the test platform. This registration is only required when applying for the Conformance testing Service via the <u>AS4 eDelivery</u> protocol.

The overview of the registration process is shown in the diagram below:

Process:

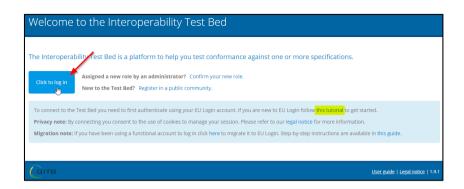

1. Open the TestBed Welcome page https://www.itb.ec.europa.eu/cef/itb/#/login

2. Login

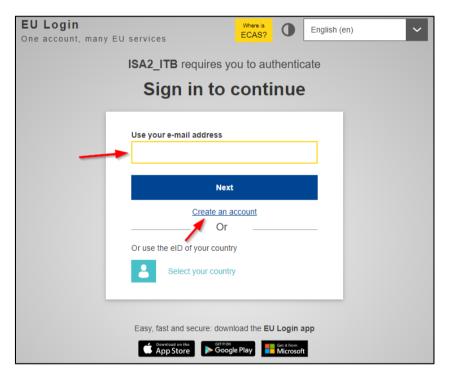

To be able to create an account on the GITB TestBed platform, the user must have an EU Login account. If the user does not have an EU Login account, he can create one on the EU Login page. If

the user needs more help regarding EU login, he can use the link to the <u>EU Login tutorial</u> on the TestBed Welcome page.

2.1. The user clicks on the **Click to log in** button:

2.2. The user provides his EU Login account credentials or creates his EU Login account:

3. Choose role/Create Organisation

3.1. If the user is already logged in but does not have any assigned role or registered Organisation, he clicks on the "Link a role to your account" button:

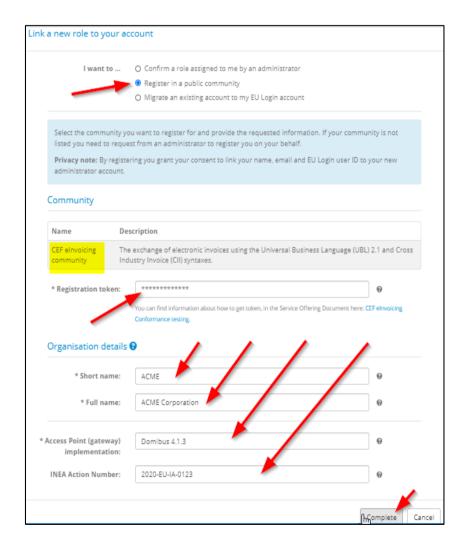

3.2. The user chooses the option Register in a public community

- 3.3. The user provides the **Token** for joining the **CEF elnvoicing community** (token: cefeinvoicing)
- 3.4. The user starts registering his organisation by filling the required fields.
 - Short name: a short name for his organisation to appear in reports;
 - **Full name:** the full name of his organisation;
 - Access Point (gateway) implementation: the AS4 software implementation and version he uses.
 - INEA Action Number: if the user's tests are initiated under an INEA action, this field is mandatory and should be filled with the INEA action number.

Remark: The parameters signed by "*" are mandatory, the test will not start if the user does not fill in the information

4. The user clicks on **Complete**:

4.1. The user chooses his new linked role by clicking on it

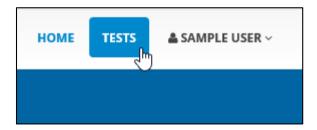

This completes the login process, and makes the user enter to the system as an organisation administrator.

1.3.2. Step 2: Preparation

Purpose: to prepare the test scenario on the TestBed.

- 1. The user logs on to the GITB platform on https://www.itb.ec.europa.eu/cef/itb/#/login with his EU Login.
 - For more information about EU Login, check §1.3.1 Step 1: Registration.
- 2. The user clicks on the **TESTS** button on the menu bar:

3. The user clicks on the **Create system** button:

4. The user fills in the details of the new system information and clicks on Save:

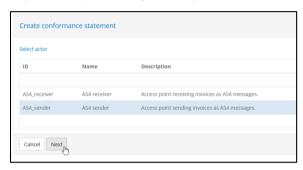

5. The user clicks on the newly created system:

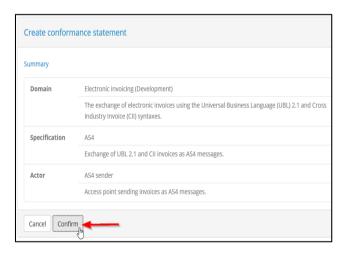

6. The user clicks on the **Create conformance statement** button:

- 7. The user chooses the actor for his scenario and clicks on Next:
 - SENDER scenario> AS4_sender
 The user's access point sends messages to the TestBed with the elnvoices he wants to test.
 - RECEIVER scenario> AS4_receiver
 The TestBed sends messages to the user's access point with sample elnvoices, so that he can test the reception and processing of compliant elnvoices in his elnvoicing system.

8. The user clicks on **Confirm** on the Summary screen:

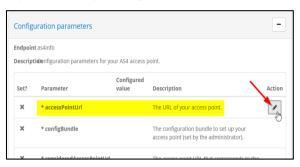

9. The test is now ready to be configured, the user clicks on the conformance statement created:

10. The user expands the Configuration parameters with the Visible/Hidden button:

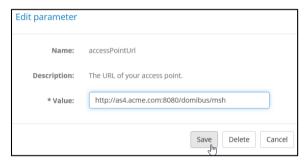

and sets the accessPointUrl parameter by clicking on the (edit) button:

11. The user inputs his Access Point public URL into accessPointUrl and clicks on Save:

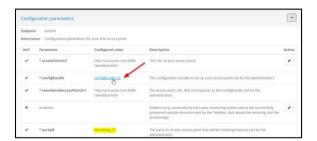

Remark: This is a mandatory parameter; the test will not start if the user does not fill in the information.

12. The user downloads his configuration package.

If the user saved his valid **accessPointUrl** parameter, the TestBed generates a Party ID and a configuration package for him.

The user refreshes the Tests page and expands the **Configuration parameters** until he finds the downloadable package in the **configBundle** parameter, then he clicks on it for downloading.

The user has now completed the preparation and continues with the execution as described in §1.3.3-Step 3: Execution & report feedback.

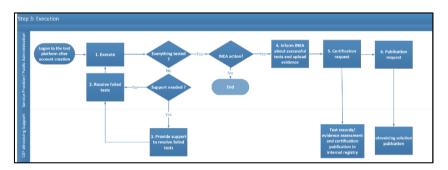

If the user needs support while conducting the test, he can contact the CEF eInvoicing team (CEF-EINVOICING-SUPPORT@ec.europa.eu). For contact information see also \$2 - Contact Information.

1.3.3. Step 3: Execution & report feedback

Purpose: to execute the conformance tests and generate a test report.

- 1. The user executes the conformance tests using the testing platform.
- 2. The user resolves the failed tests (with or without the support of the CEF elnvoicing Service Desk).
- 3. The CEF elnvoicing Service Desk provides technical support to the user during the execution of the conformance tests.
- 4. If the test was performed under an INEA action, the user requests certifying from the CEF elnvoicing Service Desk, once all conformance tests have successfully passed and the required evidence was uploaded.
- 5. If the user requested funding from INEA, the CEF elnvoicing Service Desk assesses the recorded test sessions and the provided evidence. If the results are found correct, the CEF elnvoicing Service Desk logs the successful test record in an internal register which is shared with INEA.
- 6. On a voluntary basis, the user can promote his solution on the CEF Digital elnvoicing page. To do so, the user must share the solution information with the CEF elnvoicing Service Desk (information listed on the page).

The overview of the Execution process is shown in the diagram below:

The user can validate an elnvoice once the registration and the preparation on the GITB platform are completed and when he has configured his Access Point and elnvoicing system. To do son the user shall download and use the configuration package that contains the required files (manual, sample SOAP project, a private key, a Pmode and a Truststore). The package can be downloaded from the configBundle parameter (see configuration section at § 1.3.2 - Step 2: Preparation -

Step 12.), which needs to be adapted to the user's environment. Non-Domibus users should use the Pmode as a guideline for setting up his environment.

- 1. The user logs on to the GITB platform at https://www.itb.ec.europa.eu/cef/itb/#/login with his EU Login account credentials.
 - For more information about EU Login, check §1.3.1 Step 1: Registration.
- 2. The user selects the required role (organisation) linked to his account.
- 3. The user clicks on the **TESTS** button.
- 4. The user selects the System created in the preparation phase.
- 5. The user selects the Conformance statement created in the preparation phase.

6. The user verifies that the configuration parameter was set correctly as described in the preparation phase (accessPointUrl) and that other mandatory parameters were generated successfully by the TestBed (configBundle, consideredAccessPointUrl, partyld).

The next steps depend on the chosen scenario of the Conformance statement:

Sender scenario:

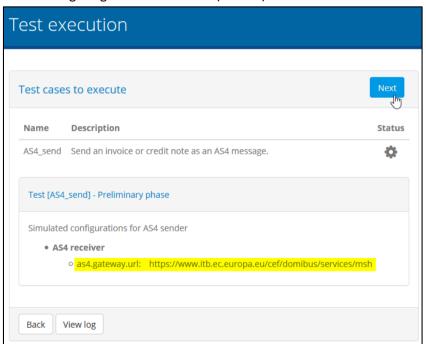

The user is the **sender** and will send an AS4 message using the eInvoice intended to be tested to the GITB TestBed which is the receiver.

1. The user chooses the only available Test Case (**AS4_send**) and opens it by clicking on the **Play** button:

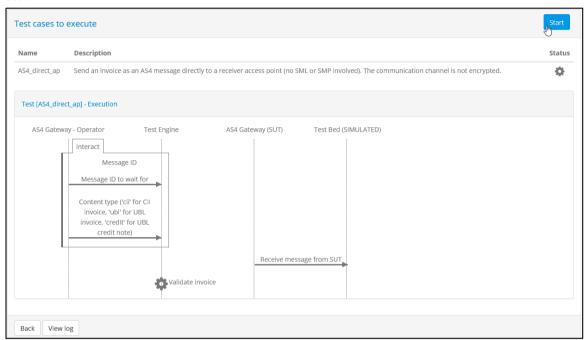

Remark: If any mandatory parameter is missing for the test, the user will get a list of missing parameters in the next screen instead of the screen below. The user must fill them before continuing with the further steps.

On the **Test execution** page, the user can find the required data he needs for configuring his AS4 access point. The user must note the **as4.gateway.url** of the TestBed (Receiver) Access Point. He will use this when configuring the PMode of his (Sender) Access Point.

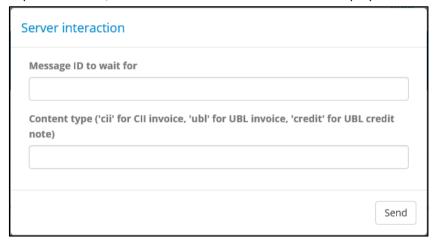

- The user updates (if needed) and installs the Pmode downloaded in the configuration package, at preparation phase on his (Sender) Access Point.
- The user installs the Truststore downloaded from the configuration package, on his (Sender) Access Point: by default, the Truststore password is set to "test123".

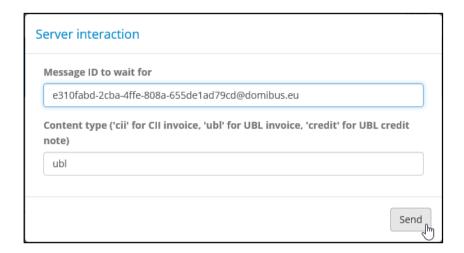

- The user installs the Keystore downloaded from the configuration package, on his (Sender) Access Point: by default, the Keystore password is set to "test123".
- 2. The user clicks on the **Next** button to complete and clicks on the **Start** button to start the test:

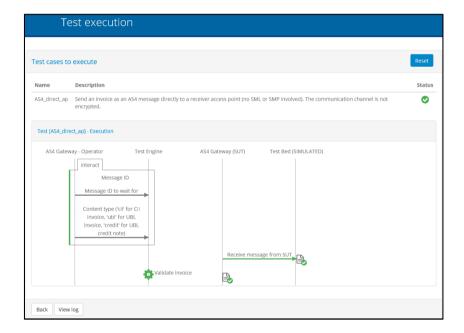

3. Once the process starts, the **Server interaction** screen will be displayed:

- 4. At this point the user can start his Access Point and send an AS4 message to the TestBed with the elnvoice in the attachment. If needed, he can use the SOAPUI project provided by the CEF elnvoicing Service Desk as a template.
- 5. The user writes down the resulting **messageID**.
- 6. The user inputs the messageID in the Gitb **Server interaction** screen, together with the chosen elnvoice format (cii or ubl) and clicks on **Send** to execute:

7. The test status will then be displayed. If all phases were successful, they will be displayed in **green** as shown in this successful test example below:

- 8. If any phase is marked with a red cross, this means it was unsuccessful. The user clicks on the document with the red x to get detailed information on the error.
- 9. If all phases are finished successfully, the user can check or download his report of the performed test. The user navigates back to the **Performed Tests page** to find his test results.
- 10. If the test was performed under an INEA action, the user should request certification from CEF elnvoicing Service Desk for INEA to accept his test results.
- 11. If the user's solution successfully passed all the Conformance testing and the results were certified, the user can promote (on a voluntary basis) his solution on the CEF Digital elnvoicing page. To do so, the user must share the solution information with the CEF elnvoicing Service Desk (information listed on the page).

Receiver scenario:

The user is the **receiver** and receives an AS4 message with a sample compliant elnvoice, from the GITB TestBed who is the sender.

1. There are multiple sample elnvoices in the GITB TestBed repository. The user can select any of them according to his need or his elnvoicing system requirements.

The user chooses any of the available Receiver test cases and opens it by clicking on the **Play** button:

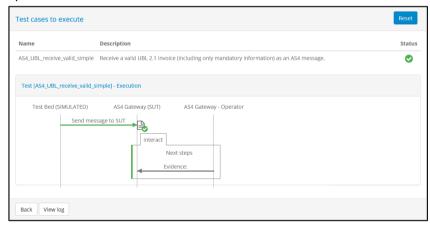

Remark: For INEA grants purposes, it is sufficient to fulfil one of the test cases.

Remark: If any mandatory parameter is missing for the test, the user will get a list of missing parameters in the next screen instead of the screen below. The user should fill them before moving to the next steps.

The user clicks on the **Next** button to complete and clicks on the **Start** button to start the test. The TestBed then sends the chosen sample eInvoice in an AS4 message to his Access Point.

2. If the message was received successfully, it will be displayed in **green** as shown in the successful test example below:

- 3. If any of the phases is marked with a red x, it means that is was unsuccessful. The user should click on the document with the red x to get detailed information on the error.
- 4. After successfully completing one of the receiving test scenarios, the user can check or download his report of the performed test. The user navigates back and opens the **Performed Tests page**, where he will find all his test results.
- 5. If the test was performed under an INEA action, the user should request the CEF elnvoicing Service Desk to certify the test results so that INEA can accept his test results.
 Note that CEF elnvoicing Service Desk will also request the user's test evidence of the processing of the received sample elnvoice to certify that the user's receiver action was

successfully completed. This test evidence can consist of screenshots from the user's **elnvoicing system**, where the sent sample elnvoices are successfully **processed** and where it is possible to identify the sample elnvoices on the picture.

The evidence files should be uploaded into the **evidence** parameter at the Configuration parameters section on the Tests page (see configuration section § 1.3.2 - Step 2: Preparation – *Step 13*). If the user wants to provide more than one file, he can put all his files together in a zip file.

6. If the user's solution successfully passed all the Conformance testing and the results were certified: on a voluntary basis, the user can promote his solution on the CEF Digital elnvoicing page. To do so, the user must share the solution information with the CEF elnvoicing Service Desk (information listed on the page).
