Deferred Credential

As an issuer, I want to enforce the deferred flow for the deferred credential from the issuer side. This means that when a participant requests the deferred credential, it will go through a specific deferred processing flow, resulting in a delay of 5 seconds from the first Credential Request. By implementing the deferred flow, the issuer can introduce a deliberate delay in providing the deferred credential.

CT_WALLET_CROSS_AUTHORISED_IN_TIME

Initiate Cross-Device Credential Issuance

As an issuer, I want to ensure that the in-Time credential goes through the in-time flow from the issuer side. This means that when a participant requests the in-Time credential, it will be processed and made available synchronously, without any delays. By implementing this in-time flow, participants can seamlessly obtain the in-Time credential without experiencing any significant wait times or processing delays. The synchronous availability of the credential ensures a smooth and efficient user experience.

CT_WALLET_CROSS_PRE_AUTHORISED_DEFERRED

Initiate Pre-Authorized Deferred Credential Issuance

As an issuer, I aim to facilitate the issuance of pre-authorized deferred credentials, enabling a streamlined process for participants who have been pre-approved. This approach involves processing the credential issuance at a later time, rather than immediately upon request. The pre-authorized deferred method allows for flexible and efficient management of credential issuance

Initiate Pre-Authorized In-Time Credential Issuance

As an issuer, I am committed to enabling the issuance of pre-authorized, in-time credentials, ensuring that participants who have already been approved can receive their credentials immediately and synchronously. This process underscores the importance of efficiency and immediacy in credential issuance for pre-approved participants, allowing them to access their credentials without any delays.

Implementing Pre-Authorised Flow for Credential Issuance

As an issuer, I want to enforce the pre-authorised flow for issuing Pre-Authorised credentials. This approach dictates that the credentials can only be issued to participants who have been authenticated via a pre-authorised code. The main objective is to ensure that only authenticated and authorised participants are able to receive the Pre-Authorised credentials, thereby enhancing the security and integrity of the credential issuance process.

ISSUE_TO_HOLDER_INITIATE_CT_WALLET_SAME_PRE_AUTHORISED_DEFERRED

Deferred Issuance of Pre-Authorised Credentials

As an issuer, my goal is to establish a pre-authorisation requirement for participants to receive specific credentials, with a deferred issuance process. This means that after participants are authenticated through a pre-authorised code, the issuance of the Pre-Authorised credential is scheduled for a later time, rather than being immediate. This approach ensures that the system verifies eligibility before issuance and provides flexibility in the timing of credential distribution.

Immediate Issuance of Pre-Authorised Credentials

As an issuer, I wish to streamline the process for issuing Pre-Authorised credentials by enabling an immediate issuance mechanism for participants who have been authenticated via a pre-authorised code. This ensures a swift and efficient delivery of credentials to eligible participants, enhancing their experience by eliminating unnecessary delays.

ISSUE_TO_HOLDER_VALIDATE_CT_WALLET_SAME_AUTHORISED_DEFERRED

Deferred and Validated Issuance of Authorised Credentials

The system is required to authenticate participants and then validate their compliance with predefined authorisation criteria. Only upon successful validation does the participant become eligible for the credential issuance, which is scheduled for a later time rather than occurring immediately. This deferred issuance approach allows for precise control over the credential distribution process.

Request CT Issue Qualification Credential from Conformance Issuer

As a participant requesting the CT Issue Qualification Credential from the Conformance Issuer, I anticipate the Conformance Issuer's response in the form of an ID Token challenge. This challenge is designed to fully assert control of the associated Decentralized Identifier (DID) and ensure the authenticity of the qualification process. Upon receiving the ID Token challenge, I will provide the required response, allowing the Conformance Issuer to validate my control over the DID.

REQUEST_CT_WALLET_QUALIFICATION_CREDENTIAL

CT Qualification through VP Exchange

As an issuer, I want to offer a CT Qualification Credential, which requires a Verifiable Presentation exchange. This exchange will involve receiving credentials from the same-device and/or cross-device test suites. By engaging in this Verifiable Presentation exchange, I can ensure that the exchanged credentials meet the necessary criteria. The received credentials from the same-device and cross-device test suites will collectively contribute to the CT Qualification Credential, enhancing the overall compliance and qualification of the issuer's offerings.
