About the service

The eDelivery team offers Training sessions and Deployment support of the eDelivery Components (Access Point, Service Metadata Locator and Service Metadata Publisher) to Public Administrations.

- **Training sessions:** during the training sessions, Public Administrations will learn about the technical specifications underpinning the components of eDelivery, the services offered by the European Commission and its sample implementations.
- **Deployment support:** the eDelivery team may also assist with the deployment of the eDelivery components in the environment of the Public Administration through interactive deployment sessions. It should be noted that the actual deployment remains the accountability and responsibility of the Public Administration installing the eDelivery components.
- **Demo Sessions:** The eDelivery team conducts demo sessions of eDelivery where it showcases the sending and receiving of messages using the AS4 protocol according to the eDelivery implementation guidelines.
- **Hands-on Experience:** It is possible to quickly install the Access Point sample software on a FIWARE platform for demonstration purposes. This, simple, first-hand experience will show two eDelivery Access Points exchanging messages. Documentation can be found below.

Users of the service

The eDelivery Training and Deployment service is intended for **Public Administrations** that deploy one or more of the eDelivery components: Access Point (AP), Service Metadata Locator (SML) and Service Metadata Publisher (SMP).

Benefits for the users of the service

The eDelivery Training and Deployment service is a well-balanced combination of information about the technical specifications, components and sample implementations of eDelivery as well as information about how to deploy them. This service has been designed to generate the following benefits to Public Administrations:

- Improved knowledge and skills on the eDelivery components through on demand training sessions
- Increased autonomy of the Public Administration in handling and maintaining the eDelivery components
- Reliability of the deployment with the support from professional European Commission staff
