The Once Only Principle
Increasing the protection of sensitive data

City of Monheim am Rhein, Germany
Citizens have access to a number of public services through a smartphone app, a smart card and a Web portal.

Introducing the Once Only Principle
This building block ensures that any citizen, institution or company who wishes to access public services, only needs to enter sensitive data in the City’s systems once. Then, it’s up to the Public Agencies to securely share and reuse that data, if needed.

A “secure by design” Data Infrastructure
All these services work thanks to a cross-functional Smart City platform, based on FIWARE technology, which puts data security and privacy first.
