Video: How ICT can improve joint replacement surgery

Joint replacement surgery is much more successful with the use of ICT and computational modelling. It also decreases the costs associated with subsequent joint revision surgeries and it improves the quality of life of patients following such procedures.

Find out how by watching this video.

This all has been made possible by the researchers of the MXL-project, which came to a conclusion the 19th of March. During the final review its progress was considered as excellent – all the objectives were fulfilled.

The MXL-project has been funded by the [European Commission's FP7 scheme](#) [1].
