A model for Assessment of Telemedicine Applications: MAST

Telemedicine applications could potentially solve many of the challenges faced by the healthcare sectors in Europe. However, a framework for assessment of these technologies is need by decision makers to assist them in choosing the most efficient and cost-effective technologies. Therefore in 2009 the European Commission initiated the development of a framework for assessing telemedicine applications, based on the users' need for information for decision making. This article presents the Model for ASsessment of Telemedicine applications (MAST) developed in this study. (International Journal of Technology Assessment in Health Care, 28 , pp 44-51 doi:10.1017/S0266462311000638)
