EventsBrussels, Belgium7 December 2012

# Workshop on Technology trends in the framework of the Study "Analysis of technology trends, future needs and demand for spectrum in line with Art. 9 of the RSPP"

The workshop will be conducted by Analysys Mason who is carrying out the Study "Analysis of technology trends, future needs and demand for spectrum in line with Art.9 of the RSPP" for the European Commission.

The workshop is open to all interested stakeholders and is an opportunity to provide input to the Study team. The Study is focussing on the demand side of spectrum inventory. The workshop will deal with several application groupings which are mentioned in the programme. Technological factors that are likely to have the most significant impact on the future demand for spectrum, should be identified for each application grouping. The technological factors will form a basis for a more detailed analysis of technology trends.

The results of the Study as well as the discussions in the workshop are expected to represent an important contribution to the Commission's ongoing work on spectrum inventory, as required by Article 9 of the Radio Spectrum Policy Programme (RSPP). The workshop is open to all interested stakeholders.

Registrations are open until Monday 3 December.

For more details, please download the programme of the workshop.

Organiser

Ales Brabinek
