Security and privacy in the digital world - Solutions from the Smart Security Industry

This conference is organized by Eurosmart, the association representing the Smart Security Industry for multi-sector applications. It will focus on 3 major topics: security of mobile devices, applications and transactions; smart embedded security for the Internet of Things; digital identity and access management for cloud based services. Speakers and panelists will discuss the options followed by the European Commission and public authorities to boost trust and security in online environments, with a special insight on the Digital Agenda actions. Eurosmart experts will further develop the solutions that the Smart Security Industry can offer to secure digital information and data transactions, innovate and support the digital economy in Europe.
