Cutting edge research on highly automated driving: Final Event of EU-funded research project HAVEit

After 3,5 years of intensive research in highly automated driving, HAVEit, the major EU-funded research project, will hold its final event in Boras, Sweden, on 21 June 2011. Automated driving could support drivers considerably, increase traffic safety and reduce the environmental impact of road transport. The project will demonstrate its findings using passenger cars, trucks and a bus.
