Ipv6 - The way forward

The main goals of this conference are to evaluate the deployment of IPv6, both in Europe and globally, and to plan new actions needed for wider IPv6 adoption, such as encouraging public administration, users and industrial stakeholders to take decisive steps to accelerate the implementation of IPv6. The event, organised by the European Commission under the Belgian Presidency, will involve several key stakeholders including representatives from public authorities, telecom operators, Internet Service Providers, the ICT industry and policy makers. Participation is free of charge and includes a complementary working dinner on 14 December. This event is part of the “Future Internet Conference Week”, offering a program of back-to-back conferences, meetings and workshops related to the different topics of interest to the organizations involved and their stakeholders.
