

Digital Single Market

EventsTokyo, Japan
29/11/2010 to 01/12/2010

Internet of Things 2010 Conference

This event will explore the technical requirements and business challenges of integrating physical items into today's internet. This Internet of Things shall be applied to address various societal challenges: health monitoring systems to support the aging society, distributed awareness to help predict natural disasters, transparency of transportation to reduce carbon footprint, product lifetime information to improve recyclability, and general visualization of processes to optimize efficiency.
