e-Skills: the international dimension and the impact of globalisation

The objective of this service contract is to study the international dimension of the e-skills strategy (especially the efforts to promote ICT professionalism) and to assess the impact of globalisation on high-level e-skills requirements (ICT practitioners' skills and e-leadership skills), as well as to analyse major policy initiatives and best practices in the world. This should help to understand better the international dimension of e-skills in order to better anticipate change, envisage possible future cooperation and improve efforts to develop e-skills for Europe.
