International Day of Persons with Disabilities : EU shows the way on e-inclusion

EU-funded high-tech research makes a reality of legal requirements and policy initiatives that aim at unlocking truly equal opportunities and rights for disabled citizens. Besides offering smart solutions to empower persons with disabilities, digital technologies are becoming the more and more necessary, when not the default channel, to access services and exercise one's basic rights. That is why giving to the 80 million Europeans with a disability the same access to ICT as all other citizens is imperative to counter the emergence of new digital divides and fully realise the EU's commitment to the UN Convention on the Rights of Persons with Disabilities, which is celebrated today across the world. Since 2007, the European Commission has earmarked more than 110 million euro for research into accessible and inclusive ICT. Thanks to such funding, pan-European teams of researchers, public authorities, disabled users and industry work together to deliver meaningful technology for disabled people in all life environments.
