Are you ready for eParticipation with PARTERRE?

Thanks to the CIP (ICT-PSP) project PARTERRE, a discreet and free of charge self-assessment tool is now available!

Having answered to a few questions, you will get structured advice on the potential and value of eParticipation tools for your territory/organisation.

The questionnaire is anonymous and you will be the only one to know about its results. At the end of the session, a printable summary will be created for your eyes only.

Answering all of the questions won't take you more than 20 minutes.

_ [1]

The PARTERRE project demonstrated and validated the business potential of novel e-participatory methods and tools for spatial and strategic planning at the European level, by leveraging on two fully blown ICT solutions: the Electronic Town Meeting – a deliberative democracy methodology and toolset combining the direct integration of small-groups discussion with the advantages of electronic communication, and the DEMOS-Plan – a solution for the management of participatory spatial planning.

Deployment has led to a number of interesting implications for the European public authorities, such as:

- building up of a cost effective ICT platform that enables regular or occasional consultation of remotely and sparsely located citizens and stakeholders;
- gradually migrating the whole administrative system related to spatial data infrastructure towards a full digitalisation of the “legally compulsory” exchanges between planning agencies, local stakeholders and the general public; and
- setting the stage for these two facilities to become practically interoperable to each other and across different EU Member States.
