# Roadshow to help SMEs in using Future Internet technologies

The Future Internet Public-Private Partnership (FI-PPP) will soon enter its third phase.

In that phase, 500-1000 SMEs and web entrepreneurs will be able to develop applications and services on top of platforms. These platforms are currently being developed and are e.g. specific for the electricity, gaming, or health domains.

To inform entrepreneurial communities about the mechanisms to get involved in the third phase, a number of information days are organised. Organisation is by Future Internet Forum members and other local organisations, with the participation of the European Commission.
