Study on "Challenges and opportunities of broadcast-broadband convergence and its impact on spectrum and network use"
SMART 2013/0014

Call for tenders26/06/2013

The goal of the Study is to explore future developments of the delivery of audio-visual (media) and internet (or data) services and the related implications for the evolution of terrestrial wireless access networks (platforms), related business models and spectrum management, in particular in the frequency range below 1 GHz. The study should take particular account of the competing demand for sub-1GHz spectrum by DTT and WBB, which has last resulted in the co-primary allocation of the 700 MHz band in the EU also to the mobile service at WRC-12.

Official Journal reference: 2013/S 122-208381
