Video: Games for stroke survivors

Games, being performed with a wearable hand robot, can help stroke survivors and other patients with their hand and wrist rehabilitation.

Look at the videos [here](#) [1].

The videos not only show the games and the robotic arm, they also show the portal, the user interface and a calibration procedure which ensures that the games are tailored to each individual's capabilities. The system can adapt to several degrees of impairment and has been developed by the EU funded SCRIPT project (scriptproject.eu [2]).
