ICT in 'Excellence Science'

'Excellent science' research will cover the radically new technological possibilities through the 'Future and Emerging Technologies', including FET Flagships, and the 'European research infrastructures' ('e-Infrastructures'). Within the new research programme, integrating more than ever research and innovation, Future and Emerging Technologies (FET) will go beyond its historical role of path-finding information technologies: it will open to all technologies thus strengthening its multidisciplinary aspects to turn Europe's excellent science base into a competitive advantage.
