Work out to catch up

Menu

Preterm infants have a higher risk for neurological damage. They are given rehabilitation sessions a few times a week but basic neuroscience indicates that it would be necessary to provide them with an early, intensive and multiaxial intervention. Researchers at the CareToy project want to achieve that in an easy, affordable and efficient way. They have developed a baby gym where preterm babies can be stimulated to rehabilitation techniques at home and with the mere presence of their parents.
