Standards for an Internet of Things: a workshop co-organised by DG Connect and ETSI

The overall objective of this workshop is to perform a "high level exploration through high level experts" of the requirements and implications of IoT, the relation between IoT and M2M, what standards are needed, and the business models they contribute to enabling as well as the policy issues triggered by "all things connected".

Workshop open to all! Registration required.

It intends to bring together different perspectives (industry from the supply and user sides, public policies, research, SDOs, national initiatives etc.) and explore how IoT technological building blocks will be assembled to create ecosystems - and how standards can support this.

Capitalizing on its work on Connected Objects (machine to machine) and the M2M platform, ETSI will act as a standardisation hub, in connection with relevant players on a global scale.
