New exhibition "GRAPHENE": opened Wednesday 25 June.(Gothenborg, Sweden)

First came the Stone Age, then the Bronze Age and Iron Age. And now we're heading for the Graphene Age!

That may be how we come to see this period in the future, when we look back on how the discovery of this material, graphene, changed our lives.

It is hard to imagine all the new technology that graphene may be used for.

We'll soon be seeing screens you can bend and ink that carries a current. And perhaps curtains will become unnecessary when you can make a window go dark at the flick of a switch.

[The EXHIBITION about graphene](#) [1] is financed by the [Graphene Flagship](#) [2] and [Chalmers](#) [3] University of Technology.
