

Digital Single Market

Call for tenders 25 June 2014

Up to 197,500 € for developing cross-border mhealth solutions

With an invitation to tender of nearly 200,000 €, the EU-funded DECIPHER project challenges companies to develop a mobile solution that enables patients to gain, from anywhere in the EU, safe, 24/7 access to their prescription data, emergency data, examination results and other health information.

[1]

The DECIPHER project, with partners in Finland, Italy, Spain and the UK, wants to find mobile solutions that will enable secure cross-border access to existing patient healthcare portals and make medical care more efficient and safe. This will especially be helpful for patients with chronic diseases or unplanned care episodes to manage their health.

Bidders are invited to tender under the pre-commercial procurement (PCP) procedure for the provision of research and development services.

DECIPHER ("Distributed European Community Individual Patient Healthcare Electronic Record") is funded under the European Commission 7th Framework Programme for research and technological development (FP7) and runs until 2016.
