

Standardized measures

A tool for more efficient
market surveillance on a
European level ?

Chris Van der Cruyssen
FPS Economy
DG Quality and Safety

Procedure reactive market surveillance

Level of intervention depending on risk category

Risk category	Level of intervention
Low Risk (but no conformity)	Producer (design stage)
Significant Risk	 Producer (stock)
High Risk	 Distributor
Serious Risk	 User 

Advantages of the standardized measures

- § The measures asked for do not depend on the person treating the case
- § Transparency
- § The cost of the measures is proportionate to the risk
- § Result:
 - only a few formal official measures each year
 - very high percentage of “voluntary” measures

Conclusion

- § Cooperation and exchange of information between authorities on a European level, are the key to success
- § Standardisation of **risk assessment** and **measures in relation to non conformities and risks** are tools
 - to facilitate efficient cooperation
 - to build confidence

Thanks for your attention !
