Version March 2016

EU LEGISLATION WITH GOOD LABORATORY PRACTICE (GLP) PROVISIONS

This document is meant purely as a documentation tool and the institutions do not assume any liability for its contents. Only European Union legislation printed in the paper edition of the Official journal of the European Union is deemed authentic.

1. INTRODUCTION..........................................................................................................................1

2. CHEMICALS ...............................................................................................................................2

3. BIOCIDES & PESTICIDES .........................................................................................................3

4. FOOD & FEEDSTUFF ..................................................................................................................4

5. MEDICINAL PRODUCTS ............................................................................................................6

6. COSMETICS .............................................................................................................................7

7. DETERGENTS ...........................................................................................................................8

1. INTRODUCTION

Good laboratory practice (GLP) is a quality system concerned with the organisational process and the conditions under which non-clinical health and environmental safety studies are planned, performed, monitored, recorded, archived and reported. Its purpose is to ensure the quality and integrity of the safety data submitted to regulatory authorities ('GLP receiving authorities').

The principles of GLP are applied to the non-clinical safety testing of test items contained in a range of products. The application of GLP is required by a variety of different product-specific legislation. This document lists all the EU legislation containing GLP provisions.
2. CHEMICALS

2.1. Directive 2004/10/EC (GLP)

Directive 2004/10/EC on the harmonisation of laws, regulations and administrative provisions relating to the application of the principles of good laboratory practice and the verification of their applications for tests on chemical substances is one of the two core EU GLP Directives together with Directive 2004/9/EC. It contains the principles of GLP in its Annex I.

Article 1(1) of the Directive requires that "Member States shall take all measures necessary to ensure that laboratories carrying out tests on chemical products, in accordance with Directive 67/548/EEC, comply with the principles of good laboratory practice (GLP)." Directive 67/548/EEC is the Dangerous Substances Directive, which is repealed by the CLP Regulation (listed below) from 1 June 2015.

Article 1(2) specifies that this requirement "shall apply also where other Community provisions provide for the application of the principles of GLP in respect of tests on chemical products to evaluate their safety for man and/or the environment." These other provisions are listed in this document.

2.2. Regulation (EC) No 1907/2006 (REACH)

REACH (Regulation (EC) No 1907/2006) is the Regulation on Registration, Evaluation, Authorisation and Restriction of Chemicals, which entered into force on 1 June 2007. It streamlines and improves the former legislative framework on chemicals of the European Union.

Article 13.4 of REACH Regulation (EC) No 1907/2006 requires that ecotoxicological and toxicological tests and analyses shall be carried out in compliance with the principles of good laboratory practice provided for in Directive 2004/10/EC or other international standards recognised as being equivalent by the Commission or the Agency.

Please note that no other international standards have been recognised to be equivalent to GLP. For further information, please refer to the relevant Q&A provided by the European Chemicals Agency (Q&A ID number 0117).

Annex XI of REACH (general rules for adaptation of the standard testing regime set out in annexes VII to X) provides for some exemptions for existing data in case that testing does not appear scientifically necessary.

For more information see also section R.4.2 (Reliability of information) in the Guidance on information requirements and chemical safety assessment.

The EU receiving authority for the REACH Regulation is the European Chemicals Agency (ECHA), which has been established to manage and in some cases to carry out the technical, scientific and administrative aspects of REACH. It receives the pre-registrations and registrations and will co-ordinate the evaluation, authorisation and restriction processes.

Article 8.4 requires that where the manufacturer, importer or downstream user carries out new ecotoxicological or toxicological tests and analyses, these shall be carried out in compliance with Article 13(4) of Regulation (EC) No 1907/2006 (REACH), which establishes that ecotoxicological and toxicological tests and analyses shall be carried out in compliance with the principles of good laboratory practice (see above).

Article 8.5 requires that where new tests for physical hazards are carried out for the purposes of this Regulation, they shall be carried out, at the latest from 1 January 2014, in compliance with a relevant recognised quality system or by laboratories complying with a relevant recognised standard.

For these tests for physical hazards, ECHA Guidance on the Application of the CLP Criteria (November 2013) specifies that the requirement in Article 8.5 can be interpreted as follows:

1. Compliance with the principles of good laboratory practice (GLP) (as formerly required by the DSD);
2. Application of EN ISO/IEC 17025 General requirements for the competence of testing and calibration laboratories as amended as a relevant recognised standard;
3. Other internationally recognised standards of comparable scope.

The EU receiving authority for Regulation (EC) No 1272/2008 is the European Chemicals Agency (ECHA).

3. **BIOCIDES & PESTICIDES**

3.1. **Regulation (EU) No 528/2012 (biocidal products)**

Regulation (EU) No 528/2012 sets the requirements for placing biocidal products on the market.

Annex II contains the information requirements for active substances:

"Tests performed should comply with the relevant requirements of protection of laboratory animals [...] and in the case of ecotoxicological and toxicological tests, good laboratory practice, set out in Directive 2004/10/EC [...] or other international standards recognised as being equivalent by the Commission or the Agency. Tests on physico-chemical properties and safety-relevant substance data should be performed at least according to international standards."

Please note that no other international standards have been recognised to be equivalent to GLP. For further information, please refer to the relevant Q&A provided by the European Chemicals Agency (Q&A ID number 0989).
3.2. Regulation (EC) No 1107/2009 (plant protection products)

Article 59(1) in chapter V of Regulation (EC) No 1107/2009 on data protection and data sharing requires that protection shall apply to test and study reports concerning the active substance, safener or synergist, adjuvants and the plant protection product, provided those tests were certified as compliant with principles of good laboratory practice (GLP).

Article 60(3) in chapter V of Regulation (EC) No 1107/2009 on the list of test and study reports requires that those lists shall include information on whether those test and study reports were certified as compliant with the principles of good laboratory practice.

Article 80(2) in chapter XI of Regulation (EC) No 1107/2009 refers to certain transitional measures.

Regulation (EU) No 283/2013 implementing Regulation (EC) No 1107/2009 as regards the data requirements for active substances and Regulation (EU) No 284/2013 implementing Regulation (EC) No 1107/2009 as regards the data requirements for plant protection products state that tests and analyses must be conducted in accordance with the principles laid down in Directive 2004/10/EC where testing is done to obtain data on the properties and/or safety with respect to human or animal health or the environment (Annex, introduction, point 2.1. for both Regulations).

The EU receiving authority for Regulation (EC) No 1107/2009 is the European Food Safety Authority (EFSA).

4. FOOD & FEEDSTUFF

4.1. Regulation (EC) No 429/2008 (feed additives)

Commission Regulation (EC) No 429/2008 of 25 April 2008 is the Regulation on detailed rules for the implementation of Regulation (EC) No 1831/2003 of the European Parliament and of the Council as regards the preparation and the presentation of applications and the assessment and the authorisation of feed additives. The objective of this Regulation is to ensure the use of safe and good quality feeding stuff, to facilitate trade, and to protect human health, animal health, and the environment.

Annex II on general requirements to be satisfied by the dossier provided for in article 3 of the Regulation requires that studies shall be performed and documented according to appropriate quality standards (e.g. Good Laboratory Practice (GLP)). Where in vivo or in vitro studies are carried out outside the Community, the applicant shall demonstrate that the facilities concerned comply with the Organisation for Economic Cooperation and Development (OECD) principles of Good Laboratory Practice or ISO standards.

The EU receiving authority for Regulation (EC) No 429/2008 is the European Food Safety Authority (EFSA). Further information on feed additives can be found on the website of the European Commission's Directorate-General for Health and Food Safety (DG SANTE).
4.2. Regulation (EU) No 234/2011 (food additives)

Paragraph 7 of the Commission Regulation requires that toxicological tests should be carried out in compliance with principles of good laboratory practice.

Article 5(7) on the general provisions on data for risk assessment requires that toxicological studies shall be conducted in facilities which comply with principles of good laboratory practice.

The EU receiving authority for Commission Regulation (EU) No 234/2011 is the European Food and Safety Authority (EFSA).

Further information on food additives can be found on the website of the European Commission's Directorate General for Health and Food Safety (DG SANTE).

4.3. Regulation (EU) No 503/2013 (GM food & feed)

Regulation (EU) No 503/2013 is an implementing regulation on applications for EU market authorisation of genetically modified food and feed.

Article 4 of this Regulation stipulates the following:

"Toxicological studies shall be conducted in facilities which comply with the:
(a) requirements of Directive 2004/10/EC; or
(b) ‘OECD Principles on Good Laboratory Practice’ (GLP), if carried out outside the Union.

Studies, other than toxicological studies, shall:
(a) comply with the principles of Good Laboratory Practice (GLP) laid down in Directive 2004/10/EC; or
(b) be conducted by organisations accredited under the relevant ISO standard."

4.4. Recommendation 97/618/EC (novel foods)

The Commission recommendation 97/618/EC of 29 July 1997 concerns the scientific aspects and the presentation of information necessary to support applications for the placing on the market of novel foods and novel food ingredients and the preparation of initial assessment reports under Regulation (EC) No 258/97.

Section 3.10 of the Commission recommendation 97/618/EC on allergenic potential specifies that studies to test the allergenic potential of novel foods should be compliant to principles of good clinical practice and good laboratory practice.

Moreover, Chapter XI of the Commission recommendation 97/618/EC on nutritional information on the novel foods requires that studies should be compliant to principles of good laboratory practice, in particular regarding the numbers involved in study groups.

The EU receiving authority is the European Food Safety Authority (EFSA).
5. MEDICINAL PRODUCTS

Paragraph 9 requires that non-clinical (pharmacotoxicological) studies shall be carried out in conformity with the provisions related to Good Laboratory Practice.

Section 2.2 Module 4 (Part III of the Commission Directive) on radio-pharmaceutical precursors for radio-labelling purposes requires that for single dose and repeated dose toxicity, the results of studies carried out in conformity with the provisions related to good laboratory practice shall be provided, unless otherwise justified.

5.2. Regulation (EU) No 536/2014 (clinical trials)

Article 25 of the Clinical Trial Regulation stipulates that "non-clinical information submitted in an application dossier shall be based on data derived from studies complying with Union law on the principles of good laboratory practice, as applicable at the time of performance of those studies."

Annex III of the Regulation requires the inclusion of "a statement of the good laboratory practice status or equivalent standards, as referred to in Article 25(3)" in the investigational medicinal product dossier (IMPD).

Prior to the application of the Clinical Trial Regulation, the Clinical Trial Directive (Directive 2001/20/EC) will continue to apply. This Directive does not contain any GLP requirements. However, the CT-1 guidance (Detailed guidance on the request to the competent authorities for authorisation of a clinical trial on a medicinal product for human use, the notification of substantial amendments and the declaration of the end of the trial) requires for the IMPD that "the protocols should meet the requirements of Good Laboratory Practice (GLP) guidelines where appropriate. The applicant should provide a statement of the GLP status of all studies."
5.3. Directive 2009/9/EC (veterinary medicinal products)

Paragraph 6 of Directive 2009/9/EC requires that pharmacological, toxicological, residue and safety tests shall be carried out in conformity with the provisions related to Good Laboratory Practice (GLP) laid down in Directive 2004/10/EC and Directive 2004/9/EC.

Chapter II on the presentation of particulars and documents specifies that each study report shall include a statement of compliance with good laboratory practice, if applicable.

6. COSMETICS

Article 10(3) of Chapter III on safety assessment establishes the following quality requirement:

"Non-clinical safety studies referred to in the safety assessment according to paragraph 1 and carried out after 30 June 1988 for the purpose of assessing the safety of a cosmetic product shall comply with Community legislation on the principles of good laboratory practice, as applicable at the time of performance of the study, or with other international standards recognised as being equivalent by the Commission or the ECHA."

To date, no other international standards have been recognised to be equivalent to GLP.

The receiving authorities for Regulation (EC) No 1223/2009 are the Member State competent authorities.
7. DETERGENTS

Regulation (EC) No 648/2004 of the European Parliament and of the Council of 31 March 2004 is the Regulation on detergents. The objective of this Regulation is to harmonise the rules for the placing on the market of detergents and of surfactants for detergents.

Recital 30 of Regulation (EC) No 648/2004 states that tests specified for the biodegradability of surfactants should be carried out in laboratories meeting an internationally recognised standard, namely EN ISO/IEC17025 or the principles of good laboratory practice.

Article 5(2) on the granting of derogation states that applications for derogation shall include a technical file supplying all the information and results of tests necessary for evaluating the safety aspects related to the specific use of surfactants in detergents failing to comply with the biodegradability limits. The tests shall be carried out on the basis of an approach defined in a technical guidance document, which will specify those tests for which the principles of good laboratory practice should be applied.

Article 7 on the testing of surfactants requires that tests on detergents shall be conducted in compliance with EN ISO/IEC standard or the principles of good laboratory practice, except for those tests for which the principles of good laboratory practice have been made mandatory.

Article 8(2) on the duties of Member States requires that each Member State shall notify to the other Member States and to the Commission the list of approved laboratories that are competent and authorised to carry out the tests required by Regulation (EC) No 648/2004. Member States have to demonstrate the competence of the above laboratories according to the standard EN ISO/IEC 17025 or verify the compliance of these laboratories with the principles of good laboratory practice.

Annex I defines standards of accreditation, good laboratory practice and animal protection concerning the laboratories that are competent and authorised to provide the necessary service for checking compliance of detergents with the requirements of this Regulation and its Annexes.

The receiving authorities for Regulation (EC) No 648/2004 are the Member State competent authorities.

Further information on detergents can be found on the website of the European Commission's Directorate-General for Internal Market, Industry, Entrepreneurship and SMEs (DG GROW).
