Introduction

[Regulation \(EC\) No 765/2008](#) of the European Parliament and of the Council setting out the requirements for accreditation and market surveillance relating to the marketing of products and repealing Regulation (EEC) No 339/93 was adopted on 9 July 2008 to regulate market surveillance activities. The Regulation's requirements have been applied since 1 January 2010. One of its purposes is to establish a system of enhanced market surveillance as regards the goods covered by the harmonized laws of the European Union and the principle of traceability. The Regulation requires the Member States to perform and organise market surveillance activities in accordance with the principle of subsidiarity; specifically, Member States are responsible for setting up internal administrative structures and for the planning of market surveillance activities in order to achieve the goals of the Regulation.

This document contains **a summary of Latvia's national sectoral market surveillance programmes for 2014**, according to the information submitted by market surveillance authorities and in line with the requirements of Article 18(5) of Regulation (EC) No 765/2008 of 9 July 2008 of the European Parliament and of the Council setting out the requirements for accreditation and market surveillance relating to the marketing of products and repealing Regulation (EEC) No 339/93. This lays down that *Member States shall establish, implement and periodically update their market surveillance programmes. Member States shall draw up either a general market surveillance programme or sector specific programmes, covering the sectors in which they conduct market surveillance, communicate those programmes to the other Member States and the Commission and make them available to the public, by way of electronic communication and, where appropriate, by other means.* In accordance with Article 18(5) of Regulation (EC) No 765/2008, the present document is to be submitted to the other Member States and the European Commission. In order to provide the public with information, an edited version of this document will be published on the website of the Ministry of the Economy¹.

Information on the sectoral market surveillance programmes for 2014 was prepared in accordance with the methodology drawn up by the Commission for the drafting of national market surveillance programmes in accordance with Article 18(5) of Regulation (EC) No 765/2008.

In accordance with Article 15 of Regulation (EC) No 765/2008, the market surveillance requirements prescribed by this Regulation shall apply to products covered by European Union harmonisation legislation (any substance, mixture, preparation or good produced through a manufacturing process other than food, feed, living plants and animals, products of human origin and products of plants and animals relating directly to their future reproduction). The sectoral market surveillance programmes described in this document therefore include information on the above-mentioned products.

Purpose of market surveillance

Latvia, as an EU Member State, must ensure that its market surveillance system complies with the requirements of the European single market and that only safe goods and services which comply with certain key requirements are available on the Latvian market. Market surveillance forms part of

¹ A version of the present document that does not contain any sensitive information which might affect the efficiency of the checks carried out by the surveillance authorities (e.g. type, timing and scope of checks, regions, sales points, etc.) can be found on the website of the Ministry of the Economy (<http://www.em.gov.lv/em/2nd/?cat=30587>).

the overall process of implementation of laws and regulations and serves as the main instrument for the surveillance of the safety of goods. Market surveillance is also a prerequisite for the normal functioning of both the internal market and the market economy. Market surveillance is performed in order to ensure equal protection of all persons in the territory of the EU, eliminating unfair competition and enhancing confidence in the market.

In accordance with Article 16(2) of Regulation (EC) No 765/2008, market surveillance shall ensure that products covered by Community harmonisation legislation which, when used in accordance with their intended purpose or under conditions which can be reasonably foreseen and when properly installed and maintained, are liable to compromise the health or safety of users, or which otherwise do not conform to applicable requirements defined in Community harmonisation legislation are withdrawn or their being made available on the market is prohibited or restricted. The public, the Commission and the other Member States are informed accordingly.

The main purpose of market surveillance is thus to protect consumers against risks and threats to their life, health and economic interests through an effectively functioning market surveillance system and successful fulfilment of duties of the parties involved (economic operators, consumers and state authorities). Effective market surveillance is essential for both protecting consumer rights and ensuring equal and fair competition, as it involves monitoring and checking the compliance of products and services available on the market and, if necessary, ensures that certain action is taken in the event of its being established that a product or service does not comply with the requirements.

The market surveillance system in Latvia

In Latvia, market surveillance is carried out by eight different bodies subordinated to five different ministries. Certain market surveillance functions are also performed by customs bodies controlling the flow of goods at the external border of the European Union. In 2000, a Market Surveillance Council was established to coordinate the work of these bodies. In accordance with its Statute, the aim of this consultative body is to ensure that market supervision institutions exchange ideas and information. The main task of the Market Supervision Council is to promote a common approach to market surveillance, the cooperation of market surveillance authorities with regard to unsafe goods and services, and the division of responsibilities between the market surveillance bodies to ensure that all goods are scrutinized and to prevent the duplication of functions. The Council convenes twice yearly, and its function of facilitating the exchange of information between market surveillance bodies is a crucial part of developing a common approach to market surveillance with a view to establishing an efficient market surveillance system which complies with the EU requirements.

In accordance with the Statute of the Market Surveillance Council, the Council shall submit market surveillance programmes and reports thereof drawn up in accordance with the requirements of Article 18 of Regulation (EC) No 765/2008 to the Ministry of the Economy to be summarized by the latter and submitted to the European Commission and the other Member States.

In Latvia, market surveillance functions are carried out by the following bodies:

- The [Consumer Rights Protection Centre \(CRPC\)](#)
- [The Food and Veterinary Service \(FVS\)](#)

- The [Health Inspectorate \(HI\)](#)
- The [Assay Office of Latvia \(AOL\)](#)
- [The Excise Goods Department of the State Revenue Service \(SRS\)](#)
- [The State Environmental Service \(SES\)](#)
- [The State Technical Supervision Agency \(STSA\)](#)
- [The State Plant Protection Service \(SPPS\)](#)

Certain market surveillance services are also provided by the following institutions:

- [The Customs Board of the State Revenue Service](#)
- [The State Police \(SP\)](#)

Fields of activity of the market surveillance authorities:

Fields	Body responsible for market surveillance
General safety of goods	All market surveillance authorities
Cosmetics	Health Inspectorate
Chemical substances, mixtures	Health Inspectorate; The State Environmental Service (production and professional use) The Excise Goods Department of the SRS
Chemical substances in products	Consumer Rights Protection Centre
Toys	Consumer Rights Protection Centre
Electromagnetic compatibility and low voltage	Consumer Rights Protection Centre
Textiles, glass and footwear	Consumer Rights Protection Centre
Noise and CO ₂ emissions	Consumer Rights Protection Centre
Aerosols	Consumer Rights Protection Centre
Transportable pressure equipment	Consumer Rights Protection Centre The State Railway Technical Inspectorate The State Police Road Traffic Safety Directorate and other institutions mentioned in the laws and

	regulations in the field of road transport control procedures.
Recreational craft	Consumer Rights Protection Centre
Fire safety products	Consumer Rights Protection Centre
Telecommunications network terminal equipment	Consumer Rights Protection Centre
Personal protective equipment	Consumer Rights Protection Centre
Gas appliances	Consumer Rights Protection Centre
Simple pressure vessels	Consumer Rights Protection Centre Road Traffic Safety Directorate
Pressure equipment	Consumer Rights Protection Centre
Machinery	Consumer Rights Protection Centre
Equipment and protective systems intended for use in potentially explosive atmospheres	Consumer Rights Protection Centre
Explosives and explosive devices for civil uses	The State Police
Fireworks and theatrical pyrotechnic articles	The State Police
Hot-water boilers fired by liquid or gaseous fuels	Consumer Rights Protection Centre
Construction materials	Consumer Rights Protection Centre
Medicinal products for human use	Health Inspectorate
Substances used in the illicit manufacture of narcotic and psychotropic substances	Health Inspectorate
Pharmaceutical products, including medicinal products for veterinary use and medicinal products for human use	The Food and Veterinary Service
Transport vehicles and their components	Consumer Rights Protection Centre
Fuel	The Excise Goods Department of the SRS
Tobacco	The Excise Goods Department of the SRS
Materials and articles intended to come into contact with food	The Food and Veterinary Service; Consumer Rights Protection Centre
Medical devices	Health Inspectorate
Active implantable medical devices	Health Inspectorate
<i>In vitro</i> diagnostic medical devices	Health Inspectorate
Tractors and their trailers	The State Technical Supervision Agency
Measuring instruments, including non-automatic weighing instruments	Consumer Rights Protection Centre
Pre-packaged products	Consumer Rights Protection Centre
Fertilisers	The State Plant Protection Service
Professional sunbed equipment	Health Inspectorate
