The European Construction Sector Observatory, together with the three roundtables, will bring together the foremost experts in the construction sector. The three roundtables will focus on the latest information about climate change and its impact on the construction sector. The roundtables will be held on 7-8 October 2021, in Budapest, Hungary, and will conclude on 24 September. Additional information will be sent to participants.

The study has assisted the European Commission in the development of the study on circular economy principles. The study has focused on the analysis of potential synergies with existing EU energy efficiency directives. The study has also examined the service life of buildings, facilitated the use of data in BIM models, and emphasised the importance of minimising their negative health effects.

Despite not reaching its original targets of reducing the use of harmful materials, critical asbestos asbestos processing plants have been cleared of asbestos. Furthermore, the Polish government initiative to remove and neutralise asbestos has increased significantly. Information projects were launched, and the use of wood materials in construction has increased, increasing the uptake of wood in new construction as well as the use of lumber in existing construction projects. Wood Plan II was introduced to best respond to new demands and requirements. To keep you aware, please track the inventory of harmful materials, and critical asbestos asbestos processing plants. The Polish government initiative to remove asbestos has increased significantly.

Our new Analytical Report is available now for you to download, providing insights on European construction-related policies. Five New policy Fact Sheets are online. These Fact Sheets were created to best respond to new demands and requirements. To keep you aware, please track the inventory of harmful materials, and critical asbestos asbestos processing plants. While asbestos processing plants have been cleared of asbestos, the use of wood materials in construction has increased, increasing the uptake of wood in new construction as well as the use of lumber in existing construction projects. Wood Plan II was introduced to best respond to new demands and requirements. To keep you aware, please track the inventory of harmful materials, and critical asbestos asbestos processing plants. Despite reaching its original targets of reducing the use of harmful materials, critical asbestos asbestos processing plants have been cleared of asbestos. Furthermore, the Polish government initiative to remove and neutralise asbestos has increased significantly. Information projects were launched, and the use of wood materials in construction has increased, increasing the uptake of wood in new construction as well as the use of lumber in existing construction projects. Wood Plan II was introduced to best respond to new demands and requirements. To keep you aware, please track the inventory of harmful materials, and critical asbestos asbestos processing plants.

Five Policy Fact Sheets (PFS) are available and focus on policies in Finland, France, Italy, Poland, and Slovenia. The late payment infographics provide an overview of the most relevant indicators, from the causes, to the construction-specific indicators necessary to support policy decisions. The Observatory on Late Payments will monitor the situation of late payments, putting increasing pressure on the industry. COVID-19 has been a catalyst for change, forcing the industry to pivot and move forward. Industry experts agree that there is great potential for the development of the EU construction sector, and policymakers are keen to address other issues in the construction sector including investment in sustainability.

Information projects were launched, and the use of wood materials in construction has increased, increasing the uptake of wood in new construction as well as the use of lumber in existing construction projects. Wood Plan II was introduced to best respond to new demands and requirements. To keep you aware, please track the inventory of harmful materials, and critical asbestos asbestos processing plants. Nonetheless, supporters of the Home Plan boast expected targets. In fact, data shows a decline in the service life of buildings, facilitating the use of data in BIM models, and emphasising the importance of minimising their negative health effects.
