the process of reduction of energy use in new construction projects. A key initiative of the European Commission and the European Construction Sector Observatory (ECSO) was the Public Private Partnership (PPP) established under the Horizon 2020 programme between the European Commission and the European construction industry. The purpose of ECSO is to develop, coordinate and provide an analysis of key figures, macroeconomic indicators, economic drivers, issues and solutions to the construction sector in Europe. ECSO would like to invite you to participate in our feedback survey.

The EU has set up an e-business portal to support the coordination of export support services and problem-solving services for SMEs. As part of the single market programme, the EU has introduced a harmonised framework for customs procedures and trade integration in the Single Market. The purpose of this framework is to simplify the obligations of all businesses, both domestic and foreign, to remove or prevent any obstacles to this freedom of movement.

Measures that take these factors into account successfully help to strengthen the EU single market.

In 2018, the Latvian Government introduced an e-business portal to support exporters. This portal provides an online platform for small and medium-sized enterprises (SMEs) to access information, targeted support and offers. This portal has been very successful and has helped many SMEs to export their goods.

The Danish government has also implemented a similar portal, which has been effective in supporting SMEs to access international markets. The portal has been well-received by SMEs and has helped many businesses to increase their exports.

Overall, the EU is making significant progress in implementing a harmonised framework for customs procedures and trade integration in the Single Market. This framework is helping to strengthen the EU single market and is expected to continue to do so in the future.
