## LIFE REstore final conference on management of degraded peatlands

"Sustainable Management of Degraded Peatlands and Climate Change Mitigation"

This final event from the project LIFE REstore covers:

- the influence of differently managed peatlands on climate change mitigation;
- how to develop national GHG emission factors;
- after-use of peatlands affected by peat extraction and recommendations on how they can be managed sustainably;
- how to include assessment of ecosystem services in the planning of future use of degraded peatlands.

It will include demonstrations of the project's database and optimisation methods, and a field trip to demonstration sites where after-use measures were put into practice.

Location: University of Latvia, Riga
