(1) I TA = I and Tame Asserted	1 2										(2) Data as			

1. Output

In February, **industrial confidence** reached a new record low (of -36). The decline (by -2) was less marked than in previous months, however the biggest from all ESI components. The drop was mainly driven by a significant decline in order books, which together with production expectations reached another historical low, suggesting that manufacturing output could remain weak also in 09Q1.

In December 2008, **industrial production** fell by 2.6% month-on-month (mom) and 12% year-on-year (yoy). All product categories decreased (mom), with exception of the energy component. Industrial output recorded a decrease in all the largest euro-area economies.

According to Eurostat's first release, euro-area **GDP** contracted by 1.5% quarter-on-quarter (qoq) in 08Q4, confirming the flash and in line with the Commission's Interim forecast. This is the third consecutive contraction, after -0.3% in 08Q2 and -0.2% in 08Q3. As to breakdown, the contraction was broad-based with sizable falls in all components, except stocks. GDP contracted in most of the largest economies, (DE -2.1%, FR -1.2%, IT -1.8% and ES -1.0%). Compared to the same quarter of the previous year, euro-area GDP growth in 08Q4 came in at -1.3%. For 2008 as a whole, GDP grew by 0.8% in the euro area, after 2.6% in 2007.

According to the **Commission's January 2009 Interim forecast,** GDP is expected to decline by less than 2% in 2009, followed by a gradual recovery in 2010 (to around ½%). Consumer-price inflation is expected to fall from 3.3% in 2008 to about 1.0% in 2009 and just below 2% in 2010.

2. Private consumption

After being flat in previous two quarters, **private consumption** deteriorated significantly in 08Q4 with a negative reading of -0.9% qoq. This is the worst performance since the start of EMU. Contracting retail sales, sluggish disposable income growth and deteriorating labour markets weighted on household spending.

In February, euro-area **consumer confidence** fell once again, reaching its lowest level (-33) since the start of the series in 1985, while the long-term average is at -12. The indicator was dragged down mainly by rising concerns of households about the future employment situation and their perception of the general economic situation.

In December, the **volume of retail trade** declined slightly (by -0.3%), after a similar decline of -0.1% in November. The **retail trade confidence** rebounded somewhat in February from its lowest reading since March 1993 recorded last month (from -19.6 to -19.0).

3. Investment

Gross fixed capital formation declined markedly by -2.7% qoq in Q4, after previous declines of -1.2% in Q2 and -0.6% in Q3. Sluggish demand, decreasing profits, falling capacity utilisation and still tight financing conditions have led firms to drastically reduce investment plans. On the annual basis, investment fell by -3.3% in O4.

Capacity utilisation has fallen sharply in the first quarter of 2009, from 81.6 in 08Q4 to 75 in 09Q1, its lowest level since the start of the series in 1985.

4. Labour market

In January 2009, the euro-area **unemployment** rate rose to 8.2%, compared with 8.1% in December 2008. It was 6.8% in January 2008. As to the country breakdown, most Member States reported increases in their unemployment rate. In particular, the largest increase was noted in Spain and Ireland, both up by +0.5pp. The so far resilient German labour market showed the first signs of worsening in January, as the unemployment rate increased from 7.2% in December to 7.3% in January.

According to Eurostat's estimate, the number of persons employed in the **euro area** decreased by 0.1% (80,000 persons) in 08Q3 compared with 08Q2, the first contraction since early 2004. Compared with 07Q3, the increase in employment was 0.8% in 08Q3, implying a continued gradual deceleration.

In February 2009, **employment expectations** fell sharply in both manufacturing and services sectors. **Consumers' unemployment expectations** have deteriorated as well (to 62), overtaking the previous record of 60. The level of **labour shortages in manufacturing** decreased in 09Q1, with only 4% of firms reporting that unfilled job openings were constraining production (compared to 5.7% in 08Q4).

5. International transactions

The assessment of **export order books** recorded yet another large decline in February (from -49 to -58). The indicator is currently well below its long-term average of -18. The seasonally adjusted **euro-area trade balance** with the rest of the world brought the eight consecutive deficit in December (of -0.3bn Euro),

bringing the euro-area trade in 2008 to a deficit of -32.1 bn euro (+15.8 bn in 2007). In 08Q4, **exports of goods and services** in volume fell by -7.3% qoq, while **imports** decreased by -5.5%. As a result, net trade subtracted one full pp from qoq GDP growth in 08Q4.

In December 2008, the working-day and seasonally adjusted **current account** of the euro area recorded a deficit of EUR 7.3 billion. In the **financial account**, combined direct and portfolio investment showed net inflows of 1 bn Euros in December 2008, owing to net inflows in portfolio investment that were almost entirely compensated for by net outflows in direct investment. In 2008 as a whole, the working-day adjusted deficit of the euro-area current account amounted to 63.2 bn Euros (about 0.7% of GDP).

6. Prices

According to the Eurostat's flash estimate, annual inflation in February edged up to 1.2%. The euro-area **HICP inflation** was 1.1% in January, its lowest level in almost ten years and down from 1.6% in December. **Core inflation** is gradually easing, from 2.1% in December to 1.8% in January.

After a sharp drop in **oil prices** in the second half of 2008, prices have been relatively stable since the beginning of the year. Two off-setting elements weighted on prices, the supply cuts by OPEC and the intensified concerns that the recession in the global economy will further reduce demand for oil. Crude oil is currently trading at about 44.6 USD/bl., a level significantly below the record-high of mid-July 2008 (146 USD/bl. on 4 July).

Industrial producer prices posted the 5th consecutive mom decline in December (-1.3%). Producer prices are decelerating fast: the yoy growth rate was 6.2% in 2008, 3.8% in 08Q4 and only 1.8% in December.

7. Monetary and financial indicators

On 5 March, the ECB decided to lower its **policy rate** by further 50bps to 1.5%. The 3-month interbank rates (Euribor) fell to 1.8% (4 March), down from 2.86% at the start of the year. Supported by the central bank's rate cut, the interbank lending rates and spreads have decreased remaining however at still rather elevated levels as compared to the pre-crisis situation. The US Federal Reserve lowered its target interest rate from 1.0% to a target range of 0-0.25% on 16 December 2008. The US 3-month interest rate was at 1.27% on 3 March, easing significantly from 2.2% at the beginning of December.

The **bond yields** in both the euro area and the US have been on a downward trend since mid-June due to weaker economic data and volatile and declining stock markets leading to stronger demand for safer assets. However, more recently, in the euro area, sovereign bonds fluctuated amid concerns about sovereign default risk, and persistently fragile macro-economic and financial conditions. Sovereign bond spreads widened on the back of the downgraded sovereign credit rating for several Member States (Spain, Portugal, Greece). The euro-area ten-year interest rate increased from 2.9% at the start of the year to 3.14% on 4 March 2009 (it was 4.61% on June 18). The US ten-year interest rate went up to 2.9% on 3 March (from 2.2 at the turn of the year), still significantly lower than the most-recent high of 4.27% in June.

According to the ECB, the annual rate of **growth of M3** decreased further to 5.9% in January 2009 from 7.5% in December 2008. The 3-month moving average declined to 7.0%. The annual rate of growth of **loans to private sector** decreased to 5.0% in January, after 5.8% in December. Loan growth to **households** witnessed another record low in January (at 1.2%, down from 1.6% in December), while loans to **non-financial corporations** still show relatively robust, though already decelerating growth (down from 9.5% to 8.8%). However, on the net-flow basis, both the lending to non-financial corporations as well as the lending to households recovered somewhat in January from the record low in December, from -13 to 30 bn euros and from -27 to -3 bn euros respectively.

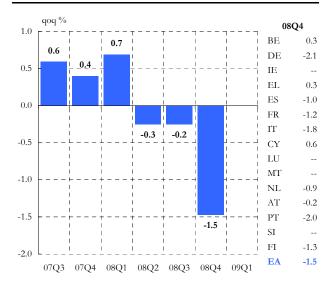

After strengthening in the first half of 2008, the nominal effective **exchange rate** of the euro (NEER) began to weaken in August. The downward pressure intensified in October and November, largely reflecting a reassessment of the economic situation in the euro area in relation to other economic regions. After strengthening somewhat at the turn of the year, the euro has depreciated since then. On 3 March, the euro was trading at 1.26 against the dollar and 123.5 against the ven.

In February, the **stock price indices**, such as Dow Jones, Eurostoxx and Nikkei, declined on average by 7 to 9% compared to January, a similarly large decline as in January. The markets turned to be very volatile, reflecting changes in the mood amid the released data. However, overall during February the negative assessment prevailed with respect to both, the company earnings reports and the general economic outlook in all the main regions.

Euro-area Indicators as from 2009 refer to Belgium (BE), Germany (DE), Ireland (IE), Gre (GR), Spain (ES), France (FR), Italy (IT), Cyprus (CY), Luxembourg (LU), M (MT), the Netherlands (NL), Austria (AT), Portugal (PT), Slovenia (SI), Slovakia (SFinland (FI).						
Indicator	Note	Source				
	1. Output					
Economic Sentiment Indicator	The economic sentiment indicator is the weighted average (of the industrial confidence indicator (40%), the services confidence indicator (30%), the consumer confidence indicator (20%), the construction confidence indicator (5%) and the retail trade confidence indicator (5%)). Data are seasonally adjusted.	DG ECFIN				
Industrial confidence indicator	The industrial confidence indicator is the arithmetic average of the balances (%) referring to the questions on production expectations, order books and stocks (the latter with inverted sign) from the survey of manufacturing industry. The long-term average refers to the period as from publishing of the indicator up to now. Data are seasonally adjusted.	DG ECFIN				
Services confidence indicator	The services confidence indicator is the arithmetic average of the balances (%) referring to the questions on business situation and recent and expected evolution of demand from the survey of services. The long-term average refers to the period as from publishing of the indicator up to now. Data are seasonally adjusted.	DG ECFIN				
Industrial production	Monthly Production Index (2000=100), NACE Rev.1 C-D-E, Total industry (excluding construction). Mom % ch. and qoq% ch. are seasonally adjusted, yoy% ch. are working-day adjusted.	Eurostat				
Gross domestic product	Gross domestic product at constant market prices (chain-linked volumes, reference year 2000), EUR. Data are seasonally and working-day adjusted.	Eurostat				
Labour productivity	Labour productivity defined as the difference between GDP growth and employment growth.	Eurostat				
GDP divergence	Standard deviation of GDP growth of the following countries: BE, DE, ES, FR, IT, CY, LU, NL, AT, PT, SI, FI.	Eurostat				
	2. Private consumption					
Consumer confidence indicator	The consumer confidence indicator is the arithmetic average of the balances (%) referring to the questions on the financial situation of households, general economic situation, unemployment expectations (with inverted sign) and savings; all over next 12 months. The long-term average refers to the period as from publishing of the indicator up to now. Data are seasonally adjusted.	DG ECFIN				
Retail confidence indicator	The retail confidence indicator is the arithmetic average of the balances (%) referring to the questions on the present and the future business situation and the volume of stocks (with inverted sign). The long-term average refers to the period from publishing of the indicator up to now. Data are seasonally adjusted.	DG ECFIN				
Private consumption	Household & NPISH final consumption expenditure at constant market prices (chain-linked volumes, reference year 2000), EUR. Data are seasonally and working-day adjusted.	Eurostat				
Retail sales	Retail trade (NACE Rev.1 52) excluding motor vehicles, motorcycles; Deflated turnover, mom % ch. and qoq% ch. are seasonally adjusted, yoy% ch. are working-day adjusted.	Eurostat				
	3. Investment					
Capacity utilization	In percent of full capacity in the manufacturing sector. Data are seasonally adjusted (collected in January, April, July and October).	DG ECFIN				
Production expectations	Production expectations in manufacturing sector. Data are seasonally adjusted.	DG ECFIN				
Gross fixed capital formation	Gross fixed capital formation at constant market prices (chain-linked volumes, reference year 2000), EUR. Data are seasonally and working-day adjusted.	Eurostat				
Equipment investment	Gross fixed capital formation at constant market prices (chain-linked volumes, reference year 2000), EUR, metal products, machinery and transport equipment. Data are seasonally and working-day adjusted.	Eurostat				
Construction investment	Gross fixed capital formation at constant market prices (chain-linked volumes, reference year 2000), EUR, construction work and housing. Data are seasonally and working-day adjusted.	Eurostat				
Change in stocks	Changes in inventories and acquisitions less disposals of valuables (at prices of previous year).	Eurostat				
Profit share	Ratio of nominal gross operating surplus and gross mixed income to nominal GDP	Eurostat				

	4. Labour market	
Employment expectations (manufacturing)	Managers' employment expectations over the next three months in the manufacturing sector. Data are seasonally adjusted.	DG ECFIN
Employment expectations (services)	Managers' employment expectations over the next three months in the services sector. Data are seasonally adjusted.	DG ECFIN
Employment expectations (whole economy)	Weighted average of managers' employment expectations over the next three months in the manufacturing (19%), services (65%), construction (6%) and retail sectors (10%). Weights in brackets according to value-added share on GDP of the respective sector. Data are seasonally adjusted.	DG ECFIN
Employment	Total domestic employment (number of persons). Data are seasonally and working-day adjusted.	Eurostat
Compensation of employees per head	Nominal compensation of employees divided by the number of employees. Data are seasonally and working-day adjusted.	DG ECFIN
Unemployment expectations	Consumers' unemployment expectations over the next twelve months. Data are seasonally adjusted.	DG ECFIN
Unemployment rate	Harmonized unemployment rate (in percent of labour force), ILO definition. Data are seasonally adjusted.	Eurostat
