(1) LTA=Long-Term Average

(2) Data available until date of update

1. Output

According to the Eurostat's first estimate, euro-area **GDP** in 10Q1 increased by 0.2% quarter-on-quarter (q-o-q), after a stable 09Q4. On a year-on-year (y-o-y) comparison, GDP was growing by 0.5%, following 5 quarters of contraction. Among the largest euro-area economies, growth in 10Q1 increased by 0.1% q-o-q in France and Spain, by 0.2% in Germany and more markedly in Italy (+0.5%). As the release is only a flash estimate, GDP components are not yet available.

According to the **Commission's spring forecast**, the euro-area economic recovery is underway, although it is set to be a gradual one. GDP growth is expected to average at about 0.9% this year, a modest upward revision compared to the autumn forecast in light of the improved external environment. Growth is expected to regain ground more firmly by the end of 2010 only. This is related to the still very low level of capacity utilisation, deleveraging and heightened risk aversion that hold back investment, and restrain private consumption growth.

ECFIN business surveys data for May 2010 should be interpreted with caution as they were for the first time classified according to an updated version of the Nomenclature of Economic Activities (NACE rev.2), whereas data up to April 2010 are based on NACE rev.1. On the whole these level shifts did not affect the direction of changes, but their magnitudes. **Industrial confidence** rose for the 14th consecutive month in May, mainly driven by considerably better order books and a somewhat smaller rise in production expectations. In a long-term perspective, industrial confidence has improved markedly since the March 2009 record low, and the current level is for the second month higher than the long-term average.

In March 2010, **industrial production** increased by 1.3% month-on-month (m-o-m) compared to 0.7% rise in February. Production experienced a strong year-on-year (y-o-y) growth of 6.9%. Moreover, on a quarterly basis it rose by almost 4.0%, the highest increase since the start of the series in early 1990s. As to the biggest economies, growth of industrial production was very strong in Germany (2.6%) and Spain (2.1%), robust in France (1.0%) and slightly negative in Italy (-0.1%).

The **industrial new orders index** increased in March by strong 5.2% m-o-m, after rising by 1.9% in February.

2. Private consumption

Private consumption was flat (q-o-q) in 09Q4, after the decline in 09Q3. The relative resilience of private

consumption can be largely explained by strong government measures, the relatively muted decline in employment, sticky wages and sizeable disinflation.

The **consumer confidence indicator**, which is not subject to the NACE rev.2 changeover, declined markedly among euro-area consumers (by 3 points). The sharpest drops were reported in Southern Europe. Consumers were worried about the general economic outlook, although their assessment of the labour market continued to improve.

The volume of **retail trade** fell by 1.2% m-o-m in April, after a 0.5% rise in March. On an annual comparison, retail sales were down by 1.5%, substantive drop from a 1.3% growth in March. The **retail confidence** indicator declined in May and offset a rise recorded in April.

3. Investment

Gross fixed capital formation continued to contract, by 1.3%, in 09Q4 (q-o-q). Investment has been a main source of weakness during this recession, with the contraction mostly due to non-construction investment. On an annual basis, investment was still down by a remarkable 8.8% in 09Q4.

Firms reported a continuing increase in their **capacity utilisation**, which now stands at 75.5% in 10Q2 (after 71% in 09Q4 and 72.3% in 10Q1). The increase was particularly strong in Germany, up from 73.9% to 79.8% respectively.

4. Labour market

In April, the **unemployment** rate rose to 10.1%, from 10% in March. It's the highest rate since May 1998. Unemployment rates in the euro-area Member States stood between 4.1% in the Netherlands and 4.9% in Austria, on the lower end, and 19.7% in Spain, followed by 14.1% in Slovakia, on the upper end.

The number of **persons employed** decreased by 0.2% (q-o-q) in 09Q4. Although still falling, this reveals a slight improvement compared to the 0.5% decrease in 09Q2 and 09Q3. On an annual basis, employment growth was also negative (-2.0%) in 09Q4; up from -2.2% in 09Q3. Over 2009 as a whole, employment decreased by 1.8% (about 2.7 mil. persons), after a positive 0.9% growth in 2008.

While managers' **employment expectations** in manufacturing as well as consumers' assessment of the labour market situation still improved, the expectations fell slightly among managers in services sector.

According to the quarterly manufacturing survey, the level of **labour shortages** increased in second quarter

of 2010, but remains still at low levels; with 1.8% of firms reporting that unfilled job openings were constraining production, up from 0.9% in 10Q1 and about a similar level as a year ago.

5. International transactions

In May, the assessment of **export order books** improved further (by +2 points), while the current level (-30) is still well below the long-term average (-20). In March, the seasonally-adjusted **euro-area trade** with the rest of the world showed a surplus for the 12th month in a row, although this time with 0.6 bn. euro it was very close to a balanced level. In 09Q4, **exports of goods and services** increased by 1.9% (q-o-q) in volume terms while **imports** rose by 1.3%; reflecting buoyant global demand and weak domestic spending.

In March 2010, the euro-area **current account** recorded a surplus of 1.7 bn. euro. This reflected surpluses in goods and services, which were partly counterbalanced by deficits in current transfers and in income. The **financial account**, combined direct and portfolio investment, recorded net outflows of 38 bn. euro (non-seasonally adjusted).

6. Prices

According to the flash estimate, annual **inflation** in May is expected to be 1.6%, up from 1.4% in April. Developments in the euro-area inflation in April were a result of two offsetting forces: the upward movement of energy and food inflation and the easing of **core inflation** (down from 0.9% in March to 0.7% in April).

Oil prices have rebounded during 2009 after declining sharply in 08H2. In May, the volatility of the oil price development was very high, with prices ranging between 69 USD/bl. and 88.5 USD/bl., pointing to high uncertainty in the markets. On 2 June, the price of Brent crude oil was 73 USD per barrel.

Euro-area **industrial producer prices** rose by 0.9% (m-o-m) in April, after rising by 0.6% in March. On a yearly basis, industrial producer prices rose strongly by 2.8% in April.

7. Monetary and financial indicators

Interbank money market conditions continued to tighten slightly in the recent weeks. In the euro area, the 3-month Euribor increased to 0.70% (2 June), while the 3-month Libor rate in the US increased more notably to 0.54%, while they were 0.66% and 0.25% respectively late February. Some banks still struggle to raise money in the light of their exposure to the debt issued by Greece and other countries.

Moreover, spreads between 3-months euro and dollar Libor on the one hand and "risk-free" overnight index swap rates widened over the last few weeks, suggesting persisting tensions in the money market.

Bond markets (10-year benchmark government yields) were experienced substantial tensions in the recent weeks. Benchmark sovereign bond yields accelerated their decline in May. At the end of the month, the euro-area 10-year government bond yield stood at 2.58%, the lowest ever observed (3.18% mid-April). On 2 June, the 10-year yield closed at 2.66%. The US 10-year Treasury rate was at 3.35% (3.85% mid-April). In May, the sovereign bond markets continued to be influenced by the situation in Greece, but, among others, also by announcements of new consolidation measures, debt auctions in several Member States as well reactions on positive/negative stock markets' evolution.

The annual rate of growth of **M3** in April continued to decline at -0.1%, the same as in March. **Loan growth to the private sector** turned positive, although it grew by a mere 0.1%, nevertheless up from -0.2% contraction in March. The divergence in developments of loans to non-financial corporations and households is increasing. While **lending to non-financial corporations** continued to decline at a rapid pace (-2.6%), down from -2.4% in March, growth of **loans to households** continued to increase to 2.5% in April (up from 2.1% in March).

After appreciating for most of 2009, the **euro** weakened since the turn of the year. In recent weeks, concerns about public finances have put the exchange rate under pressure, pushing it to a 4-year low against the USD in late May (1.21 USD/EUR). Against the JPY, the euro traded at 109.3 JPY last week, the lowest level since end-2001. Since then, the euro slightly recuperated some of its strength.

The **stock market indices** kept a positive momentum until mid-April this year, mainly on the back of encouraging macroeconomic data and positive earnings. More recently, in May, global market indices suffered high losses with Europe continuing to underperform US and Asian indicators. The Eurostoxx Index has fallen about 10% in May compared to April, while Dow Jones lost some 6% and Nikkei about 9%.

KEY INDICATORS FOR THE EURO AREA

Euro-area	Indicators as from 2009 refer to Belgium (BE), Germany (DE), Ireland (IE), Greece (GR), Spain (ES), France (FR), Italy (IT), Cyprus (CY), Luxembourg (LU), Malta (MT), the Netherlands (NL), Austria (AT), Portugal (PT), Slovenia (SI), Slovakia (SK), Finland (FI).	
Indicator	Note	Source
1. Output		
Economic Sentiment Indicator	The economic sentiment indicator is the weighted average (of the industrial confidence indicator (40%), the services confidence indicator (30%), the consumer confidence indicator (20%), the construction confidence indicator (5%) and the retail trade confidence indicator (5%)). Data are seasonally adjusted.	DG ECFIN
Industrial confidence indicator	The industrial confidence indicator is the arithmetic average of the balances (%) referring to the questions on production expectations, order books and stocks (the latter with inverted sign) from the survey of manufacturing industry. The long-term average refers to the period as from publishing of the indicator up to now. Data are seasonally adjusted.	DG ECFIN
Services confidence indicator	The services confidence indicator is the arithmetic average of the balances (%) referring to the questions on business situation and recent and expected evolution of demand from the survey of services. The long-term average refers to the period as from publishing of the indicator up to now. Data are seasonally adjusted.	DG ECFIN
Industrial production	Monthly Production Index (2005=100), NACE Rev.2 B-C-D, Total industry (excluding construction). Mom % ch. and qoq% ch. are seasonally adjusted, yoy% ch. are working-day adjusted.	Eurostat
Gross domestic product	Gross domestic product at constant market prices (chain-linked volumes, reference year 2000), EUR. Data are seasonally and working-day adjusted.	Eurostat
Labour productivity	Labour productivity defined as the difference between GDP growth and employment growth.	Eurostat
GDP divergence	Standard deviation of GDP growth of the following countries: BE, DE, ES, FR, IT, CY, LU, NL, AT, PT, SI, FI.	Eurostat
2. Private consumption		
Consumer confidence indicator	The consumer confidence indicator is the arithmetic average of the balances (%) referring to the questions on the financial situation of households, general economic situation, unemployment expectations (with inverted sign) and savings; all over next 12 months. The long-term average refers to the period as from publishing of the indicator up to now. Data are seasonally adjusted.	DG ECFIN
Retail confidence indicator	The retail confidence indicator is the arithmetic average of the balances (%) referring to the questions on the present and the future business situation and the volume of stocks (with inverted sign). The long-term average refers to the period from publishing of the indicator up to now. Data are seasonally adjusted.	DG ECFIN
Private consumption	Household & NPISH final consumption expenditure at constant market prices (chain-linked volumes, reference year 2000), EUR. Data are seasonally and working-day adjusted.	Eurostat
Retail sales	Retail trade (NACE Rev.2 G47) excluding motor vehicles, motorcycles; Deflated turnover, mom % ch. and qoq% ch. are seasonally adjusted, yoy% ch. are working-day adjusted.	Eurostat
3. Investment		
Capacity utilization	In percent of full capacity in the manufacturing sector. Data are seasonally adjusted (collected in January, April, July and October).	DG ECFIN
Production expectations	Production expectations in manufacturing sector. Data are seasonally adjusted.	DG ECFIN
Gross fixed capital formation	Gross fixed capital formation at constant market prices (chain-linked volumes, reference year 2000), EUR. Data are seasonally and working-day adjusted.	Eurostat
Equipment investment	Gross fixed capital formation at constant market prices (chain-linked volumes, reference year 2000), EUR, metal products, machinery and transport equipment. Data are seasonally and working-day adjusted.	Eurostat
Construction investment	Gross fixed capital formation at constant market prices (chain-linked volumes, reference year 2000), EUR, construction work and housing. Data are seasonally and working-day adjusted.	Eurostat
Change in stocks	Changes in inventories and acquisitions less disposals of valuables (at prices of previous year).	Eurostat
Profit share	Ratio of nominal gross operating surplus and gross mixed income to nominal GDP	Eurostat

KEY INDICATORS FOR THE EURO AREA

4. Labour market		
Employment expectations (manufacturing)	Managers' employment expectations over the next three months in the manufacturing sector. Data are seasonally adjusted.	DG ECFIN
Employment expectations (services)	Managers' employment expectations over the next three months in the services sector. Data are seasonally adjusted.	DG ECFIN
Employment expectations (whole economy)	Weighted average of managers' employment expectations over the next three months in the manufacturing (19%), services (65%), construction (6%) and retail sectors (10%). Weights in brackets according to value-added share on GDP of the respective sector. Data are seasonally adjusted.	DG ECFIN
Employment	Total domestic employment (number of persons). Data are seasonally and working-day adjusted.	Eurostat
Compensation of employees per head	Nominal compensation of employees divided by the number of employees. Data are seasonally and working-day adjusted.	DG ECFIN
Unemployment expectations	Consumers' unemployment expectations over the next twelve months. Data are seasonally adjusted.	DG ECFIN
Unemployment rate	Harmonized unemployment rate (in percent of labour force), ILO definition. Data are seasonally adjusted.	Eurostat
Structural unemployment rate	Non-accelerating inflation rate of unemployment. Data are seasonally adjusted.	OECD
