**EMBARGO 12h00 CET**

GRAPH 1: **Economic sentiment indicator (s.a.)**

(\*) Provisional data

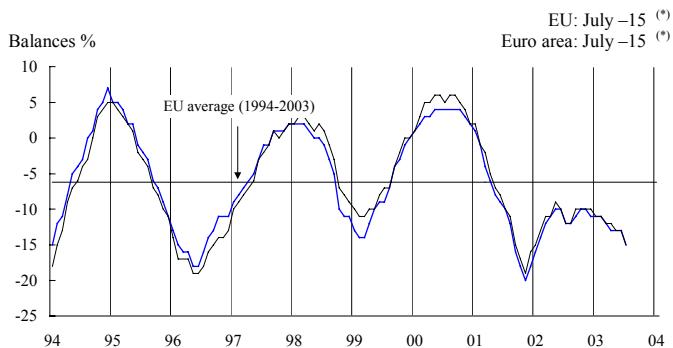

### Economic sentiment remained fairly stable in July

The **economic sentiment indicator (ESI)** for the EU did not show any change in July 2003, remaining at 98.3 for the third consecutive month. For the euro area, the ESI declined marginally to 98.0, after having stayed at 98.1 for three months. Overall, these developments show that, while there are no signs of a worsening economic climate in the EU, a sustained upturn in economic sentiment is still on hold. Nevertheless, improvements in economic sentiment were recorded in *Finland* (0.6 percentage points), *Greece*, *Ireland* (0.3), *Luxembourg* (0.2), *Spain* and the *Netherlands* (0.1). This was offset by a deterioration in *Italy* (0.5), *Sweden* (0.4), *Germany* (0.2), *Denmark* and *Portugal* (0.1). Economic sentiment remained unchanged in *Belgium*, *France*, *Austria* and the *UK*.

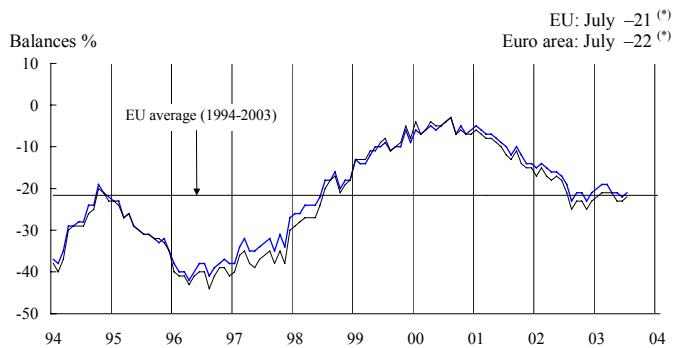

GRAPHS 2-5: Economic sentiment indicator components (s.a.)

— EU — Euro area

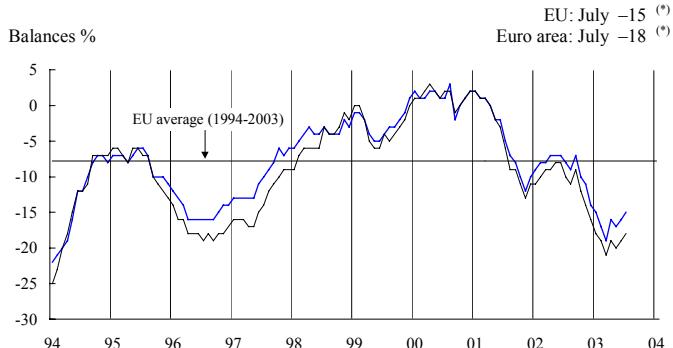

GRAPH 2: Industrial confidence indicator

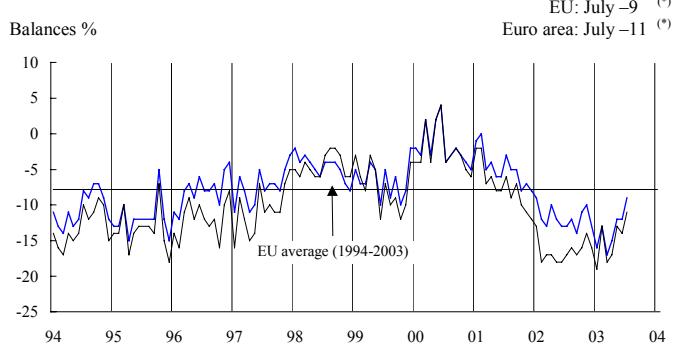

GRAPH 4: Construction confidence indicator

GRAPH 3: Consumer confidence indicator

GRAPH 5: Retail trade confidence indicator

(\*) Provisional data

The stability of the ESI is the resultant of improvements in the *consumer, construction and retail trade confidence indicators* offset by a decrease in the *industrial confidence indicator*.

The **industrial confidence indicator** decreased by 2 points in both the euro area and the EU. The overall decline was driven by decreases in *Italy* (6 points), *Sweden*, the *UK* (4), *Germany* (2), *France* and *Austria* (1). These decreases were partly offset by increases in *Finland* (8), *Ireland* (4), the *Netherlands* (3), *Spain* (2), *Greece* and *Luxembourg* (1). Industrial confidence remained unchanged in *Belgium*, *Denmark* and *Portugal*.

All underlying components contributed to the deterioration of the industrial confidence indicator in the EU and the euro area.

In particular, *production expectations* decreased by 1 point in both the EU and the euro area. However, developments were highly divergent across Member States. Production expectations decreased strongly in *Italy* (13 points) and *Sweden* (9) and, to a lesser extent, in *Austria* (3), *Germany*, *Greece* (2) and the *UK* (1). By contrast, they increased very strongly in *Finland* (20) and *Ireland* (12), and a

more moderate increase was observed in *Spain*, the *Netherlands* (5), *Denmark*, *Luxembourg* (4), *Belgium* (3), *Portugal* (2) and *France* (1).

*Order books* also worsened in both the EU and the euro area. Again, developments were uneven across Member States. A significant deterioration was recorded in *Sweden* (13 points); more moderate declines were seen in the *UK* (6), *Denmark*, *Spain*, *Portugal* (4), *Germany* (3), *Italy* (2) and *Belgium* (1). Order books improved in *France* (6), *Greece* (5), *Luxembourg* (4) *Ireland*, the *Netherlands* (3), *Austria* and *Finland* (2).

*Stocks of finished products* increased by 3 points in both the EU and the euro area. Companies saw their stocks increase, in particular, in *France* (11 points), the *UK* (5), *Luxembourg* (4), *Ireland* (3), *Belgium*, *Germany*, *Italy*, *Austria* (2) and the *Netherlands* (1). On the other hand, stocks decreased in *Sweden* (10), *Spain* (3), *Portugal*, *Finland* (2) and *Greece* (1). There was no change in *Denmark*.

*Production trends observed in recent months* decreased slightly in the EU and the euro area. *Employment expectations* and *selling price*

*expectations* both showed a small increase in the two aggregates. *Export order books* remained stable for the EU but increased marginally in the euro area.

The results of the *quarterly survey in the manufacturing sector*, which was also carried out in July, are by and large consistent with the results of the monthly survey. *First*, actual capacity utilisation remained broadly stable at around 80% between April and July. *Second*, in accordance with the existence of such an excess capacity, and coupled with the moderate decrease in production expectations, the assessment of production capacity has changed upwards. *Third*, on average, managers consider that production is assured for slightly more than 3 months, and this assessment has hardly changed in the last two years. *Fourth*, new orders in manufacturing have not shown any significant change during the second quarter of 2003, even though order books showed a small decrease. *Finally*, export volume expectations remained fairly stable, in line with the developments of the export order books.

Looking at different industrial branches a small deterioration in the *capacity utilisation* can be observed for almost all branches. *Export volume expectations*, which remained stable for the industrial sector as a whole, showed a mixed picture across branches. While for *non-metallic mineral products* the expectation improved sharply, it deteriorated strongly in the *medical and optical instruments industry*.

The ***consumer confidence indicator*** increased in both the EU and the euro area by 1 point. However, this conceals large differences across Member States. While consumer confidence improved in *Luxembourg, Sweden* (3 points), *Germany, Finland* (2), *France, Austria* and *Portugal* (1), it remained unchanged in *Greece, Ireland* and the *UK*. Confidence decreased in the *Netherlands* (5), *Denmark* (4), *Spain* (3), and to a lesser extent in *Belgium* and *Italy* (1).

An improvement in the expected developments of the *general economic situation* coupled with an anticipated decline in *unemployment* is behind the improvement in the overall consumer confidence. However, *households' expectations about their financial situation over the next 12 months* remained unchanged and their *savings expectations* deteriorated.

Consumers' expectations concerning the *general economic situation over the next 12 months*

improved in a majority of the Member States. They improved significantly in *Finland, Luxembourg, Germany* and *Sweden* and, to a lesser extent, in the *UK, Austria, Portugal* and *France*. They worsened markedly in *Denmark* and the *Netherlands* and, to a lesser extent, in *Belgium, Ireland, Italy, Greece* and *Spain*.

The most notable change in consumers' expectations about their *financial situation* concerned *Denmark*, where a substantial deterioration occurred. Positive developments were observed in *Ireland, Luxembourg, Germany, Greece* and *Austria*, while expectations remained unchanged in *France, Italy, Finland, Sweden* and the *UK*.

*Unemployment expectations* of consumers developed unevenly across Member States. While a substantial decrease occurred in *Austria, France, Luxembourg* and *Sweden*, *unemployment expectations* increased significantly in *Belgium, Denmark* and *Ireland*. Balances for *price trends over the next 12 months* increased moderately, implying an increase in inflationary expectations.

The ***construction confidence indicator*** showed a small increase of 1 point in both the EU and the euro area. The indicator improved strongly in *Finland* (18 points) and *Ireland* (14) and, although much less markedly, in *Spain* (8), *Greece*, the *UK* (6), *Austria* (5), *Denmark*, the *Netherlands* (3) and *Luxembourg* (2). *Sweden* (15) and *Portugal* (10) saw a substantial deterioration, while the decrease was less pronounced *Germany* (3), *Belgium* and *France* (1). In *Italy* the indicator remained unchanged.

The small increase of the confidence indicator was the resultant of an improvement of the *employment expectations* and an unchanged *assessment of the order book situation*. The assessment of the *current activity compared with preceding months* worsened slightly in both the EU and the euro area. At national level no large changes were observed with the exception of *Luxembourg* (+15), *Finland* (-13) and *Sweden* (-16). With regards to *price expectations* the overall picture suggests a small decrease in *inflationary tensions* in the future. Especially in *Sweden* and *Ireland*, the decrease in *inflationary expectations* is considerable (-14 points).

The ***retail trade confidence indicator*** increased by 3 points in both the EU and the euro area. The positive perception in the *expected business situation* as well as the decrease in the *volume of stocks* are the driving forces behind the

improvement of retailers' confidence in both aggregates. Across the Member States there was generally speaking a positive development in the indicator. Only *Ireland*, *Austria*, the *Netherlands* and *Sweden* registered a small decrease. Considerable increases were observed in *Belgium*, *France*, *Italy* and the *UK*.

Managers in the retail sector also reported an increase in their *intentions to place orders* and were more positive about the *employment expectations*.

The ***services confidence indicator*** remained on the upward trend observed during the last four months. It increased by 5 and 4 points in the EU and the euro area, respectively, showing, for the first time since September 2002, a positive value. All three underlying components of the confidence indicator showed a positive development of which the *assessment of the business climate* was the most pronounced. This positive tendency was observed in most Member States. On the employment front, on the other hand, the service sector shows a less positive picture; the assessment of both the *recent* as well as the *expected evolution of employment* decreased slightly after the positive development in June.

In the ***future Member States*** the *industrial confidence indicator* improved slightly due to a small decrease in *stocks*. By contrast, the *consumer confidence indicator* showed a small decrease, reflected also in its underlying components. The

same can be said about the *construction confidence indicator*, i.e. a small decrease of the indicator and its underlying components. The *retail trade confidence* remained unchanged, with a more positive assessment of the *present business situation* offset by a more negative assessment of the *expected business situation*. The *service confidence indicator* showed a more pronounced decrease, which is reflected also by its underlying components.

The confidence indicator in the industrial sector decreased significantly in *Cyprus*, *Slovakia* and the *Czech Republic*, while it improved substantially in *Hungary*, *Estonia* and to a lesser extent in the *Latvia*, *Lithuania* and *Slovenia*. Consumer confidence improved slightly in *Romania*, and *Latvia*. It remained unchanged in *Poland* and *Slovakia*, while it deteriorated in the rest of the countries. The retail trade confidence indicator remained fairly stable in most countries, with the exception of *Cyprus* and *Romania* (showing a significant decrease) and the *Czech Republic*, where a considerable improvement was observed. The construction confidence indicator showed a strong deterioration for *Cyprus*, while *Bulgaria* and *Estonia* registered a significant improvement. Finally, with the exception of *Bulgaria* and *Cyprus*, all countries showed a decrease of the service confidence indicator to a lesser (*Poland*) or greater (*Romania*) degree.

Brussels, 31 July 2003.

\* In the tables: (s.a.) = seasonally adjusted, (n) = not seasonally adjusted, : = not available.

The economic sentiment indicator (1995 = 100) is composed of the industrial confidence indicator (40%), the consumer confidence indicator (20%), the construction confidence indicator (20%), and the retail trade confidence indicator (20%); except for Luxembourg for which it is composed of the industrial (50%), the consumer (25%) and the construction confidence indicator (25%). All confidence indicators are balances.

Source: unless stated otherwise: European Commission business and consumer surveys.

TABLE 2a:		Monthly survey of manufacturing industry — Monthly questions and the composite industrial confidence indicator <sup>(a)</sup> Balances: i.e.differences between the percentages of respondents giving positive and negative replies (s.a.)

(a) The indicator is the arithmetic average of the balances (%) of the questions on production expectations, order-books and stocks (the last with inverted sign).

(b) Highest figure is considered as minimum, lowest figure is considered as maximum.

(a) Data collected in January, April, July and October each year.

(b) Answers to the questions whether, taking into account the level of order-books or production, capacity is more than sufficient (+), sufficient (=) or less than sufficient (-). Thus, negative balances (capacity less than sufficient) indicate high levels of capacity utilisation, whereas positive balances (capacity more than sufficient) are associated with low levels of capacity utilisation.

(c) Balances: i.e., differences between the percentages of respondents giving positive and negative replies.

TABLE 2c: Capacity utilisation by industrial branch <sup>(a)</sup> (s.a.)  
Degree of capacity utilisation in %

(a) The sum of the replies for each Member State are weighted in the Community total with the value of consumers' expenditure.

(b) The indicator is the arithmetic average of the balances (%) of four questions: the financial situation of households, the general economic situation, unemployment expectations (with inverted sign) and savings, all over the next 12 months.

(c) This question was modified in the Belgian consumer survey in May 2003, in order to bring it into line with the EU harmonised programme. The series prior to and after this date cannot therefore be compared.

(n) Not seasonally adjusted.

(a) United Kingdom: refers to the volume of sales for the time of the year.

(b) The indicator is the arithmetic average of the balances (%) for the present and the future business situation, and for stocks – with inverted sign.

(c) Quarterly data, seasonally adjusted monthly.

TABLE 6: Monthly survey of services — Monthly questions <sup>(a)</sup>

Balances: i.e. differences between the percentages of respondents giving positive and negative replies (s.a.)

(a) The indicator is the arithmetic average of the balances (%) of the questions on production expectations, order-books and stocks (the last with inverted sign).

(b) Highest figure is considered as minimum, lowest figure is considered as maximum.

(n) Not seasonally adjusted.
