

BUSINESS AND CONSUMER SURVEY RESULTS

April 2005

Next publication of Business and Consumer Survey Results scheduled for 28 May 2005
http://europa.eu.int/comm/economy_finance/indicators/businessandconsumersurveys_en.htm

GRAPH 1: Economic sentiment indicator (s.a.)

Economic sentiment continues to decline in both the EU and the euro area

The *economic sentiment indicator (ESI)* for the *EU* weakened by 1.7 points in April, following its decline by 2.4 points in March. In the *euro area*, the indicator eased by 1 point in April, after a decrease of 1.3 points in March. Since peaking in October 2004 the indicator has fallen by 6.6 points in the EU and by 5 points in the euro area, indicating a considerable slowing of output growth in the first half of 2005.

In both areas, the decline in the economic sentiment indicator was due mainly to a worsening of confidence in the industry and the services sector. Consumer confidence was holding up, though, and retail and construction confidence developed sideward.

Among the large Member States, strong decreases were registered in the *UK*, followed by *France*. The deterioration was more limited in *Germany* and *Italy*. In *Spain*, economic confidence remained almost unchanged while *Poland* saw a significant recovery after the strong fall in the previous month.

Industrial confidence declines in both the EU and the euro area

Industrial confidence declined by 2 points in the EU and by 1 point in the euro area. For the first time since the end of 2003 the indicator is now below its long-term average in both areas.

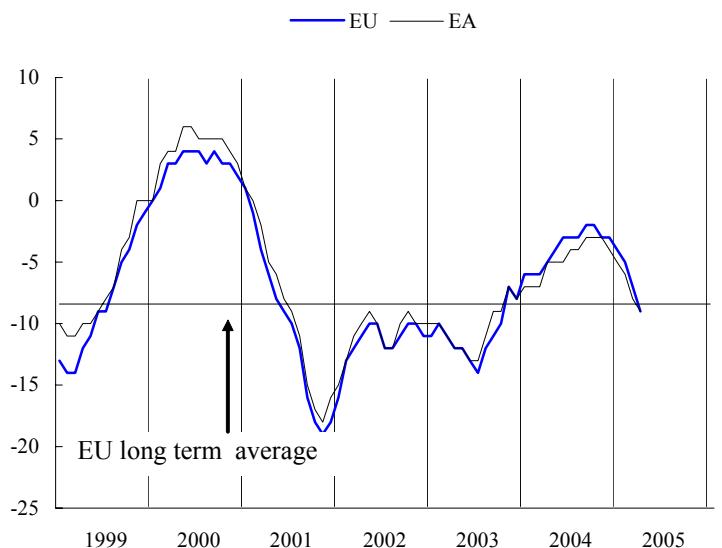

The decline of the indicator in the EU was reflected in all indicator components. The assessment of *order books* worsened by 3 points, *production expectations* declined by 2 points and the opinions on the *stocks of finished products* deteriorated by 1 point. Developments in the euro area were similar, although less pronounced.

Industrial confidence fell in all large Member States with the exception of *Italy*, where the indicator remained steady. The strongest decline among the large Member States was observed in the *UK* where the indicator dropped by 5 points, following an equivalent decrease in the month before.

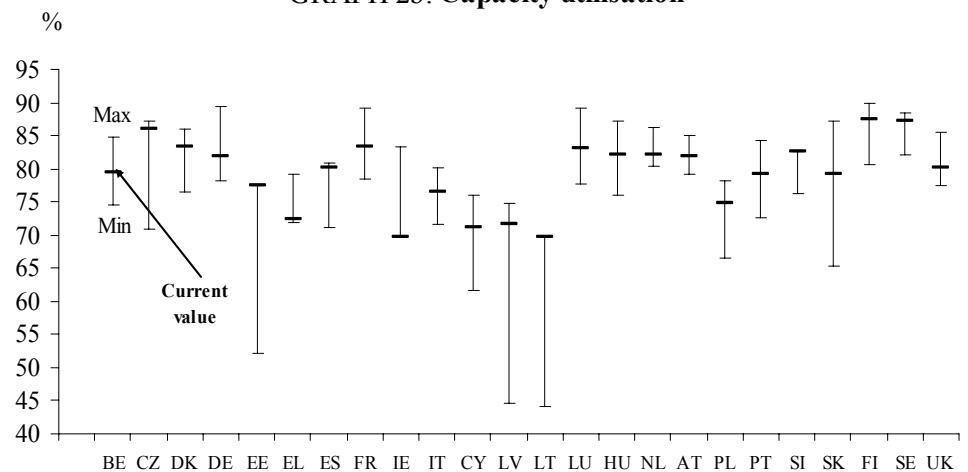

The results of the *quarterly survey in the manufacturing sector* for April 2005 are by and large consistent with the results of the monthly survey. Industrial managers reported a deterioration in their assessment of *new orders* and the *expected export volume*. The *estimated number of months' production assured by orders in hand* also decreased slightly.

Capacity utilisation fell by nearly 1 percentage point compared with the results of January. Among the large Member States, *Germany*, *France*, *Poland* and the *UK* registered a fall in capacity utilisation, while it remained unchanged in *Spain* and *Italy*. Comparing the April value with the historical minima and maxima it can be seen that about one half of the Member States fall in the upper half of the interval, with a few countries, mostly from the group of the recently acceded countries, approaching or reaching the historical maximum.

GRAPH 2a: Industrial confidence indicator

GRAPH 2b: Capacity utilisation

At the level of branches, only the *consumer goods* sector could escape the general trend of a decreasing capacity utilisation. While the decline in the *investment goods* sector remained limited, the *intermediate goods* sector registered a considerable drop in capacity utilisation in comparison to January.

Services confidence also falls in both areas

Confidence in the services sector decreased by 2 points in the EU and by 1 point in the euro area. After a strong recovery during 2003 and a more or less stable evolution in 2004, confidence in the services sector has entered on a downward path since the beginning of 2005.

The fall of the services confidence indicator in the EU was due to a more negative assessment of the *evolution of demand*, both over the *most recent months* and the *coming months*. The assessment of the *current business situation* remained unchanged. Developments in the euro area were similar.

At country level, a mixed picture prevails. Among the large Member States, a decline in confidence was registered in *France*, *Italy*, the *UK* and, to a smaller degree, in *Germany*. *Spain* and *Poland*, on the other hand, recorded a fairly strong increase in confidence.

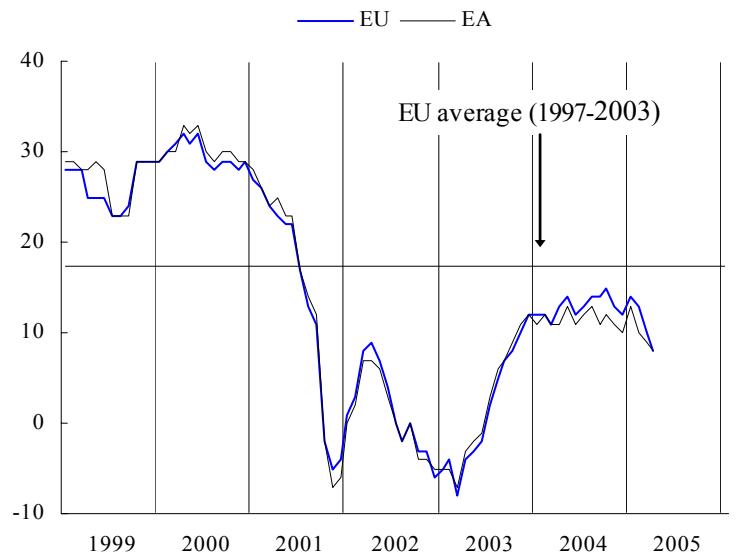

Consumer confidence remains fairly stable

Consumer confidence continued its broadly stable evolution observed over the last months. Having remained unchanged at a level of -10 for the period November 2004 - March 2005, the indicator for the EU declined moderately to a level of -11 in April. In the euro area, the indicator edged up by 1 point to -13, a level at which it had been standing in the 6 months prior to March, when it fell to -14.

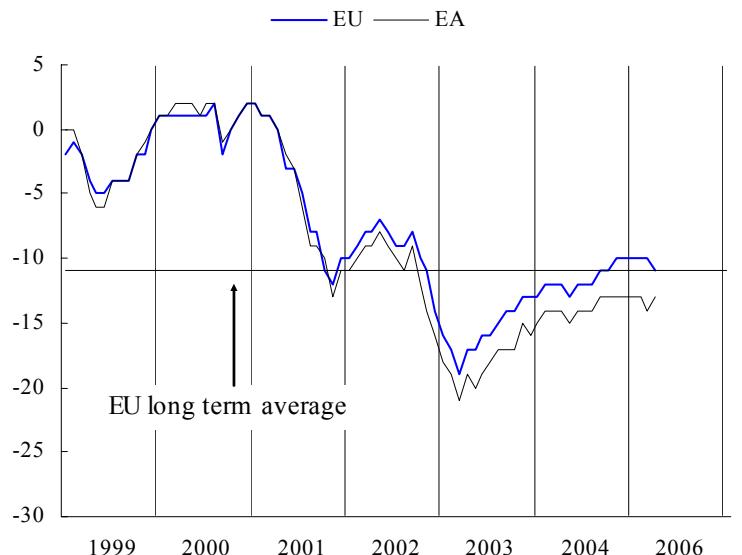

The relative stability of the confidence indicator in the EU is also reflected in the underlying components. Consumers' expectations with regard to their own *financial situation* and their *savings* remained unchanged. Their expectations about the *general economic situation* worsened slightly compared to the March figure. On the other hand, consumers held more optimistic views concerning the *future unemployment* situation.

The results at the country level are slightly more volatile. In *France* and the *UK* confidence fell by 3 points, while *German* consumer sentiment regained 3 points, offsetting an equivalent loss in the month before.

GRAPH 3: Services confidence indicator

GRAPH 4: Consumer confidence indicator

Confidence in retail trade unchanged in the EU, increase in the euro area

The *retail trade confidence indicator* remained unchanged in the EU and increased by 2 points in the euro area. In the light of the erratic behaviour of the indicator over the last 18 months it is not easy to recognise a clear trend in the euro area developments. In the EU, however, the mild downward trend, which started at the end of 2003, seems to have become more accentuated in recent months.

As to the underlying indicator components, a more positive view on the *present business situation* was compensated by a negative assessment of the *volume of stocks*. Regarding the *expected business situation* the views of retailers did not change in the EU in comparison to the previous month, while they improved in the euro area.

At the country level, developments were quite diverse. Among the large Member States, *Spain*, *Italy* and *the UK* saw a large fall in confidence, while *Germany* registered a strong improvement of retailers' confidence.

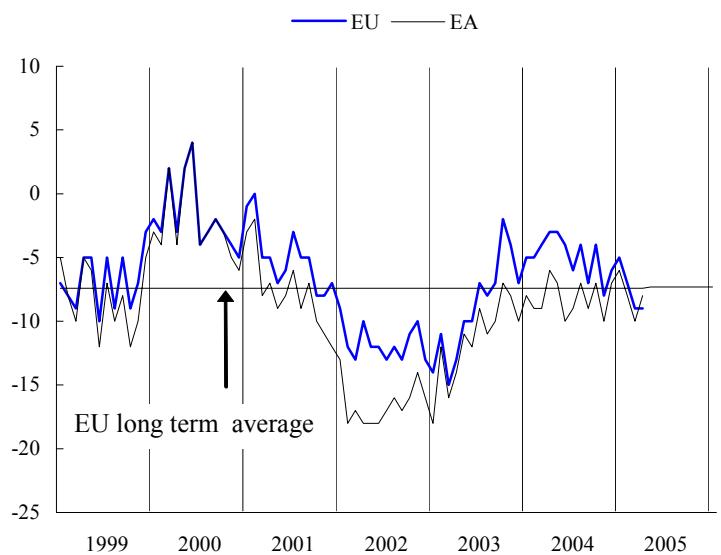

Construction confidence stable in the EU but slightly down in the euro area

The *construction confidence indicator* remained unchanged in the EU and fell by 1 point in the euro area. After a period of slow, but sustained growth between September 2003 and November 2004, confidence in the construction sector has remained fairly stable over the last few months.

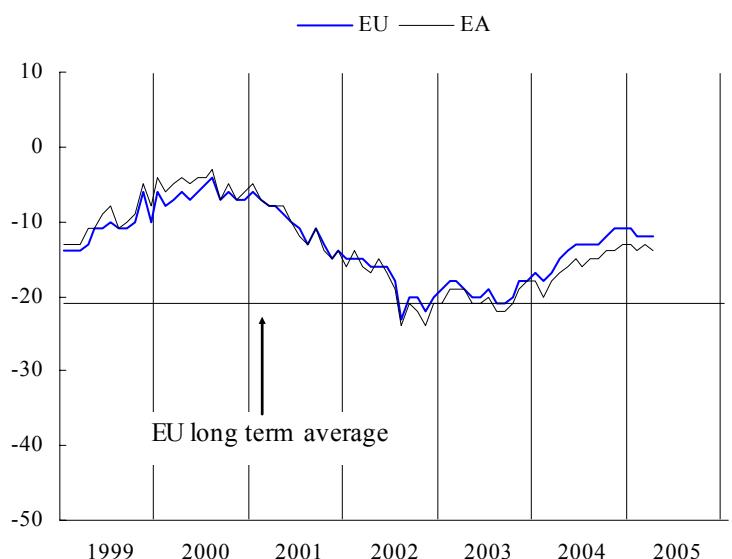

The stability in the development of the overall indicator masks fairly strong movements at the level of the components. In particular, while the assessment of *order books* deteriorated strongly in the EU, there was at the same time more optimism with regard to the *employment expectations*.

At the country level, a strong fall in construction confidence was recorded in *Spain* and *the UK*. *France* also registered a small fall of confidence. The other large Member States saw confidence in the construction sector improve.

GRAPH 5: Retail confidence indicator

GRAPH 6: Construction confidence indicator

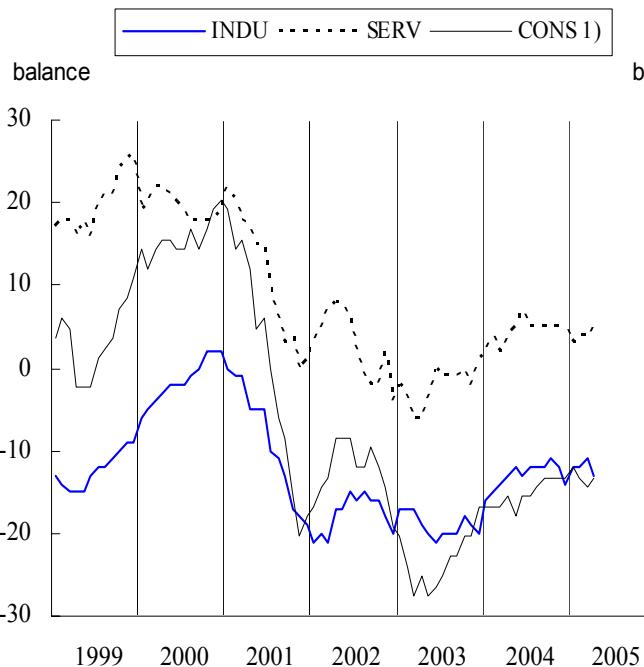

Employment, unemployment and price expectations in the EU

Overall, *employment expectations* in the EU developed in a mixed way. Managers in the industry had a slightly less optimistic view of employment developments compared with one month ago. Managers in the service sector as well as consumers on the other hand were more optimistic with regard to future (un)employment.

Regarding *price expectations*, the picture is ambiguous. Managers in the industry foresee strong downward pressure on prices, while consumers and construction managers expect more upward pressure.

(a) The indicator is the arithmetic average of the balances (%) of the questions on production expectations, order-books and stocks (the last with inverted sign).

(b) Highest figure is considered as minimum, lowest figure is considered as maximum.

(a) Data collected in January, April, July and October each year.

(b) Answers to the questions whether, taking into account the level of order-books or production, capacity is more than sufficient (+), sufficient (=) or less than sufficient (-). Thus, negative balances (capacity less than sufficient) indicate high levels of capacity utilisation, whereas positive balances (capacity more than sufficient) are associated with low levels of capacity utilisation.

(c) Balances: i.e., differences between the percentages of respondents giving positive and negative replies.

(n) not seasonally adjusted.

(a) United Kingdom: refers to the volume of sales for the time of the year.

(b) The indicator is the arithmetic average of the balances (%) for the present and the future business situation, and for stocks – with inverted sign.

(c) Due to a change in sampling method, the data for the period March 2003 to March 2004 have been revised.

(d) Quarterly data, seasonally adjusted monthly. (n) Not seasonally adjusted

(a) The confidence indicator is the arithmetic average of the three components (the last with inverted sign).

(b) Highest figure is considered as minimum, lowest figure is considered as maximum.
