DIRECTORATE-GENERAL FOR ECONOMIC AND FINANCIAL AFFAIRS

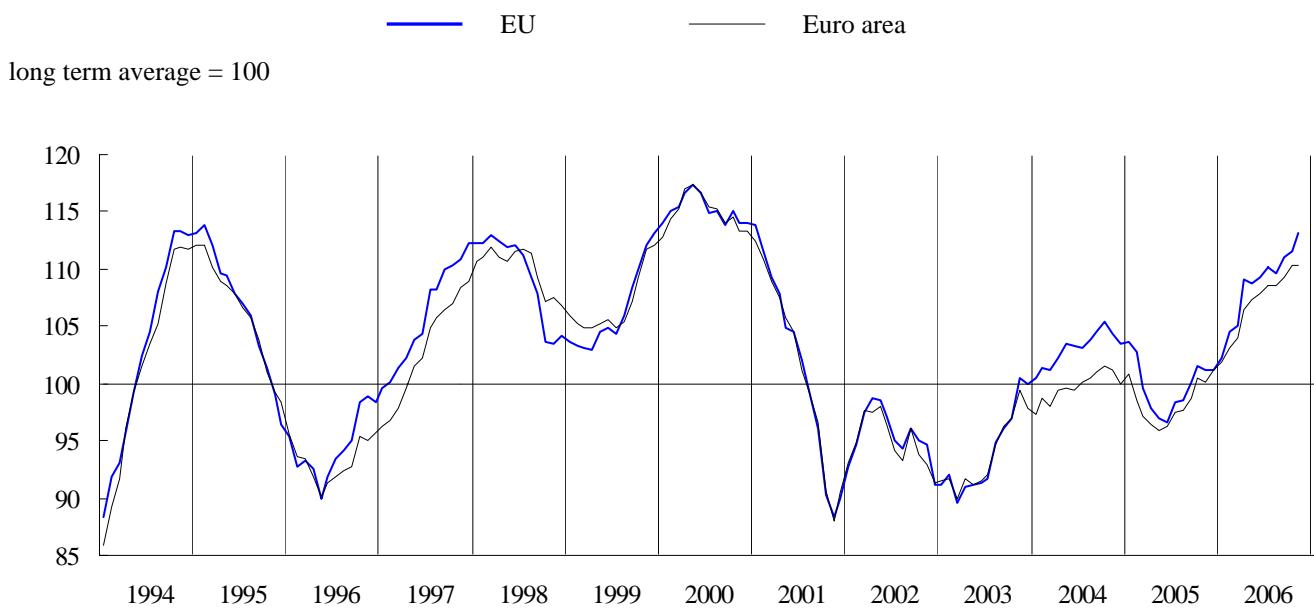

BUSINESS AND CONSUMER SURVEY RESULTS

November 2006

Next publication of Business and Consumer Survey Results scheduled for 5 January 2007
http://ec.europa.eu/comm/economy_finance/indicators/businessandconsumersurveys_en.htm

GRAPH 1: Economic sentiment indicator (s.a.)

Economic sentiment strengthens further in the EU and remains stable in the euro area

The Economic Sentiment Indicator (ESI) in the EU continued to rise in November, reaching its highest level since the beginning of 2001, while it remained broadly stable in the euro area. The indicator rose by 1.6 points in the EU and decreased by 0.1 point in the euro area, to 113.1 and 110.3 respectively. In both areas, sentiment has been on an upward trend since mid-2005.

Economic sentiment was boosted by a rise in confidence across almost all sectors. For the EU in particular, the increase in the sentiment indicator is due to positive developments in the *industry*, *services* and *retail trade* sectors. Sentiment also improved somewhat in the *construction* sector, while remaining broadly stable among *consumers*. The sector developments were slightly different for the euro area, where the indicator for *services* and *retail trade* declined.

At the individual country level, the picture is rather mixed. Among the large Member States, confidence improved in *Germany* (+1.3), *France* (+0.8), *Poland* (+2.7) and in the *UK* (+8.4), while it decreased in *Italy* (-3.1) and *Spain* (-1.0).

Industrial confidence strengthens both in the EU and in the euro area

In November, the *industrial confidence indicator* improved both in the EU and in the euro area. In both areas the indicators increased further above their long-term averages and their local peaks recorded in 2000.

Economic confidence for the EU rose in all three underlying components: *production expectations*, *order books* and *stocks of finished products*. Similar developments were recorded in the euro area, although managers' assessment of *stocks of finished products* remained unchanged.

Most of the EU Member States reported an increase in industrial confidence. Among the large Member States, *Germany* (+2), *Poland* (+2) and the *UK* (+6) recorded an increase in confidence, whereas managers in *Italy* (-1) became slightly more pessimistic. In *France* and *Spain*, industrial confidence remained virtually unchanged.

A sectoral breakdown shows that EU confidence rose in the *investment goods* and *intermediate goods* sectors, while it remained unchanged for *consumer goods*. The rise in confidence was also widespread at the sub-sector level. In particular, confidence in the *food, beverage* and *tobacco* industry sharply increased and reached an all-time high.

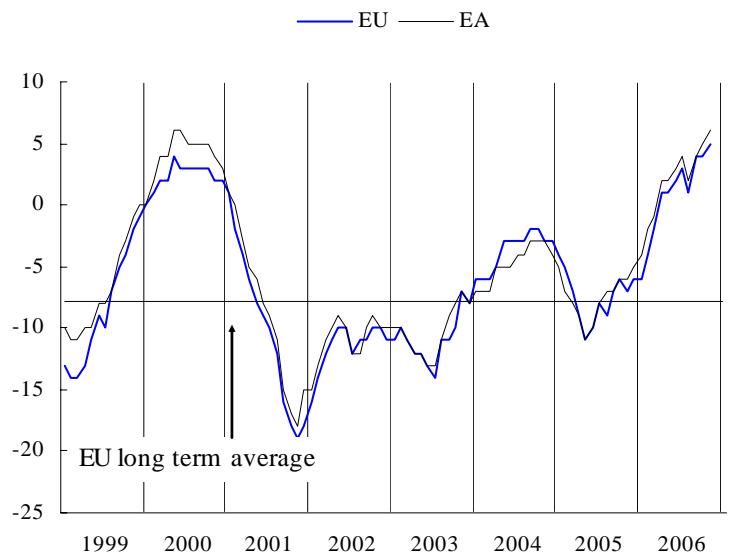

Services confidence improves slightly in the EU while decreasing in the euro area

Since April 2006, the *service confidence indicator* in both the EU and the euro area has been above its long-term average. In November, it increased further in the EU but fell in the euro area.

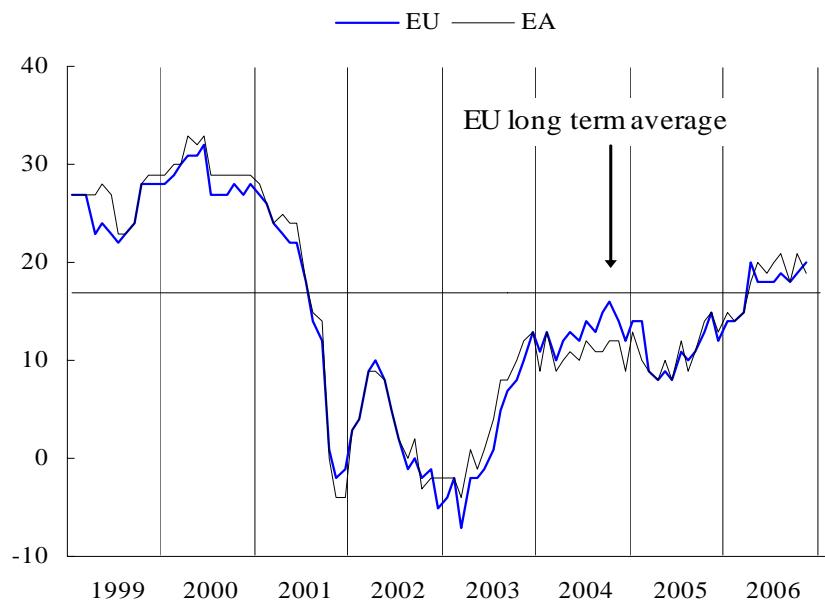

Looking at the components of the confidence indicator, EU managers in the services sector were more optimistic with regard to both the *current business situation* and the *expected evolution of demand*. In contrast, managers in the euro area were less positive regarding these components. Furthermore, the assessment of the *recent evolution of demand* worsened both in the EU and the euro area.

Among the large Member States, the service indicator is well above its long-term average in all countries except *Spain*. In November, the *UK* registered a substantial rise in confidence (+11), while the increase in *France* was modest (+1). The service confidence indicator declined somewhat in *Germany* (-1), *Poland* (-1) and *Spain* (-3) and more markedly in *Italy* (-8).

GRAPH 2: Industrial confidence indicator

GRAPH 3: Services confidence indicator

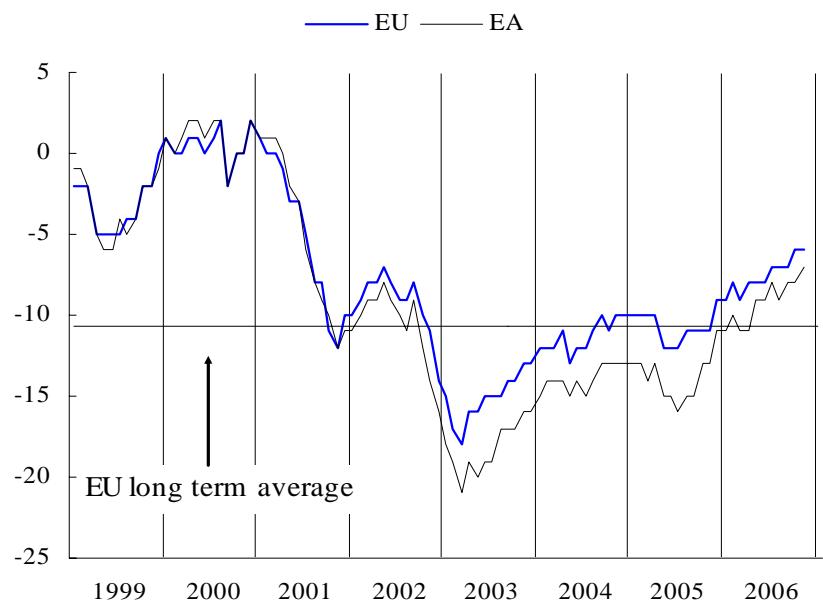

Consumer confidence remains unchanged in the EU while increasing slightly in the euro area

Consumer confidence stayed at the same level in the EU and improved somewhat in the euro area. In both areas, the indicator has been on an upward trend since mid-2005 and although the levels are currently above their long-term averages, they are significantly below the record levels of 2000.

The overall minor change of the indicator in both areas is reflected in broadly stable underlying components. Households' expectations about *the general economic situation* decreased slightly in the EU, while they improved somewhat in the euro area.

At the country level, the results show confident consumers in almost all large countries. The consumer confidence indicator improved in *Germany* (+2), *France* (+1), *Italy* (+1), *Poland* (+4) and *Spain* (+1). According to the indicator, *Polish* consumers were more confident in November than they have ever been. Consumers in *the UK* (-1), on the other hand, became slightly more pessimistic, although the indicator remains above its long-term average.

GRAPH 4: Consumer confidence indicator

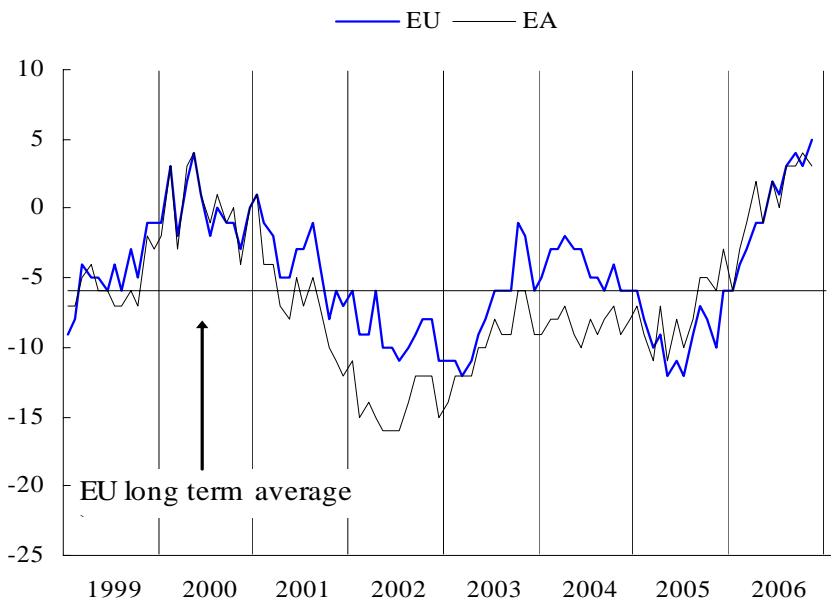

Retail confidence reaches record levels in the EU while declining slightly in the euro area

In the EU, the *retail confidence* indicator reached an all-time high in November. Meanwhile, the indicator declined somewhat in the euro area, although remaining well above its long-term average level.

All components contributed positively to the EU indicator. Retailers' assessments of both the *current* and the *future business situation* became more optimistic and retailers were also more satisfied with the *volume of stocks*. In the euro area, the improved assessment of the *current business situation* was offset by a more pessimistic appraisal of the *future business situation*.

The picture among the Member States is rather mixed. The overall improved confidence in the EU is mainly due to rising indicators in the *UK* (+14), *Italy* (+4), and to a lesser extent in *Poland* (+1). Retailers became less optimistic in *France* (-2) and *Spain* (-4), while confidence remained stable in *Germany*.

GRAPH 5: Retail confidence indicator

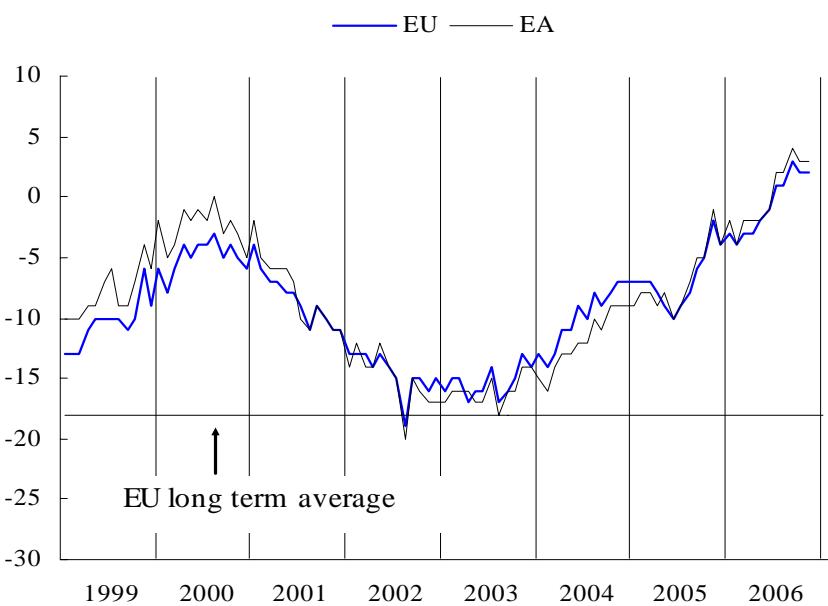

Confidence in the construction sector remains on a high level in both the EU and the euro area

In both the EU and the euro area, the *construction confidence* indicator was unchanged in November. Thus, the indicator remained at a very high level, well above its long-term average.

For both the EU and the euro area, the unchanged indicator in November is the result of diverging movements in the two underlying components. While managers' assessment of *order books* worsened, *employment expectations* improved, reaching a record high level in the EU.

In most countries only small movements were recorded. Among the large countries, construction managers became more optimistic in *Germany* (+1), *Poland* (+3) and *Spain* (+3) while they were less optimistic in the *UK* (-2) and *France* (-1). Construction managers' confidence in *Italy* remained stable.

GRAPH 6: Construction confidence indicator

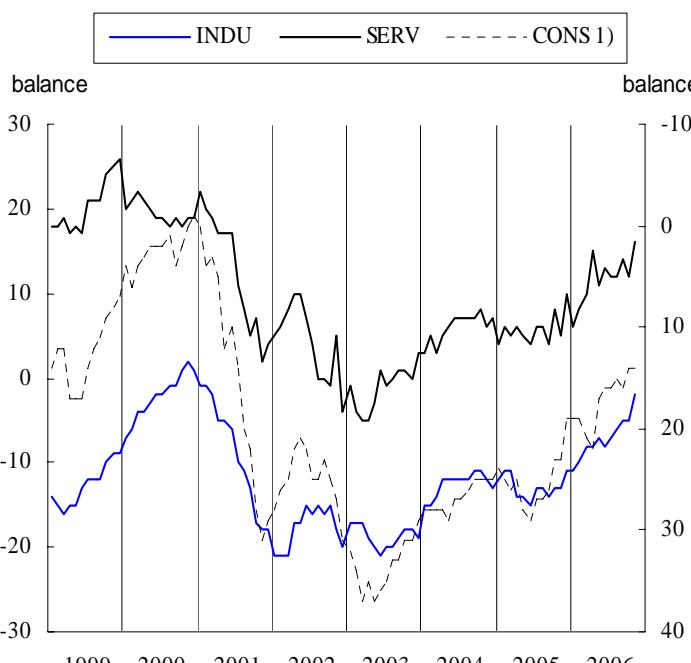

Employment, unemployment and price expectations in the EU

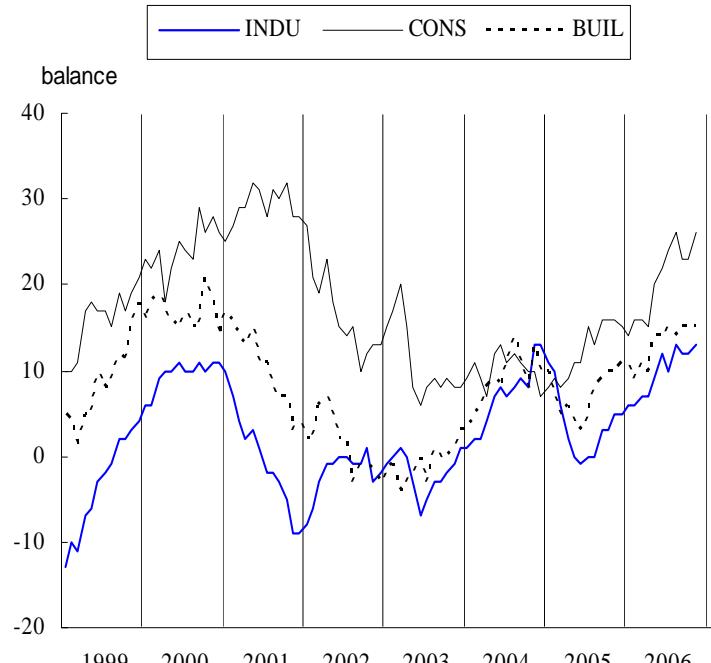

Employment expectations in the EU showed positive developments in November. Managers in both the industrial and the services sector became more optimistic, while consumers' unemployment expectations remained stable.

Concerning *future price* developments, both industrial managers and consumers expected higher price pressures. Meanwhile, construction managers' expectations remained unchanged compared with October.

Results of the World Economic Survey

In October 2006, the IFO institute, in co-operation with the European Commission, carried out the latest **World Economic Survey (WES)**, which evaluated national economic trends in 89 countries through interviews with 1,060 economic experts. This allows an up-to-date aggregate assessment of the economic situation prevailing around the world (see Graphs 9 to 11). The previous survey was conducted in July 2006.

For the fourth quarter in a row, a majority of experts worldwide considered that the *present economic situation* of the *world economy* had improved. The current level of confidence is close to the record-high levels observed six years ago. However, experts' *expectations for the next 6 months* again deteriorated, approaching the low levels recorded in 2001.

At the national level, experts in the EU continued to strongly improve their assessments of the *present economic situation*, whereas experts in the USA became less positive in their assessments. Views on the *economic situation in the next six months* once again worsened in the EU, while experts in the USA were less pessimistic than in the previous survey.

Export and imports expectations for the next 6 months remained on a downward trend worldwide. The levels of both indicators are currently close to their historical averages. *Import expectations* decreased considerably in the EU, while recovering somewhat in the USA. *Export expectations* decreased further in the EU and to a lesser extent in the USA.

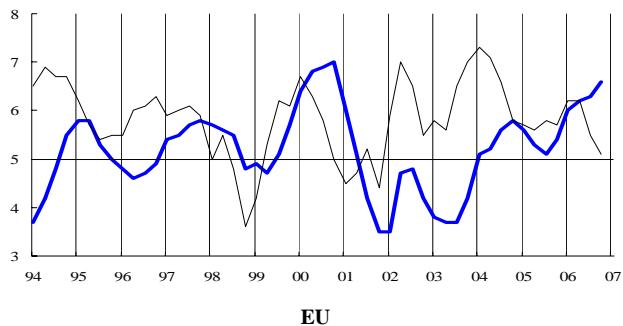

The expressed views on the *evaluation of currencies* remained broadly unchanged. Experts worldwide, as well as those in the EU, stated that the US dollar and the euro remain fairly close to their appropriate values. These perceptions that the currencies are properly valued have stabilised recently.

(*) The World Economic Survey is conducted by the IFO Institute on behalf of the European Commission 4 times per year (January, April, July, October) and is based on the answers of approximately 1.100 experts in more than 90 countries. The replies are 'graded': positive responses (+) receive a grade of 9, indifferent ones (=) a grade of 5, and negative ones (-) a grade of 1. Grades between 5 and 9 imply a preponderance of positive replies or increases, while grades between 1 and 5 indicate that negative replies or decreases dominate.

(a) The indicator is the average of the balances (%) for the questions on order-books and employment expectations.

(*) Due to the harmonisation of the reference period used in the questionnaire, the construction figures for Poland were shifted backwards by one month for the period Jul. 1993 to Aug. 2006.
