

BUSINESS AND CONSUMER SURVEY RESULTS

February 2007

Next publication of Business and Consumer Survey Results scheduled for 30 March 2007
http://ec.europa.eu/comm/economy_finance/indicators/businessandconsumersurveys_en.htm

Economic sentiment strengthens in both the EU and the euro area

The Economic Sentiment Indicator (ESI) increased in both the EU and the euro area in February. The indicator increased by 1.3 points in the EU and by 0.5 of a point in the euro area, to 112.0 and 109.7 respectively.

Developments in the confidence indicators of the various sectors were in general rather subdued. The EU registered increasing confidence in the industry sector and among consumers, while confidence in the services sector diminished. Confidence in the retail trade and the construction sectors remained unchanged. In the euro area, the increase in consumer confidence outweighed the decline in the retail trade and the construction sectors, while in the other sectors (industry and services) confidence remained stable. All sectoral confidence indicators in both the EU and the euro area remain above their historical averages.

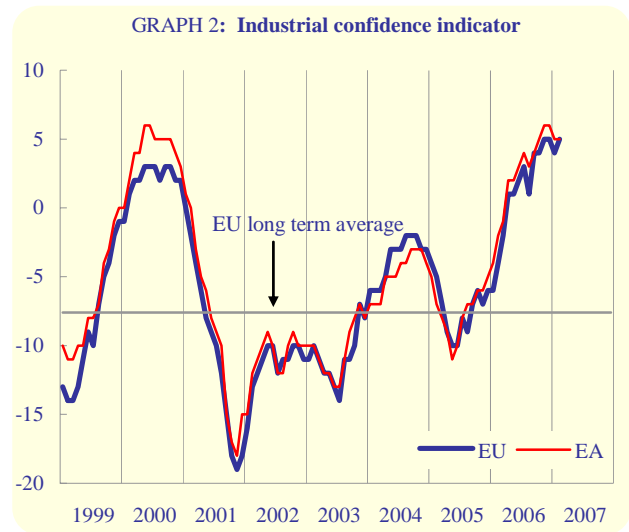

At the individual country level, the picture is mixed, but more than half of all countries showed an overall improvement in confidence. Among the large Member States, confidence improved in *France* (+0.8), *Italy* (+3.7), *Poland* (+5.0) and *the UK* (+5.3), while it decreased in *Germany* (-1.2) and *Spain* (-1.1).

Industrial confidence improved slightly in the EU and remained stable in the euro area

In February, the *industrial confidence* indicator increased in the EU, while it remained unchanged in the euro area. In both areas, the indicator remains at a very high level.

Managers' *production expectations* stayed constant in the EU, while they worsened in the euro area, although from a high level. The euro area decline in production expectations was offset by managers' assessment of *order books* and *stocks of finished products*, which improved. A similar improvement was also recorded for the EU as a whole.

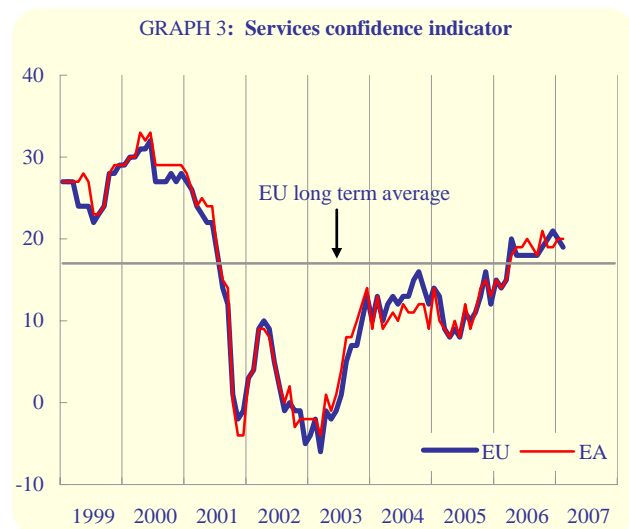

Most of the large Member States saw their respective industrial confidence indicator improve. Managers in *France* (+2), *Italy* (+2), *Poland* (+1) and *the UK* (+11) became more optimistic, whereas in *Germany* (-1) and in *Spain* (-2) they became less confident.

Services confidence broadly unchanged in the EU and the euro area

Since April 2006, the *services confidence indicator* in both the EU and the euro area has remained relatively stable above its long-term average. In February the indicator decreased marginally in the EU, while it was unchanged in the euro area.

The components of the confidence indicator showed diverse developments. In the EU managers turned more negative regarding the *recent and expected evolution of demand*, while their assessment of the *current business situation* remained stable. In the euro area the improvement in managers' assessment of *past and expected evolution of demand* was balanced by a perceived decline in the *current business situation*.

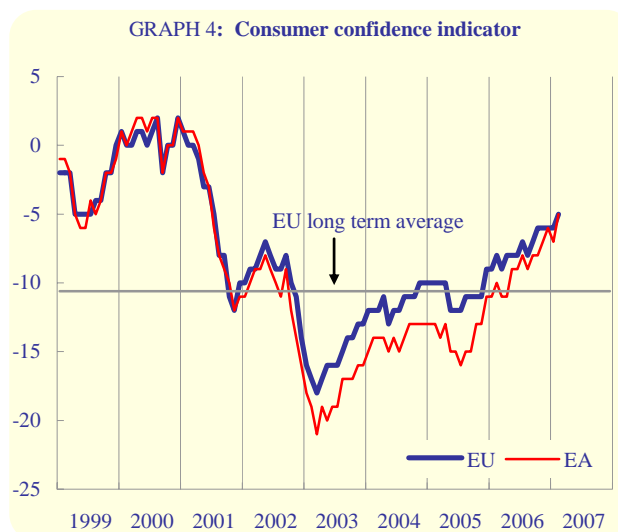

The services confidence indicator declined or was unchanged in almost all the large Member States. The indicator decreased in *Germany* (-4), *Spain* (-2), *France* (-2) and *the UK* (-3), and after a surge in the previous month, confidence in *Poland* remained unchanged. The only exception was *Italy*, where confidence rose by a remarkable 8 points.

Consumer confidence improves in both the EU and the euro area

In February, *consumer confidence* improved in both the EU and the euro area. In both areas, the indicators remained on an upward trend and stand well above their long-term averages.

Except for euro-area households' assessment of their *financial situation over the next 12 months*, which is expected to decline marginally, all underlying components improved in both areas. Consumers expected both the *general economic situation* as well as their opportunity to *save over the next 12 months* to improve. *Unemployment expectations* became significantly better, while households in the EU as a whole also expect their *financial situation* to improve over the next 12 months.

Even though the results are mixed at the country level, a clear majority of all countries showed an improvement in consumer confidence. Confidence in all the large Member States increased, notably in *Germany* (+3), *France* (+3) and *Poland* (+6), but also in *Spain* (+2), *Italy* (+1) and in *the UK* (+1).

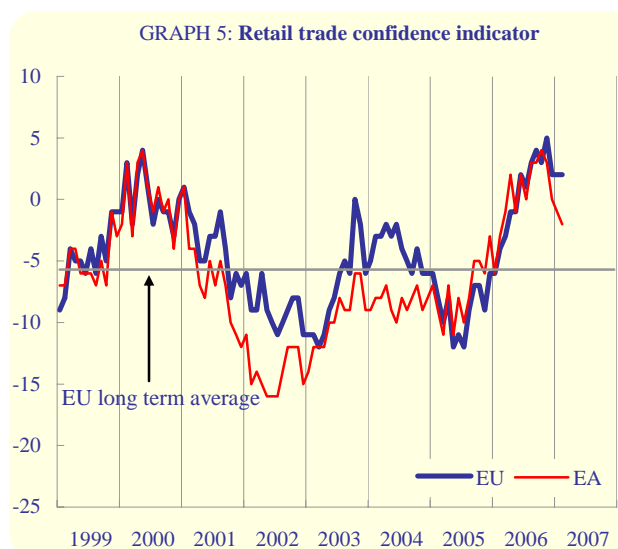

Retail confidence remains stable in the EU, but continues to weaken in the euro area

In the EU, the *retail confidence* indicator was unchanged in February for the third consecutive month. In the euro area retail confidence is returning to its long-term average. While it still remains above the long-term average, the gap between the peak reached in October 2006 and the average has more than halved.

The developments in the components of the retail confidence indicator were more or less the same in both areas. Retailers' assessment of the *current business situation* became slightly less optimistic, while their appraisal of the *volume of stocks* remained unchanged. In the EU, these developments were balanced by improvements in the *expected business situation*, but in the euro area, the strengthening of expectations was not enough to cancel out the negative effect of the *current business situation*.

The picture among the large Member States is quite diverse. Confidence among retailers improved in *Spain* (+2), *France* (+3), *Poland* (+2) and in *the UK* (+3), but worsened in *Germany* (-5) and *Italy* (-1).

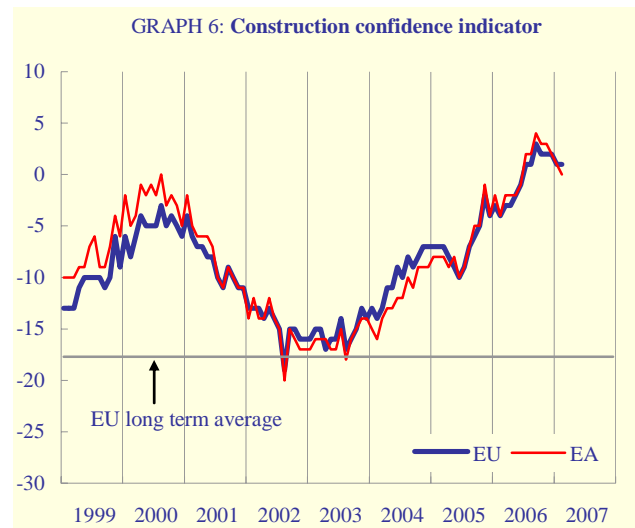

Confidence in the construction sector stays stable in the EU, but weakens in the euro area

For the EU, the *construction confidence* indicator did not change in February from the previous month. The euro area recorded its third consecutive decline. Both indicators still remain at very high levels, well above their long-term averages.

In both the EU and the euro area, managers' assessment of *order books* worsened slightly. The difference between the developments in the overall indicators of the two economic areas stem from the diverging views regarding *employment expectations*; while employment is expected to decline in the euro area, it is expected to hold up in the EU.

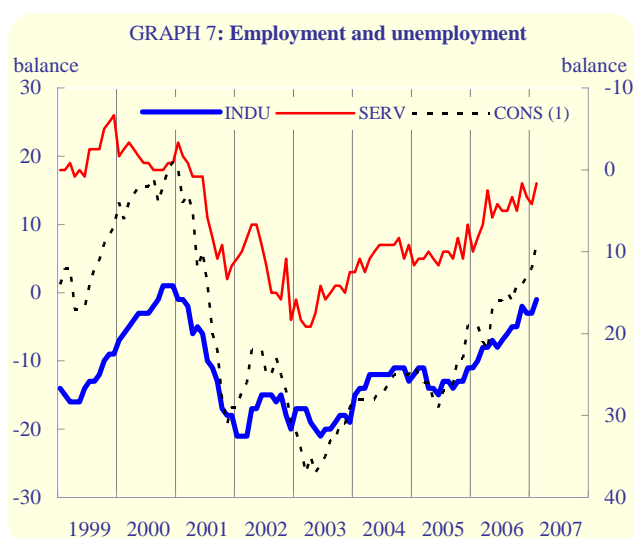

Among the large countries, construction managers became more confident in *Spain* (+1), *France* (+1) and *the UK* (+3), while confidence remained unchanged in *Italy* and *Poland*. In *Germany* (-6) construction confidence saw a sharp decline.

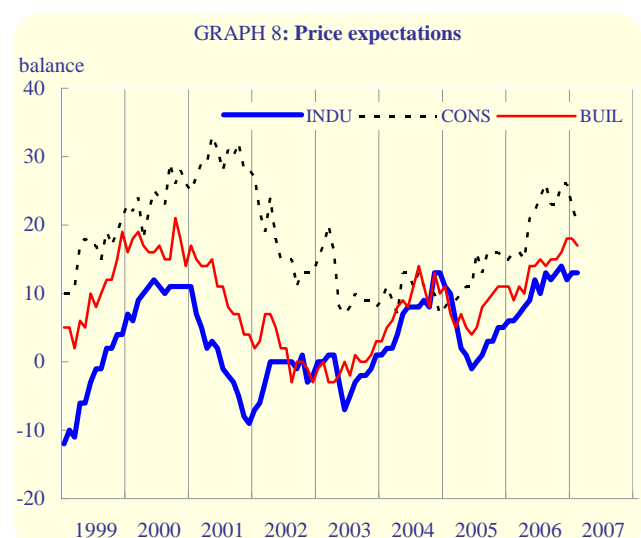

Employment, unemployment and price expectations in the EU

Employment and unemployment expectations in the EU showed similar developments in February. Compared with January, *employment expectations* for the next three months improved in both the manufacturing industry and the services sector. At the same time, consumers' *unemployment expectations* for the next 12 months improved.

Concerning *future price* developments, industrial managers expected price pressures to remain stable for the months ahead, while construction managers' expectations declined slightly compared with January. In line with managers' expectations, consumers expected price pressures to fall over the next 12 months.

1) Unemployment expectations (right-hand scale)

Results of the World Economic Survey

In January 2007, the IFO institute, in co-operation with the European Commission, carried out the latest **World Economic Survey (WES)**. Through interviews with 1,030 economic experts, the national economic trends in 90 countries were evaluated. This allows for an up-to-date aggregate assessment of the economic situation prevailing around the world (see Graphs 9 to 11). The previous survey was conducted in October of last year.

Concerning the *world economy*, a majority of experts worldwide considered that the *present economic situation* had improved for a sixth consecutive quarter. Experts' *expectations for the next 6 months* also turned more positive, after a couple of quarters with declining expectations during the second half of 2006.

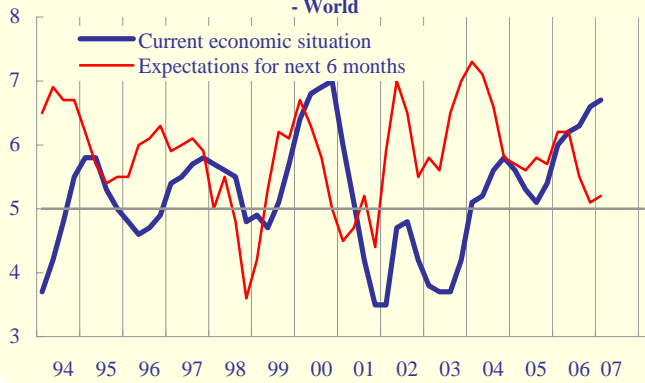

At the national level, experts in the USA adjusted their views on the present economic situation slightly upwards, while their expectations concerning the *economic situation in the next six months* remained stable. The assessments made by economic experts in the EU, concerning both the *present economic situation* and *expectations for the next 6 months*, have also become more optimistic, although the improvement in expectations come after a substantial drop that occurred during the second half of 2006.

The views on *trade expectations* coincided more or less between experts in the EU and in the USA. In the EU, *export expectations* declined slightly, while *import expectations* increased by a similar amount. US experts expect a similar increase in imports as their EU counterparts, but their export expectations also improved.

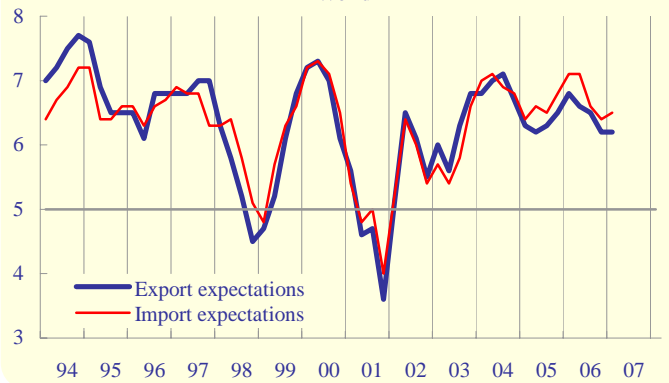

Views about the *evaluation of currencies* show that experts worldwide and those in the EU are diverging slightly. While experts worldwide feel that the US dollar is fairly close to its appropriate value, EU experts perceive it to be undervalued. The agreement is stronger concerning the euro, where experts in general consider the euro to be slightly overvalued, and increasingly so, vis-à-vis the average of the other currencies covered in the survey panel. EU experts, however, tend to believe on average that the euro is slightly less overvalued than experts in the rest of the world.

(*) The World Economic survey is conducted by the IFO Institute on behalf of the European Commission 4 times per year (January, April, July, October) and is based on the answers of approximately 1.100 experts in more than 90 countries. The replies are 'graded': positive responses (+) receive a grade of 9, indifferent ones (=) a grade of 5, and negative ones (-) a grade of 1. Grades between 5 and 9 imply a preponderance of positive replies or increases, while grades between 1 and 5 indicate that negative replies or decreases dominate.

(a) The indicator is the arithmetic average of the balances (%) of the questions on production expectations, order-books and stocks (the last with inverted sign).

(b) Highest figure is considered as minimum, lowest figure is considered as maximum.
