

BUSINESS AND CONSUMER SURVEY RESULTS

November 2007

Next publication of Business and Consumer Survey Results scheduled for 7 January 2008
http://ec.europa.eu/comm/economy_finance/indicators/businessandconsumersurveys_en.htm

Economic sentiment weakens further in both the EU and the euro area

In November, the Economic Sentiment Indicator (ESI) weakened further in both the EU and the euro area. It decreased by 2.0 points in the EU and by 1.2 points in the euro area, to 107.6 and 104.8 respectively; but still remains well above its long-term average in both areas.

The decrease in the sentiment indicator for both the EU and the euro area is mainly due to a significant drop in confidence in the *services* sector and slightly lower confidence in the *construction* sector and among *consumers*, while confidence improved in the *manufacturing* and the *retail trade* sectors.

At the individual country level, the picture is mixed, with an approximately equal number of countries reporting increases and decreases in sentiment. Among the large Member States, confidence deteriorated markedly in *Italy* (-4.3) and *the UK* (-5.0). The decrease was more muted in *Spain* (-0.2) and *France* (-0.4). In *Germany* (+0.1), economic sentiment remained virtually unchanged, while it increased slightly in *Poland* (+0.5).

Industrial confidence picks up slightly in both the EU and the euro area

Following four consecutive months of decline, the *industrial confidence* indicator recovered slightly in November, increasing by one point in both the EU and the euro area. The level of the indicator still remains far above its long-term average.

In the EU, both managers' *production expectations* and their assessment of *order books* increased slightly, while their views on the *stocks of finished products* deteriorated somewhat. In the euro area, the picture is similar with the exception of managers' assessment of *stocks of finished products*, which remained unchanged.

Among large EU Member States, industrial confidence increased in *Spain* (+5), *France* (+2) and *the UK* (+1). The industrial confidence indicator remained unchanged in *Germany* and *Poland*, and weakened slightly in *Italy* (-1).

Services confidence decreases significantly in both the EU and the euro area

The *services confidence indicator* declined markedly in both the EU and the euro area in November. As a result, confidence among managers in the services sector is now below its long-term average in both the EU and the euro area.

In both areas, the decline in the confidence indicator was the result of a worsening in all the underlying components. Managers' assessment of the *current business situation* decreased by three points in the EU and by five points in the euro area. Their appraisal of the *recent evolution of demand* dropped by eight and five points, respectively, while their *demand expectations* declined by four points in both regions.

At the country level, the results are mixed but the majority of countries reported decreases in sentiment in November. Among the large Member States, services confidence decreased dramatically in *Italy* (-17) and *the UK* (-9). Smaller decreases were recorded in *Germany* (-2), *Spain* (-5) and *France* (-1), while the indicator remained stable in *Poland*.

Consumer confidence declines further in both the EU and the euro area

In November, consumer confidence declined further in both the EU and the euro area. However, despite the decreases registered since May of this year, the confidence indicators in both areas remain above their long-term averages.

In both areas, consumers' expectations regarding the *general economic situation*, their *financial situation* and *unemployment over the next 12 months* deteriorated, while their views on their *savings over the next 12 months* remained unchanged in the EU and weakened slightly in the euro area.

At the individual country level, a majority of countries reported a decrease in confidence.

Among the large Member States, consumer confidence decreased by one point in *Germany*, *Spain* and *Italy*, and by two points in *the UK*. It deteriorated more markedly in *France* (-4), while it improved in *Poland* (+3).

Retail confidence increases further in both the EU and the euro area

In November, the *retail confidence* indicator increased by two points in the EU and by four points in the euro area.

Retailers' assessment of the *current business situation* and their *business expectations* picked up in both areas. Meanwhile, their appraisal of the *volume of stocks* remained stable in the EU and improved in the euro area.

At the country level, the results are fairly mixed but predominantly positive. Among the large Member States, retail confidence increased slightly in *Germany* (+1) and sharply in *France* (+8) and *Italy* (+12). At the same time, it remained stable in *Poland* and declined in *Spain* (-2) and *the UK* (-3).

Construction confidence declines further in both the EU and the euro area

The *construction confidence* indicator decreased further in November in both the EU and the euro area. However, despite the downward trend followed for roughly one year, the indicator remains at a historically high level.

In the EU, the decrease in the construction confidence was driven by a worsening of managers' *employment expectations* while their assessment of *order books* remained unchanged. Meanwhile, in the euro area both these components decreased in November.

Developments at the individual country level were fairly mixed. Among the large Member States, construction confidence weakened by one point in *France* and *Italy* and dropped more sizeably, by fourteen points, in *Spain*. On the other hand, it improved in *Germany* (+1), *Poland* (+2) and *the UK* (+3).

Employment, unemployment and price expectations in the EU

Employment expectations in the EU showed diverging developments in November. Compared to October, managers' *employment expectations for the next three months* remained unchanged in the industry sector, while they improved by two points in the services sector. At the same time, consumers' *unemployment expectations for the next 12 months* deteriorated by two points.

Concerning *future price* developments, the results in November give a coherent picture. Both construction and industry managers' selling-price expectations increased moderately, and consumers revised their price expectations upwards compared to October.

1) Unemployment expectations (right-hand scale)

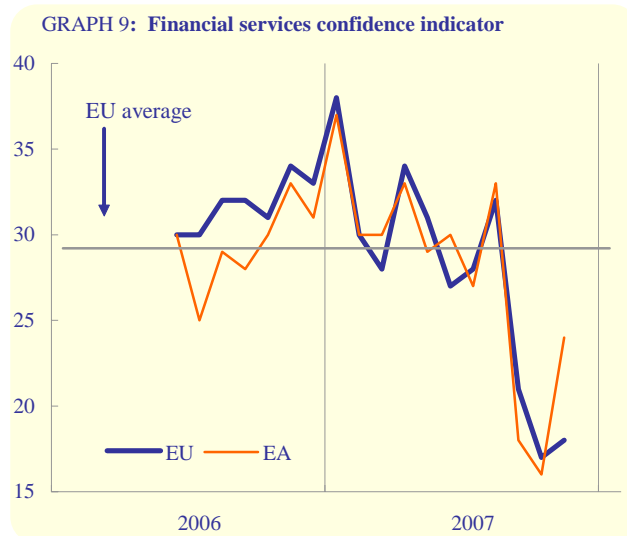

The financial services confidence indicator recovers in both the EU and the euro area

Following a sharp fall in the last two months, the *financial services confidence* indicator recovered somewhat in both the EU and the euro area in November. While it increased by only a subdued amount in the EU (+1), it rose by eight points in the euro area.

In the EU, the modest increase in the indicator was the net result of an improvement in managers' assessment of the *past evolution of demand* and a slight worsening in both their views on the *past business situation* and *expected evolution of demand*. By contrast, in the euro area, all three underlying components contributed to the improvement in the indicator, with a significant increase in managers' assessment of the *past evolution of demand*.

These results are derived from the new EU survey in the financial services sector, launched by the European Commission to further increase the sectoral coverage of its survey programme. In line with the schedule of the other business surveys, the survey has been carried out on a monthly basis since April 2006. The objective is to achieve representative results for the EU and the euro area as a whole, rather than for individual Member States.¹

¹ More information on the new survey is provided in the User Guide, available at http://ec.europa.eu/economy_finance/indicators/business_consumer_surveys/userguide_en.pdf

Results of the World Economic Survey

In October 2007, the IFO institute, in co-operation with the European Commission, carried out the latest **World Economic Survey (WES)**, evaluating the national economic trends in 91 countries through interviews with 1 024 economic experts. This allows an up-to-date aggregate assessment of the economic situation prevailing around the world (see Graphs 10 to 12). The previous survey was conducted in July 2007.

Concerning the *world economy*, a majority of experts worldwide considered that the very positive *present economic situation* had weakened slightly. Experts' *expectations for the next 6 months* have also worsened after having improved for two consecutive quarters, pointing to slightly negative world economic developments at the end of 2007 and the beginning of 2008.

At the national level, experts in the USA revised downwards their views on both the *current business situation* and the *expectations for the next 6 months*. Expectations are below the satisfactory mark and point to worsening conditions. The assessments made by economic experts in the EU, concerning both the *present economic situation* and *expectations for the next 6 months*, also worsened slightly. Views on the current economic situation continue to stay at very positive levels, though expectations are now below the satisfactory level.

Trade expectations differ slightly between experts in the EU and the USA. In the EU, both *export* and *import expectations* decreased in October, but remain positive. US experts also expect a decrease in *imports*, by even more than expected by their EU counterparts, but their *export expectations* were up significantly.

Views about the *evaluation of currencies* show that experts worldwide and in the EU have increasingly divergent views. While experts worldwide feel that the *US dollar* is fairly close to its appropriate value, EU experts perceive the dollar to be rather undervalued. They are more closely in agreement on the *euro*, with most experts considering the euro to be slightly overvalued vis-à-vis the average of the other currencies covered in the survey panel.

(*) The World Economic survey is conducted by the IFO Institute on behalf of the European Commission 4 times per year (January, April, July, October) and is based on the answers of approximately 1.100 experts in more than 90 countries. The replies are 'graded': positive responses (+) receive a grade of 9, indifferent ones (=) a grade of 5, and negative ones (-) a grade of 1. Grades between 5 and 9 imply a preponderance of positive replies or increases, while grades between 1 and 5 indicate that negative replies or decreases dominate.

(a) The indicator is the arithmetic average of the balances (%) of the questions on production expectations, order-books and stocks (the last with inverted sign).

(b) Highest figure is considered as a minimum, lowest figure is considered as a maximum.
