

BUSINESS AND CONSUMER SURVEY RESULTS

Graph 1: Economic sentiment indicator (s.a.)

source: European Commission services

June 2015: Economic Sentiment somewhat lower in both the euro area and the EU

In June, following the stable developments of May, the *Economic Sentiment Indicator* (ESI) decreased only marginally in the euro area (by 0.3 points to 103.5) and somewhat more markedly in the EU (by 0.9 points to 105.5).

Euro area developments

The mild decline of euro-area sentiment resulted from a slight decrease in confidence in industry and a more important drop in retail trade. By contrast, confidence increased in the construction sector and remained stable in services and among consumers. Amongst the largest euro-area economies, the ESI decreased only in Spain (-2.0), while it rose in Italy (+0.8) and the Netherlands (+0.4). In Germany (± 0) and France (-0.2) the indicator remained (broadly) unchanged.

Lower **industry confidence** (-0.4) resulted from managers' more pessimistic views on *expected production* and the *current level of overall order books*, while their assessment of *stocks of finished products* improved slightly. Of the questions not included in the confidence indicator, both the assessment of *past production* and managers' views on *export order books* worsened. **Services confidence** remained unchanged, resulting from managers' brighter views on *demand expectations* being offset by worsened views on the *past business situation*. Managers' assessment of *past demand* remained broadly stable. Also **Consumer confidence** remained stable, reflecting a marked improvement of the assessment of *future unemployment* which was counterbalanced by more negative views on the *future general economic situation* and *future savings*; consumers' expectations of their *financial situation* remained broadly unchanged. The important decrease in **retail trade confidence** (-2.6) reflected more negative views on all the three components of the indicator: managers' assessment of the *present and expected business situation* and of the adequacy of the *volume of stocks*. By contrast, the rise in **construction confidence** (+0.8) was driven by upward revisions in both managers' *employment expectations* and their assessment of the level of *order books*. The important improvement (+5.3) in **financial services confidence** (not included in the ESI) was fuelled by more positive appraisals of all three components (*past business situation*, *past demand* and *demand expectations*).

Employment plans saw an upward revision in construction and services, while they deteriorated markedly in retail trade and, to a lesser extent, industry. **Selling price expectations** increased in industry, services and retail trade and decreased only in construction. Also consumer price expectations increased in June.

EU developments

The more distinctive decrease of the headline indicator for the EU (-0.9) was mainly due to the deterioration in the largest non-euro area EU economy, the UK (-3.8), while the ESI remained broadly stable in Poland (-0.2). In line with euro-area developments, confidence dropped in retail trade and industry and improved in construction. By contrast, defying the flat euro-area developments, EU confidence increased among consumers and decreased markedly in the services sector. Finally, confidence in financial services rose significantly in line with the euro area. Employment expectations differed from the euro-area results in the services sector, with EU managers reporting a downward revision, and in the retail trade sector, where managers expected an increase. Price expectations were in line with those for the euro area except for industry managers and consumers, who expected prices to remain broadly unchanged.

(1) Unemployment expectations (right-hand scale)

In the tables: (s.a.) = seasonally adjusted, (n) = not seasonally adjusted, : = not available.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

The economic sentiment indicator is composed of the industrial confidence indicator (40%), the service confidence indicator (30%), the consumer confidence indicator (20%), the construction confidence indicator (5%), and the retail trade confidence indicator (5%). Its long term average (1990-2014) equals 100. The reported ESI average is based on this standardisation sample. All confidence indicators are balances.

The country weights have been updated in January 2015.

(a) Data are not seasonally adjusted.

(b) The confidence indicator is the arithmetic average of the balances (%) for the questions on business situation and past and expected evolution of demand.

(c) Component of the confidence indicator.

Information

The Directorate-General Financial and Economic Affairs (DG ECFIN) of the European Commission publishes the Business and Consumer Survey Results every month. The issues of January, April, July and October also include the quarterly survey results for the manufacturing industry and consumers. The April and November issues also include the investment survey results.

The data of the surveys is processed by DG ECFIN's Unit Economic situation, forecasts, business and consumer surveys (A4), Sector Business and consumer surveys and short-term forecast.
