Likely impact of FRIBS on the implementation of the BCS Programme
Katarzyna Walkowska, Central Statistical Office of Poland

New definitions proposed in the Framework Regulation Integrating Business Statistics (FRIBS) have been prepared by Eurostat in co-operation with Member States since 2011. This definitions will be implemented in business statistics but might also influence Business Tendency Surveys. In the paper there are indicated some issues connected with the choice of the statistical unit in BTS and its influence on sampling, collection of answers, weighting, comparability of data in time and with results of other surveys as well as access to business registers.
