
EMPHASIS is a multi-actor project that involves 21 partners from ten different EU Member States, including research institutes, universities, growers and small to medium-sized private companies from ten different EU Member States. The project aims to develop practical solutions to protect agriculture, forestry and public green from native and introduced threats to plant health, such as insect pests, pathogens and weeds.

EMPHASIS partners have developed a short survey [2] related to Pest Management to understand which are the most significant plant health threats to European agriculture and forestry. It will also identify which control and surveillance methods are currently used to deal with these threats. The information gathered through this survey will be very important in assisting the EMPHASIS researchers and partners to develop technologies that meet the demands of end-users and other stakeholders. The EMPHASIS project would appreciate your help in providing feedback and allowing the widest possible dissemination of the survey.

The survey questionnaire takes approximately 10 minutes to fill in and is available in EN, DE, FR, ES, IT. Please note that the survey is being disseminated through multiple channels; if you have received this survey link through different sources, you only need to fill it ONCE. The survey can be completed until 20 May 2016.

Please do not hesitate to contact the EMPHASIS project through Social Media, email or through the EMPHASIS website if you have any questions regarding the research, this survey, or the workshop they are holding in Brussels on the 1 June 2016.
