Innovation in the forest-based sector: from idea to practice

Estonia is a forest-rich country that has seen the impact of research and innovation reshaping its forest-and wood-based businesses over the past decades. Bringing together the main stakeholders of the forest-based sector, the FTP National Support Group of Estonia [1] (NSG Estonia) aims to increase the competitiveness of the sector through its research and development strategy, outlining research priorities of key importance to its member organizations.

As part of the flagship conference of the Estonian EU Council presidency "Nature-based Solutions: From Innovation to Common Use [2]", the FTP seminar is a unique opportunity to meet forestry experts, industry leaders and funding providers behind the transformation of the forest-based sector in Estonia; “Innovation in the forest-based sector: from idea to practice” will be held on the premises of Tallinn University, on 24 October 2017.

For more information visit the website [3] of the event.
