Geographical scope:

European Union

Keywords:

soil biodiversity

Soil management / functionality

soil health

Healthy soils contribute to stable agricultural yields, healthy produce, biodiversity and vital ecosystems. To highlight their importance, the seventh edition of EIP-AGRI Agrinnovation magazine, published in September 2020, puts healthy soils in the spotlight. This new edition of the yearly EIP-AGRI magazine zooms in on the EU Soil Mission “Caring for soils is caring for life”, and presents the latest on innovative projects from across Europe, exploring sustainable solutions for more soil health.

The magazine gives an update on EIP-AGRI Operational Groups and how they share their results in different ways – for more innovation and a bigger impact in the field. EIP-AGRI ‘soilmates’ share their views on challenges for the future and explain what they do to contribute to soil health. Aside from these themes, this edition offers inspiration on small farms, new entrants, rotational grazing, and forestry management. With news and updates from Greece, Hungary, Portugal, Finland and more, this seventh edition offers plenty of inspirational stories to dig into.
