Field trip: Algoculture and Aquaponics

Fieldtrip – Algoculture & Aquaponics

New products and new processes

Algoculture is a project of spirulina production under quality scheme. It is a question of quality of spirulina production « spirulina on farm» in small quantity in the shape of twig. The strategy is to create a new product in a way that sets it apart from the Asian competition.

Apiva is the first research and development program on aquaponics in France, this national project covers the integrated farming system development and more specifically on the interaction between a fish farming system and a vegetal unsoil-less culture.

- Presentation of the 2 projects with visit of the greenhouse (Pierre Foucard)
- Farm visit (Vincent Libeaut)
