

Green Paper "Confronting demographic change: a new solidarity between the generations"

id_request	288628
DT_CREATE	21/04/2005
Do you consent to the publication of your personal data/data relating to your organisation with the publication of your replies to the consultation?	Yes
Name	Tomáš Gabriel
E-mail address	idril@seznam.cz
Are you replying as an individual or an organisation?	Individual
Gender	Male
Age	15-24
Country of residence	CZ - Czech Republic
Do you take the view that the discussion of demographic trends and managing their impact should take place at European level? If so, what should be the objectives, and which policy areas are concerned?	- One objective should be elimination of those industry sectors which absorb a lot of workers while those sectors could (and should) be substituted by different industry that needs only "few" workers. For example: Build solar powerplants really massively and make big oversupply of cheap electric energy. It could decrease big number of working positions in: transportation, mining industry. Automatization in fabriques would be cheaper = next lost working places. This solar energetic network must be built by EU, not by exact states separately. Btw: this model is ecologically necessary too...

<p>Over many years, the Union has been making considerable efforts to achieve equality between men and women and has coordinated national social protection policies. How can a better work/life balance help to tackle the problems associated with demographic ageing? How can a more balanced distribution of household and family tasks between men and women be encouraged? Should the award of certain benefits or advantages (leave, etc.) be linked to an equal distribution of tasks between the sexes? How best to ensure an adequate income for both parents on parental leave? How can the availability of child care structures (crèches, nursery schools, etc.) and elderly care structures be improved by the public and private sectors? Can a reduced rate of VAT contribute to the development of care services? How can parents, in particular young parents, be encouraged to enter the labour market, have the career that they want and the number of children they want?</p>	<p>- For EU is having a child as valuable "product" as any other products. But this product can't be substituted. Mother should be employee of the state, while she is having a baby (3 years). But there must be one condition: Women could be (fully) employee of the state as mother only to her second child. After that age she would have only standard subsidy for mother. Full payment would be quite high to encourage young family to have baby and to support whole family: unemployed husband, mother and child.</p>
<p>The Thessaloniki European Council in June 2003 declared that an EU integration policy for immigrants should help to meet the new demographic and economic challenges currently facing the EU. This is the debate initiated by the Green Paper adopted last January.</p> <p>To what extent can immigration mitigate certain negative effects of demographic ageing? What policies should be developed for better integrating these migrants, in particular young people? How could Community instruments, in particular the legislative framework to combat discrimination, the structural funds and the Employment Strategy, contribute?</p>	<p>- no comment</p>

<p>European objectives have been laid down for the prevention of long-term youth unemployment, combating early school leaving and raising the level of initial training. The structural funds help to attain them at grass roots level. How can initial training and adult training schemes be improved? What can non-formal education and voluntary activities contribute? How can the structural funds and the instruments for achieving better access to the knowledge society contribute? How can the bridges between school and working life and the quality of young people's employment be improved? What role should social dialogue play? What can dialogue with civil society, in particular youth organisations, contribute</p>	<p>- There should be special courses (of much more things) available, not only schools.</p>
<p>How can Community policies contribute more to combating child poverty and poverty among single-parent families and to reducing the risk of poverty and exclusion among young people? What forms of solidarity can be fostered between young people and elderly people?</p>	<p>- Payment of young people should not be taxed for few years. - Solidarity can not be handled artificially... Just get more money to people working in social sector...</p>
<p>In order to foster the transition to a knowledge society, EU policies promote the modernisation of work organisation, the definition of lifelong learning strategies, the quality of the working environment and "active ageing", in particular raising the average retirement age. Demographic changes reinforce the importance of these policies, whilst raising new questions: How can the organisation of work be modernised, to take into account the specific needs of each age group? How can young couples' integration in working life be facilitated and how can we help them to find a balance between flexibility and security to bring up their children, to train and update their skills to meet the demands of the labour market? How can we enable older people to work more?</p>	<p>no comment</p>

<p>How can work organisation best be adapted to a new distribution between the generations, with fewer young people and more older workers?</p> <p>How can the various stakeholders in the Union contribute, in particular by way of social dialogue and civil society?</p>	<p>- I wrote something in first column: "- One objective should be elimination of those industry sectors which absorb a lot of workers while those sectors could (and should) be substituted by different industry that needs only "few" workers. For example: Build solar powerplants really massively and make big oversupply of cheap electric energy. It could decrease big number of working positions in: transportation, mining industry. Automatization in factories would be cheaper = next lost working places. This solar energetic network must be built by EU, not by exact states separately. Btw: this model is ecologically necessary too..." Old people need to rest... We need more free time to have children... So we have to decrease need of working...</p>
<p>The European coordination of retirement scheme reforms is promoting more flexible bridges between work and retirement. Should there be a statutory retirement age, or should flexible, gradual retirement be permitted? How can elderly people participate in economic and social life, e.g. through a combination of wages and pensions, new forms of employment (part-time, temporary) or other forms of financial incentive? How can activities employing elderly people in the voluntary sector and the social economy be developed? What should be the response to pensioner mobility between Member States, in particular with regard to social protection and health care? How should we be investing in health promotion and prevention so that the people of Europe continue to benefit from longer healthy life expectancy?</p>	<p>- Life must be healthier, not only longer...</p>

<p>The coordination of national social protection policies is due to be extended to long-term care for the elderly in 2006. How can this help to manage demographic change? The coordination of national social protection policies is due to be extended to long-term care for the elderly in 2006. How can this help to manage demographic change? In particular, should a distinction be drawn between retirement pensions and dependency allowances? How do we train the human resources needed and provide them with good quality jobs in a sector which is often characterised by low salaries and low qualifications? How do we arrive at a balanced distribution of care for the very old between families, social services and institutions? What can be done to help families? What can be done to support local care networks? And what can be done to reduce inequality between men and women when they reach retirement age? How can new technologies support older people?</p>	<p>- Dot tax social workers payment... - Make solar energetic system - get cheap energy - support basic functions of house at low cost and give some pension to old people to feed them</p>
<p>Should the European Union be promoting exchanges and regular (e.g. annual) analysis of demographic change and its impact on societies and all the policies concerned? Should the Union's financial instruments – particularly the structural funds – take better account of these changes? If so, how? How could European coordination of employment and social protection policies better take on board demographic change? How can European social dialogue contribute to the better management of demographic change? What role can civil society and civil dialogue with young people play? How can demographic change be made an integral part of all the Union's internal and external policies?</p>	<p>no comment</p>
<p>How did you perceive this questionnaire?</p>	<p>Expectations met</p>
