

Seen from the LAG's and from ELARD:

Networking a very important part of ENRD's work

Why is networking important:

It's a basic and powerful tool to development and innovation  
sharing information – not because you are obliged – but because you want to

Networking a part of the LEADER method  
and a result of the LEADER method

Networking nice and necessary

ENRD has managed to combine the two: nice and necessary  
for the future – it's important to check out: Why or how did they manage?

Probably because they had a good plan and some good tools – and the economy to support this  
but most important (seen from the outside)

They've had the right people!  
with the right attitude positive, helping, outgoing

ENRD has had the task to support **bottom up** using **top down**!  
and we have many examples of how difficult this is  
ENRD's work is an example of that it is possible – bottom up and top down can be combined!

What is important for the future:

**the people/personalities** –  
it's not a job anybody can do!

**the topics** –  
make them relevant for the LAG's everyday problems

**visibility** –  
join the national events (every year – to reach most people) – and this could be combined with:

**instruction** –  
in how to use the huge database, that's available on your website
