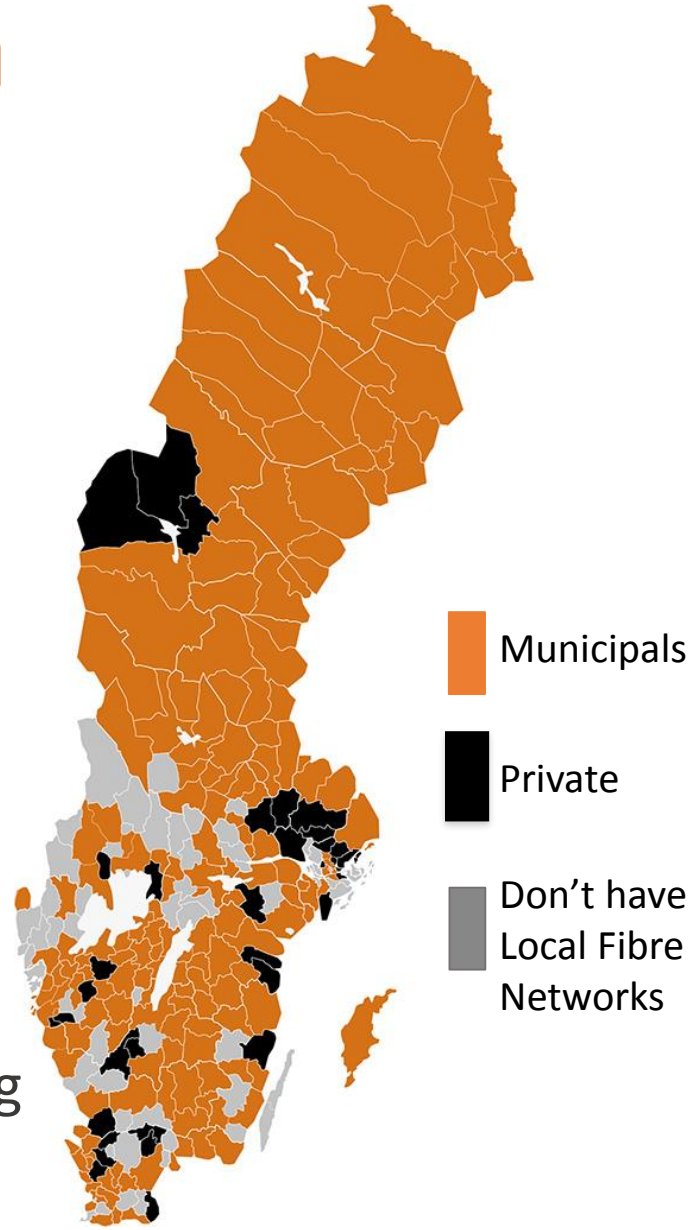
Local Fibre Networks in Sweden

SWEDISH LOCAL FIBRE ALLIANCE

- Alternative to the incumbent
- 93 % owned by the municipal;
  - 38 % as apart of the local utility company
  - 28 % as a stock company
  - 27 % as a direct administration
- Business conditions
- No discrimination – “open networks”
- Enable hundreds of different service providers
- App 50 % of the fibre access network
- Lively fibre and capacity market
- Common SLA, business agreements, systems and purchasing
- Increasing competition, new actors entered



Local fiber networks create

SWEDISH LOCAL FIBRE ALLIANCE

Increased competition
The local fiber networks are a prerequisite for a functioning broadband market.

Broadband for more
The local fibre networks are an important tool in the work to take a holistic approach to deployment in a municipality where both urban and rural are included.

Local development
A prosperous business is an important issue for the municipality. This work represents the city network an important tool to improve the local conditions to conduct business.

Open networks
The open network that owns the local fibre networks is the guarantor of "equal access to the network" and operator independent networks.

Perplexity for municipalities
There will be a rapid digitalization of municipal services in the coming years. This will provide new challenges for the municipalities and demands a comprehensive digital strategy.

Future smart communities
While today we have a strong focus on the expansion of broadband households will need to connect even things grow strongly in the coming years. This can include everything from lamp posts to bus stops.
